If you run STalker as an accessory, you can run the Kermit program included in the EXTRAS folder of the STalker disk as a program. Or just get Geneva and you can run them both however you want :-).

1802. Using a PTC1426/Falcon combo

Newsgroup: comp.sys.atari.st
Date: 1996-11-01 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <846932504_OASIS_@pcc-uky.campus.mci.net>
Source record: 134880

I just recently purchased a PTC1426 monitor and have a few questions. I'm using it with my Falcon 030, and the VGA monitor adaptor...My understanding is that the Falcon is smart enough to read the video port, and set what it can do accordingly. In my case, it reads, finds the VGA monitor adaptor/PTC combo and gives me VGA settings. Which also means, I can't run any of those great European demos which show off the Falcon so well, but alas, run in RGB mode..So here is my big question...if I buy the Multisynch Gizmo, will it fool the PTC1426 /Falcon into thinking an RGB monitor is attached and allow RGB stuff to run? Thanks in advance for any info...! :)

I have to sell:
2-1040 STFs
1-Megafile 30 hard drive
1-SM 124 mono monitor
1-SC 1224 colour monitor
1-Beetle mouse that will go with one of the computers.

I live close to Winnipeg Manitoba, Canada.
I need to know what people are willing to pay for these Items and if
there are any interested parties.

Also is there an Atari users group in Winnipeg.
somebody please contact me.

I got a program called resfool.<lzh,zip,arc> from the UMich archive. It's supposed to fool the computer into using RGB mode anyway. I've not tried it yet, but you might not even need the Gizmo... of course, many demos don't appreciate ANYTHING being loaded before them.

Just thought I'd throw that in the kettle.

>doing this.

If you're lucky, it's "chip creep," a problem caused by thermal expansion and contraction of the chips and sockets.

Open the machine (removing screws from /square/ holes only!) and remove the metal RFI shield. Locate all of the socketed chips (some are probably under the power supply and/or floppy drive). Make sure the computer is resting on a flat, solid surface and push down firmly on each socketed chip until it "seats" (you'll feel a slight crunch). The PLCC socketed chips (square sockets with pins all round) need to be squeezed together as well. Use finger pressure only for this, any pliers are likely to break the sockets or the chips in them.

If this doesn't do it, check the power supply for correct voltages under load. The +5v lead must not drop below 4.8v or rise above 5.5v; the +12v lead can safely range from about 11.5v to 12.5v.

Good luck!

>the computer usually boots anyway (from a ROM chip??)

yes.

>but it is no longer doing this.

try booting with a blank formatted floppy with nothing on it. One of
my older machines would sometimes boot far enough to display the
desktop but no floppy icons. The blank floppy cured this.

>When trying to boot from a floppy the UIS_11 loading msg appears on
>the screen, followed by the Genmouse msg. The screen then flicks back
>to white, repeats this process

this indicates a software problem - conflicting boot programs.

>and then goes black.

this could be the result of the above software problem or hardware.

>I recently downloaded some accs and prgs from the net (Slectric,
>Chameleon, MKM_II) so I don't know if these could have caused this
>problem

possibly.

>or whether the ST has finally died.

possibly.

>If anyone can offer me any insights, I would be most grateful as I
>have a deadline looming and will habe to go out and buy a new computer
>if this can't be fixed

It could be software or hardware, difficult to narrow down from your
description. However, in light of it refusing to boot with no disk I
would err slightly on the side of a hardware fault.

There are 3 typical causes:

1) Disk drive fault - cheap and easy to fix with all those
unwanted PC 720K drives to be had.

2) Escaping chips. Over time, the repeated warming and cooling of socketed chips can cause them to work their way out. Open the machine and push them all firmly.

3) Power Supply. One of the problems is they don't run cool enough and the solder joints can heat and become dry. This usually manifests itself as though you just hit the reset button. Initially, it does it once in a while, getting more frequent. Running a soldering iron over the joints can bring them back to life for a while. It's switched-mode. If you do not know the implications of that then find someone who does, to look at it - they can be very dangerous!

Newsgroups: comp.sys.atari.st

p > Here is my question: is it possible to use a recent hard disk
p > drive, found in any computer shop (and built essentially for
p > PCs or Mac's) on a Atari 1040 STF? And how to do it? And if
p > not, where the hell could I buy a hard disk drive compatible
p > with my Atari 1040?

It's very possible - in your case, all you'll need is a plug-in
host adaptor with the appropriate software. The best known packages
include the ICD Link II, the TopLink, and the Link '96. Almost any
pre-built SCSI-based hard drive system should work - and with
additional driver software, you can connect any SCSI CD-ROM drive to
your system as well...

There is a text file, MINT.TXT, included on the Geneva 004 Extras disk
which describes how to set it up.

To be honest with you, Geneva 004 does not get along perfectly with MiNT
(though it does work). Geneva 005, which will be out as a patch program
very soon, works much better with it. Check http://www.pair.com/gribnif
for updates.

Hi musik@tcsn.net, on 31 Oct 96 you wrote:

m> What would *you* buy, considering the future of Atari stuff is very
m> bleak??

Why not just get an old SCSI-1 device, preferably a Seagate as they always seem to work, and plug it in where your duff drive is at the moment?

As it will be an end-of-line or stripped-out item it should be very cheap (around 20 cents/Mb).

There is a limit on how big your deskicon.rsc file can be...I think
its around 64k...(not sure exactly) One of the first things I would
do is replace your deskicon.rsc and newdesk.inf file with the stock
ones that came with TOS 2.06 just in case your files have became
corrupted...When they become corrupted, you can get that error
message...Good luck! :)

1826. 250 meg floppy tape drive

Newsgroup: comp.sys.atari.st
Date: 1996-11-01 00:00:00 UTC
From: jim petit <jpetit1@airmail.net>
Message-ID: <327ABFFF.4C05@airmail.net>
Source record: 134904

Has anyone tried to use one of the 250 meg floppy tape drives on one of the older stf's or mega st's? I have hooked up several of them on pc's and it isn't much of a problem. The ones I have used don't have any setting for drive select, the software does a poll on the floppy cable to read the drive itself. I would like to try sticking one in an external floppy case, but don't have any idea if any software would be able to read it. Any ideas?

Thanks.....j

>Thanks for any help.

Hi Phantom! Hope things are going well with you...I'm currently using a PTC1426 Atari monitor with my Falcon and it makes a good solid VGA style monitor for the Falcon but you will -not- be able to run RGB stuff (like Eurodemos) with it...contact Systems For Tomorrow at sft@sound.net and tell them you want to be put on the waiting list for the Nec 3D...it will cost you around $200.00 and it does VGA (working with many Screenblaster modes) RGB stuff (it does synch down to 15.75), and has a nice dot pitch, auto-sizing, etc,...it seems to be one of the best all-around monitors for the Falcon...I'm already on their list, and its the monitor I'm going to get, once one is available...Good luck! :)

>Thanks for everything!
>Nico (Geneva, Switzerland)
>petitat2@sc2a.unige.ch
All hard drives are not created equal!
Some are more equal than others, like SCSI.
A hard drive is not built for PC's or MAC's, it is built to either IDE (EIDE)
or SCSI specs.
Unless you have a Falcon, forget the IDE or EIDE.
If it is a SCSI disk (faster, more data throughput) then you are in luck.
You need:
1)ACSI-DMA/SCSI adaptor[LinkII, AdSCSI, ...)
2)SCSI cable
3)power supply for hard drive
4)SCSI hard drive
5)case for drive[and power supply?]
6)AHDI-HDDriver-ICD boot software

you can buy kits which include case, power supply, ACSI-SCSI.
good luck.bonne chance

>what exactly I did, it seemed relatively simple. When I have time, I'll
>go through the software to see if I can jog my memory.

I'd be interested in finding out how you did it because I'm having nothing
but trouble. I keep getting bombs when booting (especially when I do a warm
reboot instead of a cold one), or I only get it to boot from floppy disk
when CBHD is installed.
I'm really getting fed up now! If it wasn't that ICD's driver had problems
with MiNT I'd certainly continue using it- it's dead easy to install and
works every time.

Perhaps I should write to the author of CBHD and ask. I'll see if the email
address is in the "readme" files that came with it.

PS. When replying to a posting could you please insert blank lines between
the quote and your reply? It makes it a lot easier to read than a whole
chunk of text with replies/quotes and no blanks between to differentiate
between the two.

>compatibility with these 3 emulators ???

The rom card does nothing but allow you to plug in an actual ST rom.
You could use an ST rom image and achieve the same effect.
Also the ROM card only works with Gemulator.

What have you been testing? Most GEM and TOS programs should work with
Gemulator. However, they biggest incompatibility would come from
games, especially copy-protected ones. If you've been testing games, then
you should expect to see a low compatibility ratio.

>
> this indicates a software problem - conflicting boot programs.
>
>> and then goes black.

In an ST with 6 ROMS containing the OS only 2 of them are needed for booting the computer (the low and hi ROMS of the first ROM bank). If the computer is booting from disks and displaying messages most of the computer is working. If the system crashes when the GEM desktop is supposed to come up there is probably some thing wrong (bad contacts) with the ROMS containing GEM (the other four ROMS). Try pressing the into their sockets.

Conflicting bootprograms or a virus is a possibility too, but if the GEM desktop won't appear when booting without a disk excludes this possibility. There might be an other hardware problem too. Try to boot a crew demo, like 'Darkside of the spoon' (I always use that one), 'Syntax Terror demo' or something like that. To boot and work, those demos only need the first two ROM chips to be present. If susch a demo works fine, you can be sure the whole system is OK, exept for the higher ROM parts containing GEM and some parts of the MIDI, RS232, parallel and ACSI interface (but those parts can be tested from the GEM desktop).

Hope this helps, Hans

1838. Help! How do I install CBHD harddisk driver?

Newsgroup: comp.sys.atari.st
Date: 1996-11-02 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <327a9f08131ab51@sn.no>
Source record: 134816

I'm really fed up now with all this harddisk mess!

See, I've been using ICD's software (v6.5.5. driver) with my Link II interface up till now, but I got problems when I installed MiNT on my system, so I'm in the market for a new driver.

So I've tried changing over to CBHD's driver which has given me nothing but problems. Perhaps I'm doing it the wrong way since there's no "de-install" function for ICD's driver (none that I've seen anyway), so I'd like to start from scratch just to be sure that I don't mess up my harddisk big-time!

Since this means transferring all data over to another harddisk and re-formatting/re-installing everything again on my current drive I want to know that I'm doing it right. Unfortunately all docs are in German for CBHD :-((didn't they expect any non-German/non-German speaking to use it?)

So can someone please give me directions on what to do in order to make a "clean" installment *that works*!
If I didn't want to have MiNT installed on my system I could have stuck to my ICD driver (which has worked flawlessly and is really easy to install)- I've never had any problems with it. Too bad it's not compatible with MiNT :-(

From: hallvart@sn.no
Message-ID: <327a9f08131b5d2@sn.no>
Source record: 134817

Has anyone else been alerted with the message "system out of memory" when
you've installed several programs/icons/paths etc. in TOS 2.06's
"Newdesk.inf" file?

Is there a limit in size to how big the setup file can be?
It's not that I have such an outrageous number of files assigned or icons.
In fact I just use icons on the desktop and the file listings as text...

Is there a way to allocate more memory for this function? I should have
enough RAM as my STE is expanded to 4 Mbytes.

From: hallvart@sn.no
Message-ID: <327a9f0e131fbb8@sn.no>
Source record: 134818

I've had this idea for a long time, but I've never found a program which does this. Let me explain.

The scenario.... you've got a huge harddisk with loads of programs and files and you want to access a certain program.
In order to do this you might have to open several folders/sub-folders to get to that program just to double-clik it.

Now, I've been using the "Selectric" file-selector for some time and find it an extremely useful tool to have (I don't understand how I was able to live without it in the past). As I've preset certain well-used paths I can access files/programs with great ease, so why not built a "program launcher" into a file selector? Would it be possible.

Like where you select a file in "Selectric" and then press copy/move/delete/show info or whatever there could be an additional "run program"...

>dare say that there is, but I've never paid much attention, not having a fax
>facility to make use of...

I use Junior Office which IMHO is the bees knees. But I would say that,
I've never used anything else. You may have problems setting it up but
this is only due to the instructions being a little suspect. For anybody
that may have had problems they should remove the ATD command from their
dial string, this is sent to the modem automatially and adding it will only
confuse the modem.

For cheep, cheerful and easy to use software you can't go far wrong.

I have an Atari Stacey I'm selling for Parts, to be sold for parts. Not to be repaired. If you wan't to try to buy it to try to repair it? I'd advise against it. It is one of the first ones off the Assembly Line, without batteries. It's Switching Power Supply has been tested & works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold. Unless, of course, It's sold with the Stacey. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

Okay, here is basically, what I do with Oasis v1.35 when I logon to my
provider:

ATZ
ATDT 8866086

CONNECT 2400 (I'm using an older 2400 baud modem, 28,800 on its way!)

Login: thechyld.pcc-uky
Password: mypassword

(at this point my provider gives you a menu where you can choose
a FAQ, report on your bill, Slip or PPP--its not really Slip
though, I called and asked, its just on the menu)

Option: P (for PPP)

then Oasis sends ppp mru=1500 idle=300

and I'm on the Net...

Thanks in advance for any help you can give me...I appreciate it! :)

1847. Atari things for sale!

Newsgroup: comp.sys.atari.st
Date: 1996-11-02 00:00:00 UTC
From: wentzel@bonaire.ccit.arizona.edu
Message-ID: <55f0ln$jcq@news.ccit.arizona.edu>
Source record: 134825

Atari things for sale!

My Atari 1040 ST was stolen a couple years ago, and now I want to sell my Atari books, manuals, and software. If you're interested in any of this stuff, drop me an e-mail at wentzel@aruba.ccit.arizona.edu. If you think my price is way out of line, make an offer. Prices include postage to anywhere in the U.S.

****
Atari 1040ST manuals and original software that came with the computer (sold as a package):

1040 ST computer owner's manual, copyright 1986, 90 pages, spiral-bound
Atari SC1224 color monitor owner's manual (12 pages)
Atari SF314 microfloppy disk drive DS/DD owner's manual (8 pages)
Atari Logo Sourcebook, copyright 1985, 85 pages, spiral-bound
Atari ST Basic Sourcebook and Tutorial, copyright 1986, 240 pages, spiral-bound
Neochrome v 0.5 manual, copyright 1985, 4 pages
1st Word Word Processor manual, copyright 1986, 40 pages
2 original program disks (Language Disk and 1st-Word)

$30 for all of the above

****
Books:

Atari ST Internals: The authoritative insider's guide (#2 in a series)
by K. Gerits, L. Englisch, R. Bruckmann
A Data Becker book published by Abacus Software, 1985
$20.00 (out of print)

Atari ST GEM Programmer's Reference: The complete guide to programming the ST using the Graphics Environment Manager (#3 in a series)
by Norbert Szczepanowski and Bernd Gunther
A Data Becker book published by Abacus Software, 1985 (2nd printing)
$20.00 (out of print)

Atari ST Machine Language: Complete introduction to machine/assembly language on the Atari ST (#4 in a series)
by B. grohmann, P. Seidler, and H. Slibar
A Data Becker book published by Abacus Software, 1985
$20.00 (out of print)

Compute!'s ST Programmer's Guide
by O. Cowper, D. Florance, T. Heimarck, J. Krause, G. Miller, K. Mykytyn, P. Nelson, and T. Victor

Compute! Publications, Inc., 1986
(covers ST BASIC, Logo, GEM and TOS)
$12.00

M68000 16/32-bit Microprocessor Programmer's Reference Manual, 4th Edition
Prentice-Hall, Inc., 1984
$5.00

1 issue of START magazine, Volume 3, #7, February 1989 (no disk)
$2.00

****
Software:

HiSoft DevpacST Assembler/Debugger v. 0.91 & 1.00.2
(a suite of programs to help write and debug 68000 assembler programs)
copyright 1985
40 page manual and original disk
$15.00

Megamax C Language Development System for the Atari ST v. 1.0
450 page manual and 2 original disks
$25.00

ST Software Development Kit, copyright 1985
1600 pages of manuals in two 3-ring binders, and 5 disks (MicroEMACs, Resource Construction Set, Linker Disk, Utilities Disk, Compiler Disk)
$35.00

Holmes & Duckworth micronomists Atari ST Tool Box, Volume 1
1 disk, contains disk file/sector editor, memory editor, fast format and copy, deleted file recovery, and directory print)
$8.00

Aegis Animator ST, copyright 1986
(full color animation software)
manual and 1 disk, $8.00

1849. TTP program help

Newsgroup: comp.sys.atari.st
Date: 1996-11-02 00:00:00 UTC
From: micah harvey <mcharvey@earthlink.net>
Message-ID: <327B37FA.7E87@earthlink.net>
Source record: 134827

probably an extremely basic question, forgive me. i'm getting used to
pointing and clicking too much.
are there basic commands common to ttp programs? i launch the ttp, and
don't type anything in the command line. command instructions flash by
at a few hundred miles an hour, and then i'm dumped back to the desktop.
how do i pause the screen output so i can read the directions?

thanks for any help,
M.C. Harvey

1850. FOR SALE: A HAUNTING 1040ST SYSTEM

Newsgroup: comp.sys.atari.st

Hallvard,

>If I didn't want to have MiNT installed on my system I could have stuck to
>my ICD driver (which has worked flawlessly and is really easy to install)-
>I've never had any problems with it. Too bad it's not compatible with MiNT

What types of problem(s) do you have with ICD 6.4.4 and MiNT? I've spent
a big of time with MiNT 1.12 and 1.12.5 and haven't seen any
incompatibilities?

Thanks,

Pat

1854. AtarIRC configuration

Newsgroup: comp.sys.atari.st
Date: 1996-11-02 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <847030586_OASIS_@husbands.demon.co.uk>
Source record: 134832

Can anyone help me in getting the AtarIRC configured up?

I'm typing /config and have no problems with most of the stuff, but I can't seem to grasp how I'm supposed to enter in the server information.

It comes up with [format: server port] IRC server # 1 of 20 > and then I have to enter something. What do I type here for eg. dismayl.demon.co.uk on port 6665? I've entered the name of the server then a space then the port, but when I go to /connect and it brings up the default server I get an error saying:

resolving dismayl.demon.co.uk 6665 resolve (dismayl.demon.co.uk 6665)=
bad format in domain name or dotted decimal.

Someone put me right, please!

Thanks all.

1855. CAB.OVL (v1.20) problems

Newsgroup: comp.sys.atari.st
Date: 1996-11-02 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <847030940_OASIS_@husbands.demon.co.uk>
Source record: 134833

Hi all.

I've just tried upgrading my cab.ovl to v1.20 from v1.18 and whilst it seems to work OK most of the time, when I'm off line and try to access pages from my cache, I get a 'network down' message and a blank screen ie. it can't find the pages. This is with STik enabled and disabled.

I go back to v1.18 and presto! there are the pages at my beck and call.

I've seen this problem mentioned here before, but did anyone find an answer to it?

Hope someone can help! Thanks in advance!

Simon

From: marcl@NL.net
Message-ID: <55fpcu$dt1@solair1.inter.NL.net>
Source record: 134834

Martin.Byttebier@ping.be (Martin Byttebier) writes:

>Hoi,

>I have the opportunity to buy a Spectre Mac emulator.
Make sure there are 2 Mac-ROM-chips in it.

>What kind of soft can I run with the Spectre?
Most s/w that runs under the old Mac OS v. 6.0.5 or lower. However,
some software that makes direct hardware calls doesn't run, although many
of these calls are intercepted by the Spectre-software.
Also Mac-OS 7.0 does
NOT run properly under Spectre. The author, Dave Small, never published
the v. 7.0 update. As far as I know he went broke.

>Is it possible to use Mac Internet prog's?
No.
(Well, of course with a normal communication programm you can enter the
net with the text-based LYNX-protocol).

>I have a TT030 with 4+16 mb Ram. Can the Spectre use the TT-Tam or is
>it restricted to use the ST-RAM?
Don't know, I never tried a TT.

Another web browser for the ST??
Perhaps you could upload the old copy you have to some FTP site so the rest
of us (who can't access that BBS) can have a go at it?
By the way, will it only work with the Falcy?

ICD is deffinitely better than the Atari stuff but, HDDriver is even
better than both, it should be available from whoever your normal
Atari dealer is.

1859. New POT OF GOLD with Lynx/Gameboy/Atari stuff!

Newsgroup: comp.sys.atari.st
Date: 1996-11-02 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.110296.172714.21@wxs4-11.worldaccess.nl>
Source record: 134837

This is the November 2nd version of the list of Atari stuff that I have
for sale. Some of the demos have been made cheaper, and a few Lynx/Gameboy
cartridges have been added.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you may not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
+Arkanoid (Imagine/Ocean)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
+Bubble Bobble (disk will handled, was my absolute fave game) (SOLD)
+Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
(SOLD)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
Dragonflight (Thalion, 2 disks, double-sided drive required) (SOLD)
+Dungeon Master (SOLD)
+Enchanted Land (Thalion) (SOLD)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Gods (superb game, two disks, by Bitmap Brothers)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
+Gridrunner by Llamasoft, excellent game by Jeff Minter (SOLD)
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all)
Jambala, the Seven Gates of (Thalion, DS disk version)
+James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
(SOLD)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)

The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect printer to
get it to work, does not work on Falcon, alas)
+Lemmings (need I say more?)
+Oh No! More Lemmings (totally addictive)
+Lemmings 2 (more addiction)
+Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
+Little Computer People (Activision, really cute game) (SOLD)
+Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
+Nebulus (by John Phillips, excellent game)
+Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game) (SOLD)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
+Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
+Rick Dangerous II (also a fave!)
The Sentinel (legendary Firebird game with 10000 levels or whatever) (SOLD)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game!)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly) (SOLD)
+Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)
+Wings of Death (truly great 2 disk shoot-em-up, by Thalion, several levels have graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, the latest version 2 ** (with manual) (SOLD)
Diamond Back 3 ** (with manual) (SOLD)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual) (SOLD)
K-Rhyme (rhyming accessory) * (SOLD)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks) (SOLD)
Spectrum 512 * (512 colour drawing program, ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are

"STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI CD ROM

I also have for sale the Suzy B's Software Treasury, a double CD ROM with over 1000 Kb of Atari
stuff, too much to even begin to summarize here. It's yours for 15 British pounds (or the
equivalent), including postage (2.5 British pounds - or equivalent - extra in case you live
outside Europe).

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Gauntlet
Ninja Gaiden
Rampage
Robosquash
Todd's Adventures in Slimeworld

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

>
> thanks for any help,
>

For those TTP programs that are not friendly enough to stop on their
own, just use [control]-S and [control]-Q to pause/restart the display.
If you are using TOS 1.04 or higher, (or an alternative desktop like
TeraDesk, Thing, Gemini, etc,...) then I recommend that you install the
TTP program as an application...you do this from the drop-down menu
bar...you can "associate" a program extension with a program so that
it acts on it...for example, I have zipjr.ttp set up so that when I
double-click on any file that ends in *.ZIP, it is automatically
decompressed right wherever it is...This ability of TOS/GEM is a very
strong point in its ease-of-use IMHO...Have fun! :)

Not quite the same thing, but HotWire allows you to select and run a program
using any file selector.

I too have the same gripes about using a TTP program which is a big leap backward from the friendly GEM interface. Usually, '-h' is the command for displaying the commands to use.

Geneva has a program that can run TTP programs and pause the display, even in the free demo I have.

Of course, I would love to see a program that'll let you put TTP commands in a customize menu and let you launch it in a window and absolutly pause when finish. :)

There's an accessory called "One-Jack" that was on a coverdisk of ST
Format a while back. It lets you run programs from a menu. But unless
you have a multitasking setup, you have to run the accessory from a
special program included to run that program using GEM.

Try this script (copy it in your chatfile) :

```
ABORT 'NO DIALTONE'
ABORT 'NO CARRIER'
ABORT BUSY
ABORT WAIT
ABORT DELAYED
ABORT FORBIDDEN
"" atz
OK atdt8866086
CONNECT ""
Login: thechyld.ppc-uky
word: yourpassword
Option: P
idle
```

Don't forget to put a space at the end of each line (I think it's important).

Good luck !

Hi, I don't think that saying Cab+stik=shite whill resolve any
problem.
1) because it's wrong.
2) because it's way too offensive.
CAb and Stik work really great, I mean really great.
If your provider has true Slip protocol, and you got he correct tcp
parameter from them, it should work no problem.
I would say one thing. Last week I was at my friend's house. He has a
P90 a 28.8 modem and Netscape with PPP protocol. And I can tell you
that the speed wasn't amazingly fast. IN fact it was pretty slow.
I don't even talk about my cousins PC. They are on AOL with PPP,
same modem as me, and their setup run 3 times slower than Stik and
Cab.
The only advantage I see is that they are able to run Java scripts.
Also, try to install Netscape on a floppy disk.

: Perhaps you could upload the old copy you have to some FTP site...

I saw a copy of this a long time ago. It was an alpha version or something like that that had leaked out. I couldn't get it to work, and then CAB gave out so I didn't need to fiddle with it any more. I heard that the chaps working on it gave up on it since CAB came out. I could be wrong, but I certainly have seen no more of it for almost two years now.

OXO does have a web browser that should be coming out soon, to compete with CAB. And the OASIS guys are still planning out to come out with a web browser to go along with their package.

At this point, if they get PPP built into STiK, StiK/CAB will be pretty good. CAB itself does most of what any other web browser out there does. Except multi-frame GIFs, and no support for Java (or, now, ActiveX). Multi-frame GIFs are being discussed as a possible addition to a future version. Too bad no one is porting Java over to TOS/GEM. I wish I had the know-how to do it as the language itself looks pretty interesting. I might even be able to come to grips with it enough to write a couple of small applications in it. And wouldn't it be great to be able to run applications written for other platforms in Java?

Long awaited?, Didnt even know about it?

>II). You can download a copy now by pointing your web browser here:
> http://newton.ex.ac.uk/general/ug/jones

Just Downloaded it,

>You can also download some other software, so what are you waiting for,
>take a look!

Did, and was I suprised?, hehehe VERY NICE Game, Honestly NOT what I
was expecting of GFA, (Sorry but thats the truth) I was pleasently
suprised that GFA could actually do this?,

This is an excellent game, very well put together, Glad I downloaded
it :))))

Cheers.............!ynoT

>you!

No, maybe I wasn't too clear! What I meant was I had already read all the 500+ articles in csas with PINE thru my UNIX account, before trying out Newsie. Newsie showed over 500 articles still there! I marked all read and tried to get it to go back and reread the directory again, but it bombed out on me! I've yet to be able to quit from Newsie without 2 bombs and that is after closing the connection first, I even tried closing connection and then having STIK hangup, still 2 bombs! Haven't tried the read offline command yet, have done all my reading online, that works! Problem is that my ISP hs a very liberal policy on how long they let messages hang around before they expire them! Lots on groups have well over 1000 messages when you first subscribe to them. As it stands now, I'll never get to see the newer messages with Newsie! Good thing I still have the UNIX account!

I don't know. However, it is fairly easy to set up a yellow pages
email address in Oasis, 1 for each group to which you want to post.

ARE YOU NUTS?????? Your provider for Internet Services is ripping
you OFF! The Internet was designed to be FREE!! PLEASE PLEASE let
us show you where/how you can get it free! Please Read Below.

JUST FOR READING THIS YOU WILL GET A FREE EMAIL ACCOUNT!!!!!!

NEVER EVER pay for Internet Access AGAIN!!! E-V-E-R!

This Amazing Course on Audio Tape teaches you STEP by STEP what
your Internet Service Provider doesn't want you to know!

* How to get FREE DIAL-UP PPP Internet Access!
* How to Surf the Web,Newsgroups,and EMAIL Anonymously/Untraceable!
* Where you can get FREE Email Remailing!
* Where you can get FREE Email Addresses!
* Where you can get FREE Access to SMTP (Outgoing email)!
* Where you can get FREE Access to News Servers!
* Where you can get FREE Web Pages!
* How to get FREE Internet Tools for Email, News, WWW, Etc.!
* How to get free accounts on BBS's!
* How to Manipulate your IP Address!
* MUCH MUCH More!!!

No matter where you live we guarantee you will get FREE internet
access legally and anonymously!

O N L Y ------> $29.95 Delivered (WORLDWIDE)
Act NOW supplies are in Limited Supply!
FAST SERVICE!

>run at all!), but I just can't get it to work.

Have you tried using the file FSER096B? The file contains an auto folder
program and a CPX file that will allow 38400 baud use. The Modem.CPX that
comes with the Atari Mega STe and TT doesn't allow 38400 baud.

>just had a long gap between versions, have you parted with Oregon
>Research, did they ship me an old version, or, um, what?

Version 6.4 is the latest version that Oregon Research has. They are having
trouble in trying to get newer version from their distributor overseas.
The way I understand it is that Mr. Karsmakers will be handling the
distribution rights in the near future.

>
>resolving dismayl.demon.co.uk 6665 resolve (dismayl.demon.co.uk 6665)=
>bad format in domain name or dotted decimal.

I don't recall what to do exactly but you shouldn't normally actually
need the port number so there are 3 things to try:
1, Don't use a prt number and it should use the default port (6667?)
and dismayl supports anything from 6666-7000 IIRC so you should be OK,
2, Enter just the name and it will prompt you for the port number
afterwards,
3, Use a colon instead eg: irc.demon.co.uk:6667

One of them WILL work, I'm almost sure of it :-)

I know that there are many takes on Atari, and while Atari Corp. may no longer exist, there are still many supporters of Atari products.

I grew up with Atari and still remember the "Have You Played Atari Today" jingle. I remember when I first got a Sears VCS (2600) and played it well into the night. I think I had Combat and that game where you shoot stuff that just scrolls by. I really can't remember now. One of my most favorite games of all time was Kaboom! I know it wasn't an Atari game, but it did play on my VCS!

I'm sure everybody has seen the big Atari symbol in Bladerunner. Trouble is, I wonder if the name Atari will even be around when that time comes? Is there a list of Atari appearances in movies or TV shows? It would be interesting just to know.

Anyway, Don Thomas has written two articles that I've reposted here in the hopes that people will read them. It would be nice if the name Atari were kept alive for at least a little while longer. Maybe if somebody notices, maybe if somebody remembers, just maybe...

Dom

P.S. Here is a list of e-mail address that I've compiled:
(I take no credit other than typing them in...)

Dateline NBC at "dateline@nbc.com"
NBC Nightly News at "nightly@nbc.com"
The Today Show at "today@nbc.com"
CBS News Up to the Minute at "mail@uttm.com"
CNN at "cnn.feedback@cnn.com"
Good Morning America at "gma@abc.com"
Nightline at "ntline@aol.com"
Primetime Live at "ptlive@aol.com"
Fox News at "foxnet@delphi.com"
Time Magazine at "letters@time.com"
U.S. News at "letters@usnews.com"

A great place to get e-mail addresses is WebCrawler at "www.webrawler.com".

Now let's get busy!!! :-)

1886. CAB / STIK and JPG's

Newsgroup: comp.sys.atari.st
Date: 1996-11-03 00:00:00 UTC
From: michael@ghf.augusta.de
Message-ID: <GKDJAIAFUP@ghf.augusta.de>
Source record: 134714

Hallo to all

I installed the new Version's of STik an CAB, but i always have problems
with the loading of jpg-Files.

Do someone know where the problem is? The last few byte's from a jpg-File
can't loaded. Th RxD-LED at the modem flashes, but there is no respons with
the TxD-LED.

Who can help me?

Michael

1887. SMTP Mail Client for STiK?

Newsgroup: comp.sys.atari.st
Date: 1996-11-03 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <98666130_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 134715

Is anyone writing an SMTP mail client for use with STiK?

Antmail is POP3 so is of no use to me with Demon (who don't offer POP3) :(

Just wondered if anyone is writing one?

Yours hoping,

>with the loading of jpg-Files.

That's not a new problem.
At many CAB-Sessions you can see as example 3500 bytes to get and
the hole transfer stops at 3412 bytes. Rest lost in Space...:/
If you have a .GIF /.JPG so you found smal pixellines at the
bottom of any picture.

If you take .HTML, sure we are missed some parts of..
(Next step is the "reload"-button..)

I don't no what's going on..
I found this trouble from CAB 0.x to 1.42

And the grazy point is, i found that trouble not at all CAB sessions!

Some Ideas?
Feel free to send some..

regards, robert

szhays@rocky.ucdavis.edu (Eric Hays) wrote:-

>OXO does have a web browser that should be coming out soon, to compete
>with CAB. And the OASIS guys are still planning out to come out with a
>web browser to go along with their package.

I'm actually beginning to think this is just a hoax. :(
The screen shots and details look impressive (claiming to be Netscape
compatible and make full use of the DSP). But their site hasn't been updated
for 3 months, the release date was September/October (if I remember right),
and I've emailed them fr details and had no reply!!
Surely someone connected with the project must read this newsgroup, but
they've never posted in here about it.
Does anyone know if this browser REALLY is being developed and when it will
be released?

>At this point, if they get PPP built into STiK, StiK/CAB will be pretty
>good. CAB itself does most of what any other web browser out there does.
>Except multi-frame GIFs, and no support for Java (or, now, ActiveX).
>Multi-frame GIFs are being discussed as a possible addition to a future

Do you mean animated GIFs? If so, then the latest beta has got 'em and they
look the business!! :)

It sure is. The easiest way is with a 'Shell' account. This is text
only. No pretty pics but it is fast. Just get a 14.4 minimum modem and
use a comms program.
Freeze Dried Terminal is easily the best. fzd220.zip (or similar) is the
filename.
It's a free full version. (Don't bother with flames)

> PS Also is there a good word processor available for the ST ?

Heaps. From the simplest, First Word, to many more complicated ones. Go
ftp'ing.

Regards, Julian

Hi there,
Is there a tsr which changes the VT-52 codes to VT-100 (like the ANSI
one)... I want to run NOS with a VT-100 character set and codes.

: What do I type here for eg. dismayl.demon.co.uk on port 6665?

Well, I've never used AtarIRC, and no doubt twenty other people who have are about to answer this thread, so I don't know why I bother, but just in case, here's my 2 cents:

The standard method for writing a URL with a port number is url.server.domain:####, so in your example you would write dismay1.demon.co.uk:6666

You got it mostly right, just substitute a colon for the space.

An amendment to my assessment of Newsie 0.60:

Once I set it up to use Edith Professional as the text viewer instead of the built in viewer, I seem to have eliminated the annoying inability to read more than one post with out a freeze-up. Now the program looks good enough that I'll have to consider getting a "real" modem to replace the old 2400 baud Supra!

1902. serious harddisk problems: low-level format needed?

Newsgroup: comp.sys.atari.st
Date: 1996-11-03 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <327be150351034@sn.no>
Source record: 134770

I've realized that my harddisk is seriously messed up and I don't know what to do about it.

The drive is a Quantum Lightning 540S which I've got connected to an ICD "The Link II" SCSI adaptor.
I've been using ICD's own software since it came with the drive and it's been working without any problems. That is, until I found out that it wasn't MiNT compatible :-(
(The driver is ICD's version 6.5.5)

So I decided to change the driver to one that could handle MiNT, and since CBHD seemed like a good one and was free I decided to try to swap the driver for this one.
Well, I've been having nothing but trouble with it. Bombs, freezes etc.
So I changed back to the ICD driver.

Luckily I have two harddisk units, so I can back up my whole working drive and do a little experimenting.
So I booting with CBHD from a disk and used it's formatting and partitioning which seemed to work fine. I then copied all the data from my working drive to this one.
But I haven't installed the driver yet since I expect this to cause trouble, if I have a driver on each harddisk- so for now I boot from a floppy.

Since this drive seemed to work fine I decided to do the same thing with my working drive, but no go!!!
For some reason CBHD often locks up when using this drive (yes, I'm running it from the floppy), and when formatting it just works for 3 seconds or so then returns to the program! Just like it refuses to reformat the drive!
Could it be that low-level formatting might be necessary?
In case it is, what do I do?

The reason I'm wondering about this is because I remember running a program called "bootfix.prg" which came on one of the ICD disks. The manual says this:

BOOTFIX.PRG

Because of a problem in TOS, some embedded SCSI hard drives will not boot the first time after being powered on. Since the Apple Macintosh has the same problem, some drive manufacturers have included options in their drives to overcome this.
BOOTFIX.PRG will program Quantum and Seagate drives to boot the first time. Just run it once; the changes are stored in the drives.

Oops! I think I've run this program several times... could I have "damaged"
the software inside the drive because of this? What should I do?
My other drive (an old, noisy 5.25" Hewlett Packard) gave me no problems
when I tried to format/partition it with CBHD's software, but now the
Quantum drive seems to act differently when I format it with ICD's software
as well! (it only "formats" for 3 seconds or something and then returns to
the program).
I hope all of this doesn't mean I don't have to buy a new drive!

Hello All,

I have a friend who has an Atari St and would like to get onto the internet. Could you please advise me where I can find some software to download for him so that he will be able to have: 1) e-mail 2) newsgroups and 3)possibly a web brouser?

Thanks for any help you can give me.

Also, does anyone know of any stores in the greater Vancouver, BC and/or North West Washington area's that still service the ST? The last one that I know of was in New Westminster, BC and closed about a year ago.

1905. Re: Parallel Port Syquest or Zip drive ??

It's unfortunately not possible to use the parallel port versions on
the ST or for that matter the Falcon or TT either! Atari did not
implement all the lines that the PC's have. Our parallel port was
never meant to be a bi-directional port in the sense that it has been
implemented for the PC! Ours was and is mainly a printer port! Works
great for sending info out of the computer, not so well receiving info
from outside! SCSI cards for the PC are relatively cheap! Much better
way to go for swapping drives!

HI, I am using PINE for the newsgroup, and that's why it is like it
is.

>I just had a look at my newdesk.inf and it's at 4148 bytes...
>No wonder I get that message then. Do you know of a way to allocate more
>memory for this file?
Yes 4148 is definitaly too big. I don't know any way to allocate more
memory available for the newdesk.inf file.
However I wonder how you can have 4148 bytes in your newdesk.inf,
because mine is only 2836 bytes and I have a lot of things in it, lot
of automatical launch (zip, gif, txt, lzh, etc etc) plus I have a lot
of icon on my desktop and something like 110 links to my icons.
I would say that you should restart from the scratch your newdesk.inf.
I am sure that you newdesk has several link that are not used anymore.
Or double lines, repeated or something..
A little hint , when you want to assign an icon I would suggest you to
use the maximum wildcards. Try to avoid the icon assignment from a
specific file. You'll get your newdesk.inf a lot smaller by doing
this.
Bye.

Source record: 134782

Hallvard,

> As I've preset certain well-used paths I can
> access files/programs with great ease, so why not built a "program
> launcher" into a file selector? Would it be possible.

Hmm, what you're asking for sounds like a subset of what FlexMenu and FastPath can do. FlexMenu and FastPathare commercial programs available from Trace Technologies. You can reach Trace Tech at:

Mail address: Trace Technologies
PO Box 711403
Houston, TX 77271-1403

Genie email: K.GERDES
Internet: k.gerdes@genie.com

I didn't write the following, but the author did a pretty good job of describing FlexMenu's features. FlexMenu would also allow you to use the paths you have set up in your FS to launch programs.

1) Launch programs even in other programs while in Geneva.
2) Launch accessories as programs without changing extensions to .PRG
3) Launch accessories that are unable to change to programs and will load into the Geneva 'File Menu'.
4) Link another program when you exit a program and it auto executes (a plus to this is you don't have to save this link to take affect, sooo plan ahead and put your link in on the fly)
5) Turn a 'Clock' off by running a program and turn it back on upon exiting, for that matter you can put to sleep anything including 'Screen savers'.
6) Adds a 'Hot Key' for all 'Pull Down' menus inside of programs, even those that had NO keyboard inputs.
7) All 'Pull Down' menus can be at bekon call with a double click on the screen in one small "BAR" menu.
8) Linking text files to a text reader.
9) TT users can use all 20 'F' keys to match your TT desktop (Don't have remember new ones (G)).
10) Can call up your own 'groups' of files on other "RUN" menus from the Menu you are in. (Groups meaning a consolidation of files located on other pages, not to be confused with NeoDesk type of "Groups"
11) You can assign a 'default toggle' in a 'Pull Down' menu in a program that will not allow you change that configuration to a 'SAVE'.
12) Can be used with NeoDesk4.

13) you can link a FSEL to any execution of a program.
14) CodeKeys compatible even under Geneva for each program. Works
very well with Geneva Macros as well.
15) You don't have to remember what 'Hot Keys' go to which, as all
are shown in the 'RUN' menu and the 'BAR' menu.
16) If you prefer the mouse, all entries in these menus are compact
and can be clicked once to activate (Neat Huh?).
17) 18 menus available with 40 entries with one additional Menu (19)
for Flexmenu utilities like SLEEPER, WAKER, TERMINATE Programs
for use with Geneva.
18) Customize all menus the way you want them.
19) You can rename all menus to what you want.
20) Set up your 'default' Pull down menu to be available to you upon
execution of a program (File, Settings, Options etc. [whatever])
21) FM has a ledgering system for keeping time you are on projects
and is not limited to only one program but as many as you have
use while you are in the project.

IMHO this program is a whole different way of computing.

>in the free demo I have.

There's an easier way. Just install a program called "hold it" in your
auto-folder. And at any time you need to "hold" messages like those that
.TTP programs give you and quickly disappear you just hold down either
the <CTRL>, <SHIFT> or <ALT> key and the message will stay there until you
release the key.
You can download it from:

ftp://ftp.sn.no/user/hallvart/atari/hold_it.zip (1 Kbytes)

Source record: 134787

I'm getting *really* tired of all these spams on the net now, and I'm sure
I'm not the only one!

As a user of an offline system it affects me very much as I have no choice
but to download the groups I've selected. (I guess I could have set a
"kill file" in Tin, which affects my offline packets as well, but I don't
know how..).

Anywaym we do have to get this thing stopped, and I for one don't delay any
complaints to postmasters at the site of origin.

But this guy who sent all these (100 or so?) messages has obvilously faked
his email address, and I'm not sure where to send the complaint. His
address says "is.nyu.edu" while the path says "nns.diasoft.ru" which I
believe is in Russia...
I've written to postmasters at both sites just in case.

Is there an email address where one can write concerning any complaint on
the net regarding spams/chain-letters etc?
I really want to get this kind of thing stopped and I'm willing to do what
I can.

Hi,

I have an Atari SLM804 laser printer for sale.

300x300 DPI / 8 Pages per Minute
Plugs into DMA port of the ST or TT030
Drum installed is in fair condition
Extras included with printer are a drum (not great),a new sealed toner,
and SLMC804 ASCI controller.
Comes with manual and I can supply a disk of SLM utilities

Asking $125

If you don't have 0.62, get it. No ideas as to the crash when
quitting, although someone else had a similar problem. Are you
typing the password, or have you saved it in the prefs file?

Thanks,
John

Need help getting my other hard drive working. I'm trying to install a Seagate ST157 into my Megafile 44 case. So far I've plugged it all in, but AHDI doesn't recognize it at all.

Anybody know what the dip switch settings (on the bottom of the case) should be? Anything else I should/should not be doing?

Thanks.

I have a few things I do not use anymore,
All Itmes are for the Atari ST/STE/MEGA ect.

DynaCad, complete with box and dox's! I paid $389 $offer

Drive master for duel external drives ST $10.00

Cordless mouse, I had to install new cable end! $10.00

HiSoft basic professional complete with box/doxs $offer

Specter128 with disk (no roms) $ 7.00

Cyber Paint complete with box and doxs $offer

I left the software prices at OFFER, if you need them
make a fare offer. Thanks!!

All Items have been tested and are in good condtion
unless Stated.

Shipping, mostly by US Priority mail, had excellent
results. $3.00 to $8.00 shipping charges.

Payment, Checks take 8 days to clear, Money orders
are shipped same/next day, COD with $5.00 deposit
only.

How 'bout that...just today at my user group meeting, someone had Clod Hopper on a disk so I copied it. I was about to upload it, but since my Net provider stinks big time I'm unable to.

Anyways, it's a nice clone of Miner 2049er and you can even run it from a hard drive but you need a disk in your floppy drive to save high scores.

Glad that this whole Clod Hopping thing is settled...

: article to 10 of your friends in e-mail. AND if YOU REALLY, REALLY believe,
: mail a few to newspapers or other news programs. A letter in your own words
: would be great!)

This is a really wonderful idea, as I'm just as upset to see Atari
disappear without comment or popular remembrance.

However, to put this in perspective, the general media has been more or
less ignoring Commodore's demise for 2 years now. Interestingly enough,
Dateline was the TV program of choice to bombard for Amiga users when
they wanted some coverage. Nothing came of it, though.

It's only now that a US company is buying the Amiga back from the German
company that wrenched it from Commodore's dead carcass that some
occasional coverage is popping up. Sad, but true.

What it comes down to is that when the general populace forsakes
something, it remains the responsibility of the userbase to keep the
memory alive.

Hi phantomm@harold.eastky.com, on 01 Nov 96 you wrote:

p>
p> Hello Again,
p>
p> Can someone tell me what the last version of the Atari HD driver was?

I think it was v6.061, but some people needed to stick with v6.05c for some
reason that I can't remember (helpful, aren't I %^{|).

p> Also need to know which HD driver is better to use with a large IDE
p> hard drive, ICD v.6.5.5 or the latest Atari HD driver?

Given the choice between those two I'd chose ICD. I never had problems with
AHDI itself, but the HDX formatter/partitioner refused to operate on my
machine. The utilities with ICD are excellent.

That said, HDDriver is sure to support all the latest HDs that come out, so
if you ever find a limitation with ICD you know where to go. That said, if I
had a fully working ICD (ie all the utils) I wouldn't have gone out of my way
to get HDDriver. If it works, keep to it.

p>
p> 3. Are any of these monitors still being made? If so where can one
p> get them at?
p>
p> 4. Are there any problems using something like a ScreenBlaster 2 with
p> them?

The NEC-3D was one, but it's very old now and you may have a problem locating one. It'll work on a Falcon in both ST and VGA modes with the appropriate adaptors.

I'd guess that the problem with this type of monitor is that it won't sync high enough to give you decent screen-rez/colour-depth at the top end.

It's 'one of those problems' where there's a trade off between compatibility and capability. The best option would seem to be to retain an ST RGB monitor and get a decent SVGA that'll hit the top limits that the Falcon can output.

Just my opinion...

There is a program called shell buffer that increases the buffer
allocated to the newdesk.inf file. It should be avalable at most ftp sites.

> What is Kaq9? Is it an alternative to WWW?

Ka9q is network driver software. Are you currently using Stik as your
dialer? Does your internet provider permit SLIP connections? If you don't
know ask them. If they require PPP for the connection neither Stik nor
Ka9q will work for you. If this is the case you'll need MintNet.

> I also have Spectre. Would it be easier to use the Mac?

The only Mac internet software (other than Lynx) that I've found requires
a minimum of System 7.0 which doesn't run on Spectre.

Terradesk works just as well for pausing after running TOS and TTP programs. Now that I finally have a hard drive for my ST, :) I can seriously use an alternate desktop with my SuperBoot setup all sussed out.

But I still think a special TTP shell would be cool. Imagine you can save all the commands for the TTP and you can access them from a menu bar you configured. So when you select "help", the shell passes "-h" to the command tail and runs the TTP passing the command along.

Of course, I also have another cool idea for having something like a Start button from Windoze 95 as a GEM application. But I heard someone already made one though it's for MagiC only.

This weekend, I was sifting through a box of disks that a friend at University had given me a couple of years ago. I had looked at the more obivously labelled disks long ago, but there were a whole lot of others that I hadn't got round to sorting through until now. Anyway, turns out that they were VAULT'd backup disks of a hard drive, so I KEY'd them onto a spare 80 meg partition on my hard drive (I'm the guy with the non-Seagate 520 meg HD MegaSTE, for those who have been following recent threads).

Most of the stuff was obvious enough, except for one huge chunk, which takes up about 11 megs, and was apparently one whole partition on the original drive.

This is made up of a program called "TEX". I don't have the author's name with me right now.

What is this????
WHat does it do????
Is it shareware, PD etc. or is this a pirate copy???

Please help!
Oliver

1947. Help: How to read ATARI discette with a PC

You don't need to have a multitasking systeem to launch a program
from within the Freedom fileselector. Freedom is IMHO a much better
fileselector than Selectric or Boxkit. The latest version is even
better. With this you don't need Xcontrol. The fileselector has a
built in controlpanel.

1950. Looking for Richard Morris ST->800XL transfer

Newsgroup: comp.sys.atari.st
Date: 1996-11-04 00:00:00 UTC
From: skr@dcs.ed.ac.uk
Message-ID: <E0CroF.ICE.0.staffin.dcs.ed.ac.uk@dcs.ed.ac.uk>
Source record: 134669
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Can anyone help out here?

I want to find a software/hardware system that will allow me to hook up my ST to an 800XL and transfer the data to the 800XL as if is were reading from a disk drive. In other words I want to be able to store 8-bit disks on my ST's Hard Disk and load them onto the 800XL from it.

I can store 8-bit disk formats via ST-Xformer but I don't know if it is capable of transfering the data to the 8-bit in the required fashion.

I posted a request for help in the 8-bit newsgroup and one guy said that a chap called Richard Morris had such a device and program.

Any help in getting a result would be appreciated....

Perhaps a chat script like this could work, note that each line but
the last one must have a blank space at the end. And if you wait/send a
string containing spaces or tabs, you must quote it.

```
------ 8< ------ 8< ------
ABORT 'NO DIALTONE'
ABORT 'NO CARRIER'
ABORT BUSY
ABORT WAIT
ABORT DELAYED
TIMEOUT 5
"" atz
OK atdt8866086
TIMEOUT 40
CONNECT ""
Login: thechyld.pcc-uky
Password: mypassword
Option: P
"" 'ppp mru=1500 idle=300'
------ >8 ------ >8 ------
```

Hope it helps! Bye. Bruno.

NeoDesk 4/Geneva lets you do this!!!
You create what is called an NPI file that can be put in group windows,
or directly on the desk top.

One example of how I use this...
I have more than one Internet account/provider...
So....I've created different NPI files for each account...
When I double click on one of them...it calls NOS and
hands it the appropriate config files.
I renamed nos.ttp to nos.tos so I don't get the dialog box.
This approach keeps me from having to make multiple copys of
the Oasis/NOS directories/files for multiple accounts.
It also allows me to be connected, and to be downloading/uploading
info while I'm doing other things with my computer such as reading
or composing messages with Oasis.

This is really only useful for applications that will always
use the same paths and commands...

But...you could create a "Menu Group" for your favorite ttp programs
with the command line only. NeoDesk will then present you with a
dialog that already has the command typed, and you simply enter the
paths.

As for pausing the screen after a TOS program exits...
The Geneva Tos program does this (as an option that can be disabled).
TosWin also allows you to do this.
Both are applications that run TOS programs in a window.
I believe both will allow you to choose from different sized fonts,
and pass the term-cap, amoungst other useful TOS goodies.

NeoDesk4 ROCKS!!!
My only beef with NeoDesk 4 relates to running it on systems with
low memeory. It takes a bit of memeory to really get all the punch
that the program can deliver...
It can be made to remove itself from memory once an application is
launched...but under a multi-tasking system this option doesn't work
very well. It's really a great piece of work though...if you've never
tried it...you're really missing out on a great desk-top replacement!
If you only run one or two apps at a time...and have 2 or more meg memory,
it's well worth the extra memory requirements.

Brian

As long as you've not used any extended sectors/tracks on the HD (1.44) floppy, you should be able to just insert it and read it...TOS v1.04 and up are supposed to be fully compatible but I think it works best on the lower versions of TOS if its formatted on the PC first...I know going from my Falcon to a PC has been no problem at all (or vice-versa) 'Luck!

1955. $$$ MAKE MONEY $$$

Newsgroup: comp.sys.atari.st
Date: 1996-11-04 00:00:00 UTC
From: "Ken L.ender" <klender@gte.net>
Message-ID: <327E6E59.2991@gte.net>
Source record: 134674

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months. think about it. You see those 'Make.Money.Fast' posts more and more. That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, whatï¿½s $5.00, I spend more than that in the morning on my way to work on
coffee and donuts for the day. So I sent in my money and posted. Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began receiving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM. By the end of the fourth week, I had received nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five separate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill, money order, or bank note inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1- Natalie Jansen
Lancveldlaan 18
5671 CN Nuenen
Holland

2- Anthony Murray
1216 Hampshire Pike D50
Columbia TN 38401

3- Steve Boltinghouse
1009 Bird St.
Hannibal, MO 63401

4- Eric Nelson
1248 Hamilton St.
Allentown, PA 18102

5- Ken Lender
6426 Moss Way
Tampa, FL 33625

STEP 2.

Now remove the top name from the list, and move the
other names up. This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, thati¿½s right, only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list. And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass up!!!

So thatï¿½s it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thatï¿½s the key, and thatï¿½s all there is to it. Print this out
right now so you can refer back to this article easily. Try to keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be
for real, then don't do it. But please print this article and pass
it
along to someone you know who really needs the bucks, and see
what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent
the 5 bills, people added him to their lists, and in 4-5 weeks he had
over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

>
>Best regards,
>Nima Montaser
>

Hi Nima! (I'll be sending an order your way on Nov. 8th!) :)

Anyways, not sure about Mint but you would use HSMODEM 6/7 to "remap"
the Modem.CPX...for example if you picked the following you'd get:
(pick from the Modem CPX module)

This:
110 you'd get 38400
134 you'd get 57600
150 you'd get 115200

I'm using HSModem v7 with my Falcon at 57600 on the 'Net and it does
ftp file transfers like "zoooooom" <grin>

1964. Importing mail in Okami

Newsgroup: comp.sys.atari.st
Date: 1996-11-04 00:00:00 UTC
From: Nroot@stud.ntnu.no
Message-ID: <327e498a20e7ed3@stud.ntnu.no>
Source record: 134683

I've been trying to get Okami to import mail the last couple of days, but can't get it to work. I'm using the getmail- and getnews-scripts, and while Okami imports news easily, it always reports "Mail.josk - no work" everytime I run oimport. The docs says that the mail-archive should be depacked to /var/mail, this doesn't work. I've also unpacked it to the directory specified by maildir, no luck.

Any suggestions anyone?

I corrected NOS ka9q to work with NT servers with ppp-pap, so that you can connect to internet now to any provider with this software.

If anybody is interested please contact me as I am adding some more features to the software before relasing, but if you need to test it I can give you a working executable.

I also tested slip, connecting with nos or stik and closing nos, enabling stik, using cab, disabling stik and running nos again, all works perfectly

I am running the gateway with net2net from Paul Baker now, giving email access to my users, points and other fido nodes!

As a matter of fact, Oregon will be doing it directly with me behind them instead of with someone else in between them and me (which is where all the problems seem to have originated). Look out for version 7.0, around January 1997, which will be available in the US again. If you want to get 6.9 already, just get it through me direct (email for into).

Well, I've enabled STiK and connected before running CAB. CAB
runs okay, but as soon as you select a URL to connect to, it crashes. The
only other suggestion I've had has been to use the CAB.OVL from the WWW131
archive. Is anyone else with a Falcon doing this???

Apparently, it has been made PD, but no one seems to no where it can be found.

AH> Alternatively, you could try GEMsound. But it has it's problems too,
AH> and I'll be damned if I can figure out what all the handles mean.
AH> Better documentation would have been nice.

I don't like GEM Sound at all. Aside from being a bit unstable and using a weird file format, it doesn't even allow you to assign specific sounds to specific functions. It uses some strange method of disk order or something, because if you change the order of files on your disk, it changes the sound assignments. This also makes it problematic to have random sets, something you can easily do with SAM (and GBELL).

p>
p> : Try Junior Office first - it is freeware and available from most
p> sites.
p> It is freeware? Or do you mean shareware? BTW, how does it compare
p> to STraight-Fax?

As far as I can see the package does not ask for any shareware
contribution. I think JO was once a commercial product but the owner no
longer wanted to market or support it so released it into the public dom

The text in the first "free" version was German but this was quickly
translated to provide an English version. For the English version look for an
archive like JOxxxE.

I have never used STraight -Fax so can't comment on this I'm afraid.

--

Well, if you're multitasking (which you'd need to be for this sort of system
to be really useful) then try Freedom. Apart from being the best fileselector
I've ever used on _any_ platform, it definitely allows you to run applications
by CTRL-DCLICK on them. Similarly, if you have registered the filetype and
a viewer in the config file, you can launch a file into a viewer (like from
the desktop).

It will also do dozens of other things, but give yourself enough time to see
if you like it, as it's quite in depth and needs to be setup to suit your
own preferences.

Cheers,

Xav

I agree. I've used Freedom 1.15 every day since I registered it almost
a year ago, and when the old TOS/MagiC/N.AES/whatever fileselector pops
up for some reason, I feel totally lost. Freedom is brilliant.

I'm not so sure about Freedom 2. I tried the demo a couple of weeks ago
and was very disappointed. Perhaps I should have another look before
I totally discard it, but I don't think the upgrade is worth it's price.

>for Modem 2.

You can easily set it up to 38400, but beyond that is not that straight-
-forward. I installed HSMOD7 (Which everybody should use!), which in
addition to fixing lots of bugs also replaces the lower speeds with
higher ones. So selecting 134 baud will actually set the port to 57600.
See the HSMOD-docs for a complete list of the new speeds.

For your reference, here's a copy of my .ppprc (I'm using KGMD, if
you use another setup you might have to replace ttya with modem2.)

```
lock
connect "/usr/etc/chat -v -f $HOME/.chat-script"
modem
crtscts
#debug
passive
defaultroute
# Modem 2 at 57600 Baud
/dev/ttya
134
```

I can answer your first two questions...

Atari officially went out of business, they were bought out by JTS Corp.
who makes hard drives for notebook computers and the only thing still
"Atari" is the licensing of games they sell to other companies(like
Nintendo's Arcade Classics for the Game Boy).

Here's the site for the Jag Server...
http://www.edu.isy.liu.se/~z94patsa/jsdata/jserver.html

Hope this helps :)

Hello... my name is Cesar Leon.... i'm chilean and i has an Atari 1040STf
about 5 years ago. (sorry for my english, anyone understand spanish?)
Well, my questions are:

- What's happen with Atari Corp. actually (November 1996)?

- Anyone know about Jag Server? Could give me information?

- I edited my desktop.inf file and did repeat some lines of aplications
programs paths, and crashed(?) with the size of desktop.inf is above of
2kb. Know somebody how to fix it? it took some memory area reserved?

- I'm using MagiC v2.01, NVDI v2.5 and Neodesk v4.0 and it crash when
i use Notator v3.x (version?) and Dosound (Shareware software). Can be
it fixed?

- How i can convert .seq programs (made with CAD 3D) to .fli?

- Anyone could send me the Pure C Helps on english? (mine is on deutch) :(

- I want to get a Falcon 030 but i haven't much money, anyone sell one
at low cost?

- Some Atari ST Warez? (hehehe, joke). :)

- Some good new about CAB?

- Anyone sell Jaguar catridges or CDs? too one procontroller?

Hmmm... much questions, thanks for any answer(s)...

My complete name is Cesar Antonio Leon Mansilla
my e-mail: cleon@ona.fi.umag.cl

Region: XII
Country: Chile
City: Punta Arenas
Address: Plaza Esmeralda #436

My system configuration is:

- One 1040STf with 4 meg. RAM, 135Meg HDD (removable Syquest), 1 color
monitor (SC1224) and lots of Games and Utility software.

- Atari Jaguar console, Atari Jaguar CD player, with those games:

* Blue Lightning (free game)
* Vid Grid (free game)

* Myst Demo (free demo)
* Tempest 200 soundtrack (free music CD)
* Doom
* Kasumi Ninja
* Highlander
* Defender 2000
* Dragon's Lair
* Myst (Original Game)
* Primal Rage v1.2 (Some new version?)
* Fight for Life

... and accesories:

* Memory Track
* Procontroller
* CatBox
* Monitor RGB adapter (Cool change from TV, really good image)

Ok... no more... after... Thnx for all Good Bye./

(Cesar A. Leon M.)

Only to have the Java and the browser along with the other crap running
together. It comes naturally for the Macs and Windoze machines of course.

But the Atari platform already has it's own form of "Java" applets. Put
regular ST programs on the web page and download them from CAB. CAB will
then run the programs automatically and there you go!

Of course, you can't use anything like Zip but it's even better when
Ice-Packed which cuts down the DL time :)

If you switch off preemptive multitasking it should work, at least it
did for me. Somebody claimed that STiK 1.11 worked with preemptive
multitasking, I don't know since I switched to MiNTnet before 1.11
was released.

Hi hallvart@sn.no, on 01 Nov 96 you wrote:

h>
h> [Changing harddisk driver from ICD 6.5.5 to CBHD 4.57]
h>
h> I'd be interested in finding out how you did it because I'm having
h> nothing but trouble. I keep getting bombs when booting (especially
h> when I do a warm reboot instead of a cold one), or I only get it to
h> boot from floppy disk when CBHD is installed.

Hi Hallvart,

Like you, I have had bad times with CBHD. Bombs, difficulty in re-setting to the ICD kit etc. I put it on one side as it was causing so much trouble!

The other day I had yet another go at installing it (v4.56) and have got somewhere at last. It is really worth doing - I don't have any figures but it seems that CBHD is faster than the ICD driver. I have had it running in normal operation for some days now and have NO problems.

Here is how I did it - maybe there are some unneccesary steps here but this works:

1.Have the machine in normal ICD boot up configuration.
2.Re-name ICDBOOT.SYS (e,g. to ICDBOOT.SYX) to stop it being loaded.
3.Copy CBHS.PRG to the root directory of the boot partition and rename it to ICDBOOT.SYS.
4.Re-boot the computer. The old ICD boot code will load the CBHD driver.
5.Run CBHDCONF.APP and "Install". This will write boot code to load CBHD.SYS.
6.Give the CBHD driver (currently called ICDBOOT.SYS) its proper name -CBHD.SYS.
7.Re-boot m/c. The CBHD boot code will load the CBHD driver.
8.Run CBHDCONF. Load CBHD.SYS from the boot partition and change whatever parameters are necessary. (FAT, DIR buffers, Extra folders etc.) then "Save" to CBHD.SYS.
9.Re-boot. You should now be running OK.

The "bomb" problems seem to arise from running the config program without the CBHD driver having been loaded at boot time. Step 2 above cures this.

Note that Claus has specified the driver file, in the config. program, as "cbhd.sys" rather than "CBHD.SYS". Tis means you have to fiddle with the file selector path. I have tried to change the CBHDCONF.APP binary but this will not work as it performs a checksum on itself before executing!

The facility I miss is that to specify the device search sequence on boot-up. My boot device happens to be set to ID 1 which means that the CBHD driver

spends some time interrogating ID0 when there is no device there!

I have run the demo version of HDDriver 6.0. This seems to have a similar performance to CBHD.

1993. STik/CAB - Best version combo?

Newsgroup: comp.sys.atari.st
Date: 1996-11-04 00:00:00 UTC
From: Ali@land.demon.co.uk
Message-ID: <847156018_OASIS_@land.demon.co.uk>
Source record: 134724

Hi Peeps,

I've been privileged to see STik/CAB doing its thing on one occasion only. I've had it running several times but never as well or as fast as on that wonderful occassion last Saturday. Sadly the very next day it wouldn't work.

What is the most stable combination of S/W releases for me to run on a 4Meg STE with HD and 14400 Modem?

The documentation for STIK suggests creating a STIK_CFG folder, but the ON_LINE package for setting up STIK/CAB doesn't seem to bother. What is the best way to set things up?

Ali, a confused and fully paid up member of the gang....

IIRC, there is a program called HOTWIRE by Codeheads (late 1980s/early 1990s)
which does this. You can define alot (something like 100+) programs to be
fired up from the program panel and hotkeys. I think it was made obseleted (no
flames please) by the tos 2.0x desktop (hotkeys F1-F20 & icons on the
desktop).

>
>Has anyone else been alerted with the message "system out of memory" when
>you've installed several programs/icons/paths etc. in TOS 2.06's
>"Newdesk.inf" file?

Yes I have encountered this. Even on my Falcon running Tos 4.04, I thought it
was fixed, but guess not!

>
>Is there a limit in size to how big the setup file can be?

This is the environment space -- it can only take up to 4K of that Newdesk.Inf
file. Every line of text takes ~20-30 bytes, it means you can only have 150+
lines in that file.

>Is there a way to allocate more memory for this function? I should have
>enough RAM as my STE is expanded to 4 Mbytes.
>

I believe you can use a utility called shell buffer. You can find it at
cnam.fr in directory Utilities/shbuf_13.lzh

Guess, it's another goody to include in your Launch Pad, no?

: than Netscape!!! From what I've seen from this crap (and that's not much coz it
: won't run...) I can see why PC and AMIGA users slight Atarians.

Ummm...it's all worked fine for me from day one...
I started on a 1040STe w/4meg
Now running it on a Falcon 030...

I had a few problems early on...mainly with the OVL...some
versions do better than others.

: Don't get me wrong. I've loyally had mine (STf) since new 8.5 years back and was
: excited at the prospect at getting it away from pure MIDI to something else I am
: equally interested in. I have set up Internet/mail systems for the PC and MAC -
: both SLIP and PPP and even on a palmtop XT - all run better and were more
: intuitive to set up.

I've done both as well...I've pulled my hair out on both...
I don't see how you can get any more intuitive than the STik set-up
program. You simply put in your dialer script (same as any other
platform), your IP address, a few hardware values...and you're off and
surfing.

: I got the latest set of STiK and CAB/MGFTP/IRC061 and Telnet from
: http://www.flinny.demon.co.uk/ and nothing works. I get STiK to dial
: successfully but try running CAB. If you set the English cab.rsc file it bombs
: out before loading. If you use the default Deutsch then it'll load up but try
: getting a URL to load...

Are you sure you've a Slip account? Some providers say they've
slip...when they're actually only set up to do PPP (and sometimes CSlip).
A lot of providers really don't have a clue what they're doing...speaking
from experience. I had to prove to the sys admin at my university that
they didn't even have the binarys to do a slip connection! Yet, their
login offered the option, and they'd published that it was avilable.

: I set the cache to either a D:/ Ram disk or the A: (I'm a single floppy no HD)
: and all I get is read error in file \b\'00000001' ??? what the fuck's that
: mean?

Well...try this...create a folder on one of these devices called WWWCACHE,
then set that path in CAB. Now, exit the program, and restart it...
You should get a message stating that CAB is building the folders in
your CACHE. (It's simply creating folders A - Z).
Also...try using the CAB_OVL from the WWW131 distribution. I also
had problems with the latest CAB_OVL with version 1.4a from Flinny's home
page. The older OVL fixed it!

: MGFTP - no different. Enter a site URL *WAIT* click and it Bombs out ...
:
: IRC061 - can never find the irc channel you're selecting. It's there - I get it
: straight away when I login on the palmtop... I spose it needs a specific .cfg
: command in the undocumented \config setup that the author hasn't bothered to
: tell us either...

Dunno haven't tried to use it...

: Telnet - works when it wants to... you can get a connection but no transfer why?
: how come?

For some reason...you're not logged in properly, or telnet would work.
Once again...you might not have a slip connection after all.

: I tried an older version of CAB 1.01 and all I get is out of memory messages
: when I try to load a URL. How come with 4Mb????

You should increase the memory setting in the default.cnf file for STik.
This variable tells STik how much memory to take for itself when loading.

: If someone wants to prove me wrong, perhaps mailing me their setup, then I'm
: willing to eat my words publically, but from what I've picked up in the articles
: posted here, I'm not the only idiot to try this waste of time...

I'll do just that once I get a minute at home with my Falcon.
I'll just zip everything up and send it all to you...
It's been far from a waste of time for me...
I'm browsing quite successfuly...

Oh, and get it working text only first...then work on the graphics...

Say...have you tried to get NOS to work?
It might help confirm exactly what kind of TCP/IP stack your
internet provider is connecting you with.

Flush the cache and check cache.cab is zero length. Remove demon's
proxy server as well - sluggish or no response from it causes most of
my problems. The proxy is great when it works but is the first thing
to suspect when things go amiss for no reason.

I'm sorry to say that no-one can help you with this :(

This is the infamous STiK/JPEG bug that has been around for ages but has not
been fixed yet (the authors are trying to track it down, but it's proving
very elusive)!

All you can do is hit the <escape> key when it gets stuck, this will then
skip onto the next item for downloading.

Sure. With Gemulator 96 running MagiC, you even do not have drive U, because
Gemulator seems to catch most trap #1-calls (they don't appear in a SysMon-
trace).

Ciao

2007. FS: Complete Atari TT030 System

Newsgroup: comp.sys.atari.st
Date: 1996-11-04 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <55kmrr$ht2@kendaco.telebyte.com>
Source record: 134738

Selling my COMPLETE Atari TT030 system. Includes:

- 15" CTX multiscan monitor
- TT030 (Rev. H motherboard) with HD "A" drive
- TT RAM daughterboard
- 4 Mb ST RAM, 16 Mb TT RAM
- 48 Mhz CaTTamaran accelerator
- 290Mb Maxtor internal HD
- 340Mb Quantum external HD, case/p.s.
- ICD Link SCSI host adapter
- Indus GTS-100 720K "B" drive
- Golden Image Handscanner w/scanning tray
- ST Replay sampling cartridge
- SupraFAXModem 14.4 w/Caller ID
- Microsoft Mouse II w/bus mouse adapter
- Original Atari mouse
- Appoint serial mouse pen and driver

- Software: Atari Works, WordPerfect 4.1, Breakthru 2 (MIDI), Laser C, Straight FAX!, XBoot III, Sound Lab, Diamond Back 3, Touch Up 2.5, Data Diet, Invision Elite 2.0, STeno, Gram Slam, Imagecopy 4.0CD, Pagestream w/500+ fonts, Bitmaker, MegaKern, Mountain Reader II, Cardfile 4.06, STalker 3.05, Maxifile, Warp 9, Speed of Light 3.8, lots more!

- If you need 'em, will also throw in a 25-pin A/B box or two (for swapping between printers or modems), some MIDI cables, surge supressor/power center, lots of floppy disks and a few PC Bus mice that work with the included bus mouse adapter.

Asking $1600 SHIPPED AND INSURED anywhere in the continental United States. Will considered offers.

Please call Mike at (360)830-2277, or send e-mail to mparrott@kendaco.telebyte.net.

As it was issue one, then surely any amount of demand would be "unprecedented"
:)

Perhaps "unexpected" is more accurate - as well as more reassuring for the
Atari scene as a whole.

Cheers,

> 2) newsgroups

Nos does PPP and SLIP. Look for Oasis135E which comes with Nos. If a
POP3 account is the order of the day then install Oasis as per
instructions and then overwrite nos.prg with the pop3 version which
does all the same things as the supplied nos plus it does pop3 and
supports kill and get.

Nos is basically the PC Ka9q software. It's a pig to install, not
because it is difficult but because the docs and example files are so
old they are more hinderance than help. If you choose this route post
here again and someone will be able to sort it out.

Try ftp.demon.co.uk

> 3)possibly a web brouser?

Cab. This requires STiK as the online part which only does SLIP atm.
If you use MiNT then it can be run with PPP. Make sure the provider
gives plain uncompressed SLIP. Some staff are brain dead and supply
CSLIP which just wont do!

http://www.flinny.demon.co.uk

>Thanks for any help you can give me.
>Also, does anyone know of any stores in the greater Vancouver, BC and/or
>North West Washington area's that still service the ST? The last one
>that I know of was in New Westminster, BC and closed about a year ago.

With limited memory a shell account may be the only way to obtain a
connection.

I think the people who already own an ATARI will remember?, who else
is there to tell, who else would care bar ATARI owners? I think the
saying is "Preaching to the Converted"

>However, to put this in perspective, the general media has been more or
>less ignoring Commodore's demise for 2 years now. Interestingly enough,

Did Commodore do anymore for your average Amiga owner than ATARI did
for the average ATARI owner, ok we can thank each company for making
the respective machines, but what else?,
ATARI in effect died, but to be honest I and a lot of other ATARIans
didn't notice any difference?,

>Dateline was the TV program of choice to bombard for Amiga users when
>they wanted some coverage. Nothing came of it, though.

This will be in America will it?.....

>It's only now that a US company is buying the Amiga back from the German
>company that wrenched it from Commodore's dead carcass that some
>occasional coverage is popping up. Sad, but true.

Let us say Amiga is resurrected, then what?, what difference will it
make to the average Amiga user, If the ATARI name was bought back, and
ATARI started to trade again, I am sorry but it wouldn't mean anything
to most people, maybe nostalgically?

>What it comes down to is that when the general populace forsakes
>something, it remains the responsibility of the userbase to keep the
>memory alive.

Yes, but only Amiga users will keep Amiga alive and ATARI users will
Keep the ATARI name alive, no one else will bother, it's not a
profitable pass time:(

Theres a loayal band of Spectrum owners out there, keeping the name
alive, how many of us had Spectrums, we moved on, and in effect turned
our backs on the very machines that introduced us to the world of

Computers,

Cheers.............!ynoT

> >>"Newdesk.inf" file?

NEWDESK.INF should not be bigger than 4096 bits (for TOS >
2.0).Problem with memory begins after crossing approximately 3900
bits.
To avoid this are two ways: to allocate memory, or (the better - I
think so), to prepare some different desktops according to the job I
have to do (for DTP, comms, music and so on).
Clicking on icons You can change desktops.
In this purpose You can use the program LOAD_INF.PRG, to be find on:
ftp.cs.tu-berlin.de (130.149.144.4), /pub/atari/, on other ftp
servers also I believe.
Almost everything about creating the NEWDESK.INF You can read in a
file SURVIVAL.TXT by Thomas J Hopper (on many ftp servers also).

: maybe this problem has been fixed?

Is it possible to get SAM seperately from a Falcon?

Alternatively, you could try GEMsound. But it has it's problems too, and
I'll be damned if I can figure out what all the handles mean. Better
documentation would have been nice.

>
>I sent off a cheque for a subscription and have heard nothing :-(

I saw a comment (from Joe Connor I think) on CiX this weekend about the delays. They badly underestimated the demand for Issue 1 (probably the right way to go under the circumstances, IMO) and the reprints have only appeared in the last week. They're going out as fast as the crew can manage it - and I don't know how many, if any, are full timers. Issue 2 is slated for early December with a bimonthly publication scheme for the time being.

> the top of my head but will endevour to find out...Using these it should
> be possible to copy the games across to either the HD or another
> floppy..formatted in the more limited way of the pc..

There is no problem at all to read 10 sector per track and 82 track on a floppy disk.
These values are valid values for bios interruption 13h, with this one, you can read one by one all the tracks on a disk.

I may know the stuff becoz I'm working on a ST-emulator for MS-dos.
(http://www.micronet.fr/~tenabiss)

BTW, a friend of mine, has made a prog to make an image of any atari disk (protected or not), it simply read all data of the disk and make a single file (~900kb, 82*11*512*2, 82 tracks, 11 sectors, 512 bytes/sectors, 2 faces).

This one will be use in the future in my emulator (when it will be finished !!!!)

See ya !

>Is there a limit in size to how big the setup file can be?

Yes, it's pretty well documented in 'Atari TOS Desktop Survival Kit' .

Get it from: http://www.mcc.ac.uk/~dlms/atari.html

As previously stated:

NEWDESK.INF max size: 4096 bytes

DESKICON.RSC max size: 65536 bytes

There is also a maximum number of icons to be placed on the desktop.
(32?)

>Is there a way to allocate more memory for this function? I should have
>enough RAM as my STE is expanded to 4 Mbytes.

One way is to download 'GEMRAM' plus 'SHBUF' .
With GEMRAM loaded, you can allocate more memory for icons.

Another way is to use another desktop.....

> are there basic commands common to ttp programs?

Not really. Some output help if you pass them nothing, others require
(-h), some dont bother at all because they expect you to be running a
command shell which supports the "help.ttp".

>i launch the ttp, and
>don't type anything in the command line. command instructions flash by

>how do i pause the screen output so i can read the directions?

CTRL-Q & CTRL-S will pause output if you can hit it fast enough.
Otherwise, you need software to help. Many of the newer desktops allow
you to specify if the screen to be held or not, for instance.

>Another bloated utility that runs but can't walk... B^{<

Why bloated? I use it all the time (freedom v1.15) and apart from
some minor problems it works great. It offers quit a lot very
useful opportunities. Freedom 2 has even more possibilities. I hope
to get my registration key for Freedom 2 very soon. I burn with
impatience to work with the latest version. Once you get use to
work with it you can't do without it. IMHO: This is one of the most
useful programs (after CAB) that has been released the last few
years.

>This is in 16 color mode.

I have no problem with it on the falcon (in256 colours using blowup). I used to
get something similar but solved? that problem by enabling STiK BEFORE running
CAB. What I want to know is why doesn't STiK work with Magic4, all that happens
is that once a connection is established the SD led flickers constantly and the
system sometimes locks.

The only exceptions to this are the Task Manager and the Geneva Manager menu, which use a Geneva-specific function call that (apparently) no other item selector intercepts.

If the authors of any item selectors would like to know what call to intercept, I could pass along the info. It should be a fairly trivial thing to add.

Actually, Dan, I think it's the other way around. At least, this Pentium/100 here on my desk can't do anything else at all while it's formatting/copying to floppy. My Mega STe does it regularly, using the HDformat CPX; I get and process mail packets while formatting two floppies at once.

You might want to look at the later sources for nos PPP on
ftp.demon.co.uk somewhere in the pc directory I think.. The PPP in the
atari version is not 100ompatable with some ppp implimentations now
because of some hacks done in the original ka9q demon released some
patches for the pc version but nobody implimented them into the atari
version. I will have a look for the source myself and if I find it
pass it onto you.

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months. think about it. You see those 'Make.Money.Fast' posts more and more. That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, whats $5.00, I spend more than that in the morning on my way to work on coffee and cigs for the day. So I sent in my money and posted. Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began recieving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM. By the end of the fourth week, I had recieved nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill, money order, or bank note inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1- Fern Suarez
Mallorca 112
Hato Rey, P.R., USA, 00917

2- Philippe
2104 De Mexico
Chomedey, Laval
Quebec, Canada
H7M 3C6

3- Natalie Jansen
Lancveldlaan 18
5671 CN Nuenen
Holland

4- Chad Collier
2785 Cold Springs Rd. #49
Placerville, CA 95667

5- Steve Boltinghouse
1009 Bird St.
Hannibal, MO 63401

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are Article Unavailable

2044. {UK} ST Survey {UK}

Newsgroup: comp.sys.atari.st
Date: 1996-11-05 00:00:00 UTC
From: James@grunt.demon.co.uk
Message-ID: <32985bc0.1008694@news.demon.co.uk>
Source record: 134579

If you reply to this survey you will automatically get the results.
Only UK users please...

[1] What ST model(s) do you own?

[2] What memory do you have (multiple users give main machine)

[3] Hardware you own:
(a) Hard drive
(b) 2nd disk drive
(c) Modem (?!)
(d) Mono monitor
(e) Colour monitor
(f) Accelerator
(g) Others (give details)

[3] You use your ST for:
(a) Internet
(b) Business apps (eg. wordpro, spreadsheets etc)
(c) Games
(d) Music
(e) Specialist apps (give details)

[4] Spending on your ST each month?
(a) Under ï¿½25
(b) ï¿½26-50
(c) ï¿½51-99
(d) ï¿½100 plus (!?!)

[5] Name your 5 best software apps you use

[6] In confidence, your atttude to piracy
(a) I have no truck with it
(b) I have pirated in the past but not now
(c) I pirate some of my software and buy some
(d) I pirate all of it (naughty scumbag!)
(e) Sorry I am paranoid and won't answer!

[7] The future of ST?
(a) Has none.. sorry but it's a has-been that I love
(b) Survives only for specialist work such as MIDI
(c) It's kickin' (!?!)
(d) I like STs but now mainly use another machine (PC,Mac, Amiga etc)

[8] Give us funny one liner to make our survey results more
interesting!

Thanks for the spelling correction .. this is second time that I have
been corrected .. Mr. Gene Buckle being the first to correct me, but I
don't mind.

Actually, I am glad that some people knew who Mr. Kildall was and where
GEM came from. Now, does anybody know the name of the original company
before it shortened to just Digital Research, Inc?

2046. Re: Newsie

Newsgroup: comp.sys.atari.st

From: jdaddin9@airmail.net
Message-ID: <55o80g$lmf@library.airnews.net>
Source record: 134581

I just got Newsie yesterday and it seems like a great program. The only real problem I have is that, like others I've seen post here, it seems to 'bomb' when you exit the program. I'm running it with MiNT so it's not as obvious, but when I exit, I see an illegal exception error flash on the screen.

-----BEGIN PGP SIGNED MESSAGE-----

It isn't often that spammers announce in advance of spamming that they
intend to spam, but here that's exactly the case.

This is part of the, by now (I hope), well-known "meow" spamming.
Note that only large spams or sections of spams are cancelled out of
news.admin.net-abuse.misc, and that these cancelled articles will
probably be reposted in that group by the program Dave the Resurrector.

The articles are effectively cancelled out of all other listed
newsgroups. For a limited time, the cancelled articles can be viewed
exactly as they appeared on Altavista (http://www.altavista.com) at
the URL http://www.crl.com/~sjkiii/cancellations/articles .

I also make the note that over half these articles have almost
certainly been forged with the address mlb61@bu.edu, one Matthew L.
Bruce. As of yesterday, the *real* Matthew L. Bruce had probably not
posted to Usenet in weeks.

13 articles have been cancelled in 41 groups. The Breidbart Index for
this portion of spam is 21.65 .

Followups to this report should only be made to
news.admin.net-abuse.misc .

I don't think you read it wrong at all. I got the same impression when I read it. Toad _has_ been pushing their Pentium based Gemulator package for a while now. Not really surprised actually, just a little disheartened. Hope they keep a warm spot in their hearts for us Atarians.

Hi, The answer is pretty easy, you have to reconfigure your NVRAM. A
program like bootconf can help you. There is an archive in my page
that contains all the little utilities for the falcon and other too.
Bootconf is included in the util.zip file.

Hi, There are 2 little program I would like to have. And I was out of
luck to find one of them.
1 would be a small accessory that would play MID files. I know that
theres a lot of atari users who have a sound expander or at least a
synthesiser. The atari was/is the midi machine. And if CAB could use
it as a MID player it would be cool too..
2 would be a little auto program that emulates the controle key when
we press the right mouse button. Like this we could move files only
using the mouse. This would only be enable when we are on the desktop,
since some program use the right mouse button.
I think it's unfortunate that we can not use the right mouse button
on the desktop..
That was just some thoughts, thanks .. bye..

2059. FS: ST games and software

Newsgroup: comp.sys.atari.st
Date: 1996-11-05 00:00:00 UTC
From: Young <socrates@aa.net>
Message-ID: <327F8AF1.41B0@aa.net>
Source record: 134594

I have the following Atari ST games and software for sale. All programs are complete with box and docs (unless noted otherwise) in excellent condition.

These have been sitting in a box in my closet for the past few years. The last time I checked (a couple of years ago), all the programs worked fine. I can't think of any other reason why they wouldn't work now, but everything is sold as is.

I'd very much like to sell these, so please make an offer if you don't like the price. I'm open to negotiations (and trades for PC stuff or Atari 8bit stuff).

If you have any questions, please email me at socrates@aa.net.

Buyer pays for shipping (probably $3-4 or less if you don't want the box).

Thanks. Hope to hear from you.

I have a STf and a Mega4/STE which I would like to connect together in my own little household LAN. Anyone done this?

I guess I would try to do it under MiNT although I've never been able to get MiNTNET running because I can't install MinixFS. Thus tar.ttp crashes when I try to decompress files which are > 8+3.

So what else... What ports should I use?

The Mega4/STE has a LAN port. Can I somehow connect this with the com port of the STf? I would expect that I would have to connect them via com ports or serial ports.

Thanks for any enlightenment,

Jonathan

Hi!

I have a 1040 ST and Megafile 30 and have gotten myself very stuck!

I have just tried to install a screensaver (RUBRICKS.ACC) by putting it on my C: drive. When I restarted, the Atari Hard Disk driver loads from the hard disk but as soon as that is done the whole thing restarts. This continues in a continuous loop, so I can't remove the XYZ.ACC that seems to have caused the trouble :-(

I've tried starting from a floppy with AHDI.PRG in the AUTO folder but when I do this I can't see any of the hard drive disks.

Please help! How can I remove the RUBRICKS.ACC program???

Thanks!
Jeff

I was looking into getting an Atari Computer again(it's been years), and was wondering if anyone could update me on what's happened.

Is Atari still around even?

And besides that, if I were to buy an Atari Computer, which would you recommend. I am looking for something inexpensive($1500 or less) and can easily be upgraded to run faster or better.

Was looking at the COmputer DirecT40, with the PCI car pentium. That would be nice, but...$$$...

Suggestions?

You did everything right sofar, next thing to do is highlight A or B
drives icon by single clicking on it, then install an icon for drive C,
double click the C icon and you should be in!

Okay, here's how this multitasking lark works...

A computer is able to take turns running all the different programs and accessories at the same time much like a housewife vaccums the rug, talk on the phone, mind the kids, and watch TV. But TOS(or MagiC) runs each program, or process, in a frame of time...which is really too fast for humans to comprehend.

Basically, you just click on a window of any program you want that's already loaded without having to quit anything. But the processes, or programs, that are not active(you're not using) still run in the background. So you can still type a letter while another program is downloading something.

There are two types of multitasking, one is "co-operative" meaning the computer switches to another process when an AES call is made. That's when you move a window, use a menu bar, or just wait for user input. If you run programs and accessories that are in a window and have access to a menu bar, then it's "multitasking friendly".

The other is "pre-emptive", where the operating system automatically does the switching without waiting for any calls. The only bad thing is that it slows things down a bit. Again, it's best to use programs that have windows and menu bars just for you to be able to click on other program windows.

Geneva is a co-operative system that runs on top of TOS. But with up to six accessories and a proper GEM application, you can still multitask between these if they all have the windows/menu bars (meaning nothing in dialog boxes).

MagiC and MiNT are preemptive systems and are quite powerful. MagiC is even faster than TOS so it helps out with the speed of multitasking. You can even run Geneva on top of MiNT so Geneva can now be preemptive.

Right now, I'm running the STalker program and STeno accessory. They work together like one program smoothly. And if I'm downloading something, I can play a Breakout game that's an accessory. And I'm only using regular

TOS! :)

Hope this helps...

Best thing to do is to get Superboot as this can switch on and off any
Auto program and accessory. I just got a hard drive and this make using
it a whole lot easier.

Though you to get it on your hard drive to get it to work.

There was a posting last Sunday that the LAPD Public Domain web site has a copy of it. I wish I know what the URL is since I don't remeber web sites, which is what hotlists are for BTW :)

But on that same day, I got a hold of a copy from a user's group meeting. So in this emergency, I'll e-mail Satcom2 (real name?) a copy.

BTW, this is a cool game if you were into Miner 2049er or other older platformers. It's another example of a fine remake of a classic game for the ST. "Emulators, we don't need no stinking emulators!" :)

This works, I did it and have already received $682.00 in the past
week.

**********Hello!
I've got some awesome news that I think you need to take two
minutes to read if you have ever thought "How could I make some
serious cash in a hurry???" , or been in serious debt, ready to do
almost anything to get the money needed to pay off those bill
collectors. So grab a snack, a warm cup of coffee, or a glass of your
favorite beverage, get comfortable and listen to this interesting,
exciting find!
Let me start by saying that I FINALLY FOUND IT! That's right!. I
found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes
like multi-level marketing, mail-order schemes, envelope stuffing
scams, 900 number scams... the list goes on forever. I have tried
every darn get rich quick scheme out there over the past 12 years. I
somehow got on mailing lists for people looking to make money (more
like 'desperate stupid people who will try anything for money!').
Well, when I was a teenager, these claims to 'get me rich quick'
sounded irresistible! I would shell out $14.95 here, $29.95 there,
$24.95 here, and another $49.95 there. I had maxed out my new Circuit
City Card AND my Visa...I was desperate for money!! So, I gave them
all a chance but failed at every one of them! Maybe they worked for
some people, but not for me. Eventually, I just tossed that JUNK MAIL
in the trash when I got the mail. I recognized it right away. I can
smell a money scam from a mile away these days, SO I THOUGHT....
I thought I could sniff out a scam easily. WAS I WRONG!! ....I LOVE
THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to
GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just
have to see what schemes could possibly be on the internet." The
article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE
AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well, the more I thought
about it, the more I became very curious. Why? Because of the way it
worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE
STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe a tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail'for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the mostdetailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following:
"Please add my name to your list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be be 3, 5 wil be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse'

to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like..."Get one million dollars flooding in your mailbox in two days!"

You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM
Article Unavailable

I need someone with some insight to give me their opinion councerning an Elective. Which of the following would be the best choice for a student who is absolutly terrible with math skills. Geology, marine science, environmental science, chemistry, astronomy, biology. Which of these courses would you think are the easiest and which one would be the most difficult. Thank you in advance.

2074. Okami still developed?

Newsgroup: comp.sys.atari.st
Date: 1996-11-05 00:00:00 UTC
From: josk@stud.ntnu.no
Message-ID: <327fdbb419ab9d0@stud.ntnu.no>
Source record: 134609

Does anybody know if Okami is still being developed? The version I got (0.26) is dated 31/10-94. It's a great program, but some things needs to be fixed: It's too hard to set up, and the interface needs a facelift.

You must run DRVIN and SCC before MINT.

Bye! Bruno.

Source record: 134611

In article <55lcve$efa@mercury.cc.uottawa.ca>
nobody@nowhere said:-

> I would like to know how to set the baud rate of my system running the
>latest mintnet to greater than 19200, which is the max the modem cpx goes
>for Modem 2.

You can set up to 38400 bps for Modem 2 in the pppd parameters, or
install HSMODEM and set 134 or 150 in the CPX to get 57600 or 115200 bps.
Pppd can use any previous speed, but can set only from 300 to 38400 bps,
so for other speeds you must use the CPX.

Bye! Bruno.

========= ORIGINAL POSTING =============

-----BEGIN PGP SIGNED MESSAGE-----

It isn't often that spammers announce in advance of spamming that they
intend to spam, but here that's exactly the case.

This is part of the, by now (I hope), well-known "meow" spamming.
Note that only large spams or sections of spams are cancelled out of
news.admin.net-abuse.misc, and that these cancelled articles will
probably be reposted in that group by the program Dave the Resurrector.

The articles are effectively cancelled out of all other listed
newsgroups. For a limited time, the cancelled articles can be viewed
exactly as they appeared on Altavista (http://www.altavista.com) at
the URL http://www.crl.com/~sjkiii/cancellations/articles .

I also make the note that over half these articles have almost
certainly been forged with the address mlb61@bu.edu, one Matthew L.
Bruce. As of yesterday, the *real* Matthew L. Bruce had probably not
posted to Usenet in weeks.

13 articles have been cancelled in 41 groups. The Breidbart Index for
this portion of spam is 21.65 .

Followups to this report should only be made to
news.admin.net-abuse.misc .

2081. Atari Computing Press Release Oct '96

Newsgroup: comp.sys.atari.st
Date: 1996-11-05 00:00:00 UTC
From: cgood@cix.compulink.co.uk
Message-ID: <E0DEx6.C7t@cix.compulink.co.uk>
Source record: 134622

Press release October 1996
==========
Mike Kerslake, a magazine publisher with over fifteen years experience has teamed up with Joe Connor, ex Reader Disk/Public Arena editor for Atari World to create a NEW printed Atari magazine called Atari Computing.

The first issue was launched at the recent Atari shows in London and Birmingham and completely sold out both days! Delighted by the response we've reprinted Issue 1 so if you want to get your hands on this collectors item and join the queue for Issue 2 you need to move fast.

Issue 1 featured contributions from respected and well known Atarians including Graeme Rutt, Jon Ellis, Nial Grimes, Mark Baines, Denesh Bhabuta, Kev Beardsworth, Colin Fisher-McAllum, Harry Sideras, Howard Carson, Xav, Carl L�fgren, Thomas Binder, Al Goold, Chris Good, Ed McGlone, Roy Goring, Neil Martin, Richard Spowart, Chris Holland and Steve Llewellyn.

We've also signed a deal with the two leading disk based magazines, AtariPhile and Maggie to publish regular sections within the magazine. If you've never seen a disk magazine before we think you'll be amazed to find out how much you've been missing!

The Atari Computing launch issue included
---
* News and gossip put together by Graeme Rutt.
* Reviews:
HD-Driver - by Jon Ellis
Deadlands - by Nial Grimes
Kandinsky v2.5 preview - by Kev Beardsworth
E-Copy - by Colin Fisher-McAllum
CoSTa - by Neil Martin
MagiC v4 - by Kev Beardsworth
MagiC v5 preview - by Thomas Binder
* PD/Shareware reviews of AudioCreate, CPU MOD, Pysgham, Start Me Up!, ST-Guide, The filler, CoMa, AppLine, Graph, STD Codes, Maggie 20, Croft Soft Newsletter, 7up, Warp, Maggie 20 and INcontrol reviewed by Joe Connor, Denesh Bhabuta, Carl L�fgren and other reviewers.
* Features:
Music and MIDI primer - by Ed McGlone
RSC file editing - by Mark Baines
NeST primer - by Harry Sideras
BBS primer - Colin Fisher-McAllum
DIY project to add joypad to STe - by Xav
Hard disk primer - by Howard Carson

* User group reports co-ordinated by Al Goold
* Guest sections:
AtariPhile
Maggie
Calamus User
* Reader disk including ST-Guide, MagiC utilities and GEMTrek
* Letters, obituraries for Atari, ST Format and Atari World
* Q&A section, our team of experts are kept busy!
* And there's more!

Background

Following the closure of Atari World earlier this year it was announced ST Format, the last surviving UK newstand publication, has also closed. It's the end of an era in the UK which for the first time since 1987 has no Atari newstand presence.

The men in grey suits are telling us to move onto other platforms but hang on a minute, let's take stock of the situation...
- Atari machines can be purchased and repaired on a shoestring
- Atari machines can produce superb printed output
- Atari machines can surf the Internet and run BBSs
- Atari machines can form the nucleus of a digital music studio
- New software of better quality than ever before is still being released!

That doesn't sound like a dead platform! The Atari platform has been emulated by just about every other platform, we're owners of cult machines! Have you ever noticed ex-Atarians animatedly talking about the 'Good old days' it's a feel good factor missing from all the current machines.

We don't need a new platform but we do need information and a printed magazine is undoubtedly the best way to ensure we see in the millenium!

Apart from a darn good read the other thing most of us like is some new software to play with. The Reader Disk concept offers all readers the chance to get their hands on the hottest new software around along with exclusive versions not available anywhere else. We intend to offer one Reader Disk to accompany each issue, buy it or not, the choice is yours!

What we need, now more than ever before, is your support. It's going to be tough to keep going so we're initially planning bi-monthly releases -but this could change, it's really up to you! Instead of wishing us luck post a cheque to order your copy today!

Ordering
==========
As we're sure you'll appreciate launching a new magazine is a risky business and our print run will be conservative - we don't expect to keep a stock of back issues for long.

We're not a newstand publication so don't bother looking in the shops. The Atari platform needs this magazine and we need your subscription so do yourself and us a favour, take out a subscription or order an evaluation copy today!

Subscriptions

Many of you (and most of us) lost money following the Atari World debacle and we're determined not to make the same mistake. Atari Computing subscriptions are refundable at any time. Cancel your subscription in writing and we'll return any outstanding credit to you, minus a deduction to cover our costs.

>me thought they'd have enough copies :p

Haaa that wasn't clear in the original posting, and has started quite
a thread hehehehe, So you subscribed AFTER they sold out!, The point I
tried to make was that a subscriber should be gauranteed a copy before
people are allowed to buy, it would see that comment was not needed
now we know ....what we know :)

Cheers.............!ynoT

[the rest of my posting-quote deleted here to save bandwidth]

PS. There's no need to quote a complete posting you know!
It's enough with just a couple of lines so people get an idea about what
you're replying to...

>You might try stripping all the boot prg's out of the boot partitions
>and then re-installing only the one you want. If you go back to icd's,
>don't forget to run the config program. My, sure gets screwed in a
>hurry, doesn't it? Wish you luck.....j

I've deleted ALL files from the harddisk (I have another one for backup),
and I've tried to re-format the drive, but for some reason it won't!!!!
I get the same result with ICD's and CBHD's software. The drive just works
for about 3 seconds and returns to the respective program.
Not what I've experienced in the past with formatting as it takes a loooong
time!

>-I've been hearing a lot about CBHD and am quite curious now as I use
>ICD 6.5.5 currently...

Well, that's what they say. I was quite happy with my ICD 6.5.5. software
until I started having problems when experimenting with installing MiNT.
I got some error messages.

Then I tried to install CHBD resulting in a lot of bombs etc.
Fortunately I have two hard-drives, and I formatted/partitioned/installed
the driver and everything using just the CBHD software to be sure it worked
fine, and it did!
It's slower to boot than ICD's driver, but I'm sure that has something to
do with the setup parameters (I'm not that much into technical German, so I
don't know what to adjust), but my overall feeling is that files are
accessed faster by the harddisk...

And best of all- the error message I got with MiNT went away after
installing CBHD.

But as you might see from my other postings I'm having very big problems
with my other drive, but not just with CBHD- I just wish I hadn't touched
it... It worked fine with ICD's software, and I could have forgotten about
MiNT.

yeah, I get the impression that file loads/copies etc. work faster with
CBHD.

>Here is how I did it - maybe there are some unneccesary steps here but this
>works:
>
>1.Have the machine in normal ICD boot up configuration.
>2.Re-name ICDBOOT.SYS (e,g. to ICDBOOT.SYX) to stop it being loaded.
[...]

Sounds like good advice- I'll keep it in mind for later.
I did a "clean" install with my second hard drive which I use for backup,
just to see if I could get it working- so I put "cbhd.prg" in the auto
folder of a floppy disk, booted with the disk, then ran "cbhdconf.app":
formatted and partitioned the drive and finally copied "cbhd.prg" over to
partition C:\, renamed it to "cbhd.sys" and loaded/saved it using the
configuration program. Worked fine and has since, but the biggest problem
now is to get my main drive working again! It just won't format!
When I try to format it with either ICD or CBHD the drive just works for a
few seconds then returns to the program.

>Note that Claus has specified the driver file, in the config. program, as
>"cbhd.sys" rather than "CBHD.SYS". Tis means you have to fiddle with the file
>selector path. I have tried to change the CBHDCONF.APP binary but this will

>not work as it performs a checksum on itself before executing!

Yeah, I noticed. Beats me why they would name it with lowercase letters
when TOS is in all-uppercase!?! Works fine with the "Selectric"
file-selector though, which shows lowercase filenames, but I was advised to
install a driver with no accessories or auto programs.

>The facility I miss is that to specify the device search sequence on boot-up.
>My boot device happens to be set to ID 1 which means that the CBHD driver
>spends some time interrogating ID0 when there is no device there!

Hmmmm... I'm using IDs 5 and 6. Know of any way to make the boot-time
shorter? ICD's driver was a lot quicker to boot- it even had a feature
where you could shut off un-needed IDs, so they just got skipped.
I didn't see this in "cbhdconf.app".

>I have run the demo version of HDDriver 6.0. This seems to have a similar
>performance to CBHD.

And it's a commercial program.

Martin,

I've used many file selectors with Geneva. All you have to do is put
the executable for the one of your choice in the AUTO folder.

I think it's 4096bytes, but yes that's right.

h> Ah! I see.
h> I just had a look at my newdesk.inf and it's at 4148 bytes...
h> No wonder I get that message then. Do you know of a way to allocate
h> more memory for this file?

The only way I remember is to install WINX first and the SHBUF, the latter of
which needs to be renamed to SHBUF8 for an 8kb Newdesk.inf file (ie sizes
itself from its own filename like FOLDERnn or CACHEnn).

Beware of memory loss due to WINX...

2092. Re: CAB on Falcon? Yes it works for me :)

Newsgroup: comp.sys.atari.st
Date: 1996-11-05 00:00:00 UTC
From: guitarra@afn.org
Message-ID: <55mh08$5gq@huron.eel.ufl.edu>
Source record: 134633

Ok, I use jar10.prg on the Auto Folder and not the Stik module.
Why? Because that way I can run Stik at any time, also I use Neodesk which already needs Jar10.prg

I do not use Stik to connect to SLIP , Instead I use Stalker and then after I
use the regular terminal I press the keys CONTROL/UNDO and it allows me
to reconect to SLIP, then I just type the IP to Stik.

I use this trick under Magic C 4 and Geneva and CAB/ANT mail work perfect
on my Falcon.

I use the old Stic which works with Jar10.prg
it is version 01.07 and I do not plan to change it as it really
works perfect.

One thing if you use Staker to dial and conect, it is better because it will
dial in the background . After conecting to SLIP put Stalker to slip under Geneva or Magic as CAB or Ant mail will work way faster.

I hope this helps you all.

GUITARRA.

I had this problem before. . .

There is an easy solution- use a program that initializes the modem port
prior to using a comms program on MM. I used to use AOL, and cancel the
program right after it started dialing the number. There SHOULD be an
Atari auto program that you can do this with, however . . .

h> seconds or so then returns to the program! Just like it refuses to
h> reformat the drive! Could it be that low-level formatting might be
h> necessary? In case it is, what do I do?

The CBHD driver contains configurable parameters to be used when driving the SCSI bus. I wonder whether these may be inappropriate for "long" operations like FORMAT? It sounds like a command time-out from the HD.

I am using CBHD successfully now but have not tried the Format option as it seems to be quite happy with my ICD AHDI-compatible formatted drive. The CBHD documentation I have is very thin and gives no clues about setting the SCSI driver parameters.

h> BOOTFIX.PRG
h> -----------

h> Oops! I think I've run this program several times... could I have
h> "damaged" the software inside the drive because of this?

I don't think this will have caused the problem Hallvart as BOOTFIX is very choosy about which drives it will modify - I had a poke around in the code once (forget why!) and found a table of around 4 devices which it would write to.

h> now the Quantum drive seems to act differently when I format it with
h> ICD's software as well! (it only "formats" for 3 seconds or something
h> and then returns to the program).

:(This goes against the theory above! Unless, of course, you are using the ICD formatter with the CBHD driver.

h> I hope all of this doesn't mean I don't have to buy a new drive!

Mmm ... have faith! Does a SCSI bus scanner still report the drive as a Quantum 520S? If not you may well have overwritten the HDs microcode pages - it's a factory job to get them re-written AFAIK.

Hi mcharvey@earthlink.net, on 02 Nov 96 you wrote:

m> are there basic commands common to ttp programs? i launch the ttp,
m> and don't type anything in the command line. command instructions
m> flash by at a few hundred miles an hour, and then i'm dumped back to
m> the desktop. how do i pause the screen output so i can read the
m> directions?

You can try hitting CNTL+S - this will stop the screen display. (CNTL+Q to
start it up again).

If you are running TTP from a shell, like VT52, there is often a setting you
can make which holds the screen before exiting the shell.

Some TTP programs implement a "page-mode" display (try -p as parameter) which
wait for a key after displaying 24 lines.

From: bjr@edison.ebicom.net
Message-ID: <55mo83$893@einstein.ebicom.net>
Source record: 134639

NeoDesk 4 lets you do all this...and more...
You can place Icons on the Desk Top...
You can create "Group Windows" where you can name the Icons independently
of the file names...
You can create NPI files...which allow you to enter parameters, pipes,
and even environment tables for a particular application - these show
up as icons that can be named indepently of the actual NPI file name.
You can also create hot key and macro combinations.

This only scratches the surface...

Format floppys, move, copy, erase files in the background...
Have NeoDesk remove itself from memory when launching if need be.
Edit and create icons...
Change desk top and window fonts...
Put pictures or patterns on the desk-top...
Put the whole desk top in a window...
Run it as a program or an accessary...
View IMG, Degas, BMP, and other picture formats.
Much Much More...

NeoDesk 4 works with Plain TOS (any version) Geneva, Mint/Geneva, and
MagiC.

Yes, the mailbox file should be in maildir. What's the name of the
unpacked file? It should be `josk'.

Hi,

I want to connect a ZIP-drive to an Atari ST with a ICD-Link II DMA to
SCSI connector.
I heard that some modifications must be done on the Link to use the
ZIP directly with the ST.
Does anybody have experience with this, or do you have a schedule to
modify the cable ?

Best regards,

Walter

>is.

ON the Main Menu in PINE hit S for setup then C for configure and the
first item on the list is Personal-Name hit c to change whats there! Type
your full names and hit return to accept changes then follow the prompts!
All the commands are at the bottom of the screen! It's dead easy! At least
compared to figuring out what some of the other options in configure are
for!

You have a quantum fireball 540S, right ?

I formatted a few of these & they appeared to format in a few seconds.

They worked afterwards too !!.

Do you get an error message ?

Compare this to a seagate ST5660N, which can take 15 minutes to format.

Maybe your drive is o.k, have you tried partitioning ?

Is it possible to use another fileselector than Geneva's built-in selector?

Sure is! Just install it in the usual way. Geneva's "Open File" function will use its own selector but all your programs should use the replacement. Take care with Freedom though. It works but doesn't draw quite correctly and - whatever you - don't iconify it!

Regards
Martyn

I checked the validity of the address when I added it to my sig file so
it should work. CommUnity is a loose pressure group which brings together
people on Fido networks and the Internet. We aim to respond to threats to
electronic comms with reasoned arguments and persude those making the
moves that they're wrong. You'll see that if and when you manange to
reach the Web page. Keep trying - it's well worth it.

End of commercial!

Thats right...just run any demo that will work in both VGA and RGB
mode and look at the speed difference. The only thing I hate about
some of the new Amiga monitors is the price...Electrohome, CDS, and
others are around $550.00 and up...IF you can find a NEC 3D in good
shape (they usually sell for $200-299.00) thats a good way to go too.

PS Or were you referring to the newer Escom produced
monitors (and Microvitek?) (sp?)

Later...! :)

Source record: 134469

Yes, in may a compagny release 2 amiga monitor that are fuly
compatible with atari.
And they sound realy good.
One is 15", and the other 17".
They both support the st resolution like the nec3d did/does.
But they are new. I couldn't get the price yet, but if some ppl are
interested, I can search.
Of course, higher resolution are available too, perfect for graphic
card and falcon resolution.

>For the Falcon, just get an SVGA. It will display all resolutions. The
>only things you can't run are demos; but then if they're not programmed
>for standard equipment, theyre not really demonstrating anything, eh?

No, SVGA's _cannot_ display all resolutions. In fact very, very few
SVGA's will sync down to 15kHz which RGB-resolutions needs. That's
why many demos and quite a few games won't work, they expect a 15kHz
display mode. And although I would agree that SVGA-monitors generally
are better than RGB ones, RGB-monitors (Like the good old SC1224 or
the (spit!) commodore 1084s.) needs only half the bandwidth that VGA needs,
thus leaving more for the CPU. That's why democoders prefer RGB.

For a good Multiscan monitor, get one of those new Amiga-monitors.

Hi, First you'll need a SCSI drive fast and big enough to be able to
D2D.
Then you'll need the software.. Most of the D2D program offer the midi
capability. Such as Cubase audio and logic audio. (the 2 best ones,
IMHO). If you are really poor and still want to do 8 tracks digital
audio recording you should look at some less expensive software like
Quincy (sounds very good), or Digital audio or Audio tracker..
They are very good too, not as complete and professional as could be
cubase or logic, but still very good..And the price very reasonable.
Bye..

2134. First news about the Phoenix040/060 (previously called Cent40/60)

Newsgroup: comp.sys.atari.st
Date: 1996-11-06 00:00:00 UTC
From: Katherine L Ellis <kellis@primenet.com>
Message-ID: <Pine.BSI.3.95.961107000343.26218A-100000@usr11.primenet.com>
Source record: 134475

Hi!

Here are the first informations about the Phenix, Atari GEM compatible:

Processor: Motorola MC68040 66Mhz or MC68060 120MHz
Bus: 32 bits 33MHz
Ram: 64 bits interlaced
extension to 128Mo thanks to SIM 32bits technology
DSP: 56302 66MHz (66 Mips) with 6 32 bits DMA channels
DSP port & possiblity to put a second DSP
IOP: 683xx to manage 4 serial port
1 parallel port

Dedicated processor to make vocal synthesis (high quality)

3 slots PCI 32 bits

Graphic Card PCI:
- Matrox Mystique (1280x1024 16Millions 2Mo RAM)
- Matrox Millenium (1600x1200 16Millions 2Mo RAM) for professionals

2 slots for Audio/Midi cards in two versions:
- 16 bits, 2 inputs / 4 outputs with Codec Surround (compatible Falcon)
- 24 bits, 8 inputs / 8 outputs + S/PDIF-Pro interface

2 slots 'direct processor 040/060'

Standard PC keyboards (105 keys) and 3 buttons mouse (9600Bps)

Tower or Desktop, color: black or dark grey

Flash Eprom 64Ko for the kernel of the OS ("Dolmen") which allows to upgrade easily your system

Compatbility with the AES part of the Tos

Some remarks: The graphic part of Dolmen (the OS) will be installed on the Hard drive disk. The 56302 is compatible with the 56001. The Input Output Processor (IOP) can ben used as a 'super-blitter' thanks to his DMA channels. The cheapest configuration (040) will include a 'Mystique' Video card, a hard drive SCSI-2 1Go, a 1 CDROM SCSI-2 4* and 8Mo of RAM and will cost less than 10000Frs TTC (something as 2000$).

If you think you could make something for this computer (developping for example), you should contact Centek at:
28, rue des Sorbiers
60290 Laigneville
FRANCE

or by phone/fax: +33 03 4471 5504

Anyway you can send me the message and i will transmit to the conceptor of
the Phenix.

Bye
Xavier Lacroze

>looking for a second-hand TT or Falcon tomorrow. A normal person would
>not do such a thing.

No flames but...<grin>

I just picked up a 2nd hand Falcon that was less than 2 years old, has
4 megs of Ram/340 meg hard drive/14400 modem/and a ton of software for

--> $400.00.....

I wouldn't want to try to buy a Mac/PC for that amount and still not
have the beauty, grace and elegance that is TOS/GEM... :)

I do not believe its insane to invest in a TOS compatible computer...
I recommend TOS systems for my whole family and friends! Just got 2
more people where I work to buy Jags for $59.00...(beat that Nimbimbo!)

2138. FS: Phase-4 3D animation and rendering system

Newsgroup: comp.sys.atari.st
Date: 1996-11-06 00:00:00 UTC
From: "Dr. Simon G.K. Williams" <williamssg@cf.ac.uk>
Message-ID: <E0GLyy.K96@cf.ac.uk>
Source record: 134479
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have the following for sale:

Phase 4 3D animation system, the BEST 3D software for atari computers!
Comprises the following packages ;

Chronos 3D keyframe animator software with dongle (separate versions for
ST, TT and falcon)

Phoenix 2 - full 24-bit rendering software for stunningly realistic solid
object rendering, with textures, image mapping, shadows, multiple light
sources, fully compatible with MagiC and large screen displays, and
graphics cards.

ANM-Link - the necessary stuff to use the powerful phoenix rendering
engine with Chronos animator

PLUS: lots of other cyberstuff for designing 3D objects, text, massive
object library including dinosaurs, spaceships and architecture. ALSO 3D
fonts, cybercolor and cyberpaint, etc etc....

Well the entire system cost me well over ï¿½300, not to mention the postage
and taxes to get it all from the states! But, I'll offer it all, with
postage within the U.K. for ï¿½100 ! If your interested in doing animation
on your atari system, this is the kit! All manuals and so on included.

I found JNOS is more updated then DIN NOS, so I took ppp sources from there,
I think I will port all JNOS thing, as it seems better.

The old NOS from David Nash is now working with an updated ppp, but I will
soon release a completely new thing, based on JNOS.

Yep, I had a nice (29th) birthday, thanks! Version 7.0 will be available from
DC, somewhere in January 1997. That is...I will send it to them by that time.
They are always behind on versions (have been for quite a while, years
actually) so your best bet would be to get it from me direct. For people who
live in Europe and who pay in British pounds I have an offer: Send 10 British
pounds in cash (or via IMO) and you'll get 7.0 and, as soon as it's finished,
the first update after that! That way, you'll have absolutely no delays and
will get everything directly from me.
This offer won't be valid for US customers, as they would have to contact
Oregon (who will continue to do business directly through me as well).

2144. No harddisk on startup

Newsgroup: comp.sys.atari.st
Date: 1996-11-06 00:00:00 UTC
From: Kent Johansson <kentj@medea.se>
Message-ID: <01bbcbee$38061bc0$1075f482@NTSERV1.MEDEA1>
Source record: 134485

It seems like harddisk problems are a popular subject <G>.
So here is my problem:

I have a Mega ST 4 with tos 1.41 (aka Rainbow tos) and a Megafile 60.
I bought the lot some while ago when I wanted a Atari again. The guy
who sold me this said that the problems with the HD was due to a defect
cable. I borrowed a cable from a friend that works, I even borrowed his old

Mf30 and it worked on my Mega.

When I power on the computer (starting the HD first ofcause) with the HD
connected I don't get any icons at all. It starts up very quickly also (a
second
or two). If I first start my ST and then the HD and run some ICD utilitys
that
came with the computer I can get a identification of of controller but
nothing
else seems to appear.

What's wrong? Should I scrap the lot and buy a LINK and a ZIP drive or is
it
worth reparing?

Anything helps.

Regards
Kent Johansson

In article <dcable-0311961908350001@ana-mi7-20.ix.netcom.com>,
dcable@ix.netcom.com wrote:
>In article <3274e2922f4492@sn.no>, hallvart@sn.no (Hallvard Tangeraas)
wrote more on his unhappy experiences attempting to install Mint. He said he
suspected that his ICD software, especially ICDboot.sys v6.5.5 seemed in some
way to be the cause of his problem.
My experience of ICDboot.sys v6.5.5 has also been an unhappy one, but late last
night, I decided to get down to some tests just to accurate about my diagnosis.
My problem was: after opening a window and browsing a subdirectory, maybe
running a .prg, clicking on the close-button would close down the entire window.
Opening subsequent windows would cause a growing box to appear, then vanish.
Pretty soon I could have my desktop showing nothing but the drive icons, and the
trash can, but, opening an icon would bring the "GEM has no more windows - close
a window" warning. The "Disk" menu would have the middle 3 options (format,close
window, close) available, but all others were greyed out. Of course I would
"Close Window" and then watch as phantom shrink box shrank.
Well I went through the hoops no .acc s no auto .prg s, but the only thing that
seemed to work was booting from floppy, then installing the drive/partitions.
That was when I got the hunch. I threw off the desktop.inf (we are talking Tos
1.62, Tos 2.06 arrived only an hour or so ago, cheers dennis). Made a new
desktop.inf in the orthodox Options menu fashion and when I left the machine, at
2:30am, all seemed to be well.

The point of this? Well, I've just wiped my eyes past a whole load of posts,
and stopped at this thread because our friend Hallvard, has also reported that
his newdesk.inf exceeds the max permitted size.
May I tentatively suggest that a corrupt newdesk.inf or desktop.inf plays merry
hell with the otherwise excellent ICD HDD suite.
Anybody tramped this road before?

regards
Allan

> archive. Is anyone else with a Falcon doing this???
>

Yes!

I've had very few problems with all of the STiK/CAB packages so far released,
but the latest versions of CAB.OVL (1.20 and its fixed (NOT!) version - 1.20h
that is currently on Flinny's homepages) have given me no end of bombs and
Runtime Error 136 or 163 or whatevers!

It's a pity because everything else had been going swimingly (apart from that
jpeg bug which has been in every version - even when the only way of d/loading
jpegs was to set up an external viewer in one of the slots - and still wouldn't
get all the data: the hours of fun trying to get the weather pictures from
CNN's web-site....!)

Anyway, I digress.

You're right, if you want to use CAB 1.41a (a mighty fine program) and until
there is a working CAB.OVL update, use the CAB.OVL from www131.zip (I think its
version 1.18).

This way I would bravely guarantee you no bombs, crashes, or runtime errors -
I've not had any for many, many months now.

When will this end?!?!!?! Maybe I'm supposed to be a little better humored than this, but I'm getting sick and tired of having to go through 600 postings (that's how many came in on Monday) of who knows what in binary code or something, that apparently has nothing to do with Atari-related stuff! Replying to the huge list of addresses linked to it hasn't had much effect. What can we do? I personally don't like wasting my time on this junk spam! GO AWAY MEOWERS!

2148. Problems with ICD->AHDI driver (cont.)

Newsgroup: comp.sys.atari.st
Date: 1996-11-06 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3280144ed92a11@sn.no>
Source record: 134518

Me again... ;-)
First of all, thanks to everybody who's replied with suggestions etc.
I just want to give you all a collective thank you since I don't have time
to reply all of you separately.

Anyway, back to my harddisk problems....

(oh, in case someone's missed out on the other threads, here's my setup..)
-Atari STe 4Mbytes RAM, TOS 2.06
-ICD "The Link II" SCSI host adaptor
-ICD "SCSI utilities" software (version 6.5.5 driver)
-CBHD 4.57 harddisk driver software
-Quantum Lightning 540S (SCSI harddisk)
-Hewlett Packard 97548SU (SCSI harddisk)

Someone mentioned that perhaps this short "format" of 3 seconds which I
wrote about is all that it takes with certain drives.
I seem to remember it taking longer before, but perhaps that was just the
"waiting" time while the drive was checked for errors....
And with CBHD it displayed the same partition sizes when I went into the
"partition" menu. There should be nothing on the drive after a format,
right? So CBHD certainly shouldn't know how big my partitions were.

I formatted it anyway using AHDI 5.0 which took a veeeerrrry long time!
Then I tried to partition it using CBHD, but for some reason it wouldn't
let me use the full capacity of the drive. I think it let me have a maximum
of 525 Mbytes totally while my ICD software lets me partition 550.73 Mbytes
which should be more like it since the drive specs for my Quantum Lightning
540S is 550 Mbytes (not 540 like you might have thought).
(and yes- I did set it to "AHDI compatible").

Here's what CBHD told me about the partition sizes after I had partitioned
it with ICD's software (I did ofcourse reboot with CBHD before I ran the
CBHDconf.app):

Partitioned in ICD This is what CBHD displayed

C 10 10
D 230 219
E 60 57
F 70 66
G 180 171

After partitioning it with ICD's software I tried to re-boot the machine
with CBHD on a floppy. After that I tried to install the driver, but it
didn't work.

It seems that you have to change some parameters (if only to press <cancel>) in order to get the driver to be installed on the drive, so I tried to enter the menues in "cbhdconf.app". Sometimes I got to save the driver after entering a few menues, sometimes the mouse pointer just went away and it locked up (not even <CTRL-ALT-RSHIFT-DEL> worked- I had to press the reset button on the back of my STe).
And the drive would never boot by itself.

So once I took another approach: since I got different values in the partition menu in CBHD compared to ICD I came to think that perhaps CBHD partitions the drive differently, so I went to the "allgemein" menu and changed it to these values:

FAT-buffer 16 sectoren
DIR-buffer 16 sectoren
Zusï¿½tliche ordner 16
sectorgrï¿½ï¿½e 512 bytes

...saved it and rebooted, and it worked!!!
I'm not sure if this is correct or safe, so I'm not going to tranfer my other harddisk's contents back again until I'm sure it is.

But I noticed a difference from my Hewlett Packard drive which I formatted/partitioned and installed the driver on using just the CHBD software without any problems:
When booting, this drive blinks it's "in use" LED rapidly (just like with my ICD driver) and then boots with the CBHD driver after a while (about 6 seconds).

But with my Quantum drive: it blinks it's "in use" LED *very* fast, almost like it's glowing, but the CBHD driver message comes up and boots, and it takes the same time, so is something still wrong?

Should I perhaps edit something else (or to a different value) in "cbhdconf.app"? I'm not really sure about the sector size/FAT buffer/DIR buffer or whatever, but I had a look in one of ICD's programs which tells about each partition, and this is what it looks like:

ICD Show Hard Drive Partitions Version 3.09 Copyright ï¿½ 1994 ICD Inc.

2149. 'SAM'- where is it?

Newsgroup: comp.sys.atari.st
Date: 1996-11-06 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32801454d97495@sn.no>
Source record: 134519

I can recall reading a posting here a while ago where someone asked where the sample editor/player (?) "SAM" was located (since it's obviously freeware or something), but I didn't see any replies.

I'd really like to try it out, especially since I have an STe and I read that it only works with STe and Falcon machines.
So, has anyone uploaded it to any site/web-page on the net?

I've had exactly that problem, get the headers, read 1 message but
when I try to read the next I get bombs or a lock-up. Also, in med. res., the
windows are positioned so that it's impossible to resize them, the
button is off the bottom of the screen. This is on a 1 meg, Tos 1.62,
STE with STiK 1.11.

: programming again for my ST, for fun. But what kind of programs
: would you like to see for this computer?
:

I'd like to see someone put together a nice set of tools for
making web-pages.

The main tool I'd like to see is a simple little program that will
load and display jpegs and gifs so you can rubberband various areas
of the image and create image maps...both client side and CIS script
formats.

Something else that would be really neat...
A program that can take Page Stream, Calamus, Post Script, Papyrus, etc...
documents and convert them to HTML. Next it should allow you to pick
text and images with your mouse and imbed your links.

Well, that's depends on what PC OS you're using... on my WinNT, I can format
my diskette, compile a C++ program & have 2 Netscape session (browsing VC++
MFC FAQ & searching for source code) all at the same time.

I cannot do such things when I was using WfW 3.11, on the same hardware.

We started originally in response to the FAST/ELSPA proposals to license BBS's "to prevent the distribution of pirated software" and, later, submitted evidence to the Home Affairs Select Committee enquiry in comms and pornography. We've recently made responses over the ludicrous Guardian "outing" of Demon Internet as a centre of pornography. Often we're very quiet because we simply don't have the resources and backing to be very pro-active but we believe, from feedback, that we can have a significant effect. Members have met several MP's to help straighten their ideas, for example.

I hope no-one's too annoyed by this sub-thread but /unthinking/ external interference is a grave threat to comms all over the world. Find out about groups like CommUnity, the EFF in the States and similar groups in your own countries and *join*.

Try using little net available from:
ftp://ftp.funet.fi/pub/atari/net/lit_net.lzh
This uses midi cables to connect the two computers, and allows each to
access the others drives. Also allows messages to be sent back and forth.

Couldn't agree more. MagiC's fast but (on a Falcon at least) Geneva is
far more stable. Now, if only we could get all the authors supporting
MagiC to do the same with Geneva (Start-Me-Up, Appline, Stewart, Alice
etc) I'd never have to have MagiC crash on me again :-)

HSMOD should load *after* MiNT. I believe the docs says the opposite, but
my experience is that it works best if loaded before. And if you don't
run MultiTOS-MiNT it won't load at all.

>is time to dial, it says
>Coprocessor violation. Please reboot.
>
>Anybody knows why I get this error?

It could also be that you've configured HSMOD wrong. I just use the SCC
driver straight out of the packet on my Falcon, perhaps you should try
the same. I believe the SCC on Falcons, TT's and MSTE's are identical so
this should work. Correct me if I'm wrong.

I always had STiK 1.08 working with Magic4 (with CAB set to 'single tasking')
and it worked fine. I am now using STiK 1.11 and can definately state that it
works fine WITH pre-emptive multitasking under both Magic4 and 5 on a Falcon.

Hope this helps.

Yes, it's named 'josk' and yes, it is indeed in maildir. But it does not work. I think I should play around with different directory-names (E.g. /var/spool/mail, u:/var/spool/mail, u:\var\spool\mail, u:\i\var\spool\mail...) before I give up. News is the most important part anyway, I can use Ant Mail for mail.

: I was looking into getting an Atari Computer again(it's been years), and
: was wondering if anyone could update me on what's happened.

Hey, welcome back!

: Is Atari still around even?

In short, no. They hadn't been making computers for a couple of yeas,
having decided to concentrate on the Jaguar, and having licensed the
Falcon to C-Lab. After the Jaguar didn't do as well as Atari had planned,
the merged with JTS, a manufacturer of disk drives, and the new company
bears the JTS name. No more Atari-made computers or games machines.

: And besides that, if I were to buy an Atari Computer, which would you
: recommend. I am looking for something inexpensive($1500 or less) and
: can easily be upgraded to run faster or better.

You can easily get a nice used TT030 system for that amount. There have
been a couple of people selling such systems posting here recently, and
if I didn't already have one myself, I'd be really tempted.

You should be able to boot bypassing the AUTO folder and ACCS by holding down
Control or Alternate or something when you boot up.

At least, I THINK it bypasses the ACCS...

That's a valid point. It's partly OS dependent, and partly hardware
dependent. This box runs Win95.

The current version of Freedom is v2. I've found it on ftp.uni-kl.de.
I don't know the right path. At the time I downloaded it, it was on
the incoming directory but by now it's probably moved to an other
directory.
The demoversion is due to the built-in restriction not very usable but
one can get a pretty good impression of its capabilities.
The previous version was v1.15

The AHDI is loaded you just need to install the drive letter on to your desktop.

If you're using Tos 2.06, you need to select "Install Devices" from the desktop menu before you see all the harddisk drives. Anything lower than Tos 2.06 (maybe lower than Tos 2.05), you need to "Install" the drive C: on to your desktop.

>
>Martyn
>.

Is this the consensus? -that Geneva is far more stable than Magic? I was planning on purchasing a copy of Magic 5, not only for it's speed, but for its improved printing, disk access, and serial port routines, not to mention that I was getting tired of Geneva crashing on me all the time. I also thought it would be nice to have pre-emptive multitasking; it seems that under Geneva's cooperative multitasking, background operations are very slow. I am not concerned about MiNT because I can't seem to get it to work with Outside virtual memory manager, so that wouldn't be any loss.

Does anyone know if Magic 5 is supposed to be more stable? Geneva doesn't seem all that stable either.

Hi wvw@euronet.nl, on 05 Nov 96 you wrote:

w> I want to connect a ZIP-drive to an Atari ST with a ICD-Link II DMA
w> to SCSI connector.
w> I heard that some modifications must be done on the Link to use the
w> ZIP directly with the ST.

I think the problem is that the Link relies for power on cable 26 of the SCSI bus. This is known as TERMPWR (Termination Power). AFAIK the ZIP does not provide this.

If you have other SCSI devices in the chain which provide TERMPWR to the bus you will be OK otherwise you need to connect a 5v point on the ZIP PCB to pin 26 of its SCSI connector.

Message-ID: <466_RCain@nest.demon.co.uk>
Source record: 134552

Hi hallvart@sn.no, on 05 Nov 96 you wrote:

h> Hmmmm... I'm using IDs 5 and 6. Know of any way to make the boot-
h> time shorter? ICD's driver was a lot quicker to boot- it even had a
h> feature where you could shut off un-needed IDs, so they just got
h> skipped. I didn't see this in "cbhdconf.app".

Well, this facility should be available under "Treiber/Gerate"
(Driver/Devices), Hallvart. It will allow you to specify the
"Geratereihenfolge" (device order) when the boot sequence is searching for
bootable drives. Unfortunately, in v4.56, this is "not yet implemented" :(

You have v4.57, though, (wish I could find it on a BBS), and this seems to
have formatting which was missing from v4.56. Maybe you have
"Treiber/Gerate" there too? Let me know - it will take time off the boot
process which I have to go through twice as I have Magic.

>> I have run the demo version of HDDriver 6.0. This seems to have a
>> similar performance to CBHD.
h>
h> And it's a commercial program.

Mmm .. for people like us with ONLY SCSI devices CBHD seems a far better bet.
The Falconers can't use it, of course, as they have these IDE things attached
:)

BTW, did you realise that, under "Treiber/Laufwerke" - lower section, you can
specify which partitions are to be write protected?

My best guess is that cris.com accepted an unverified rmgroup, probably issued
by Steve Boursy and the Meow Cascade morons; later, when they realized how
stupid they had been, they fixed it.

Another possible explanation is that they had a hardware problem and when it
was fixed, the group came back becasue the spool folder was once more
accessible.

>recommend. I am looking for something inexpensive($1500 or less) and
>can easily be upgraded to run faster or better.

A second-hand TT (hard to find.) or Falcon (easier.) is the obvious
choice, although none of them is really easy to upgrade. Anything less
than a 68030-machine is not worth buying today, unless you get a real
good deal.

>Was looking at the COmputer DirecT40, with the PCI car pentium. That
>would be nice, but...$$$...
>
>Suggestions?

If you're not already a dedicated Atari-user with lots of software you
really can't do without, you'd be better off buying a PC or Mac. I will
probably get a lot of flames for saying this, but investing in a expencive
TOS-compatible computer today is just insane unless you're a total
Atari-addict like me. If my Falcon died beyond repair today, I would start
looking for a second-hand TT or Falcon tomorrow. A normal person would
not do such a thing.

Not successfully, no...

>I guess I would try to do it under MiNT although I've never been able to
>get MiNTNET running because I can't install MinixFS. Thus tar.ttp crashes
>when I try to decompress files which are > 8+3.

It's not the long filenames that confuses tar, it's the symlinks. And
why can't you install MinixFS? It really doesn't matter though, unless
you have at least 4Mb ram and a harddrive for your stf you couldn't
do anything useful with it anyway.

>So what else... What ports should I use?

The serial ports is the obvious choice, but you can also use the midi-
-ports, the cartridge-port or even the printer-port. It all depends on
the software.

>The Mega4/STE has a LAN port. Can I somehow connect this with the com port
>of the STf? I would expect that I would have to connect them via com
>ports or serial ports.

It should be possible with a bit of hacking, but a better solution would
be to get Midi-Com from System Solutions (hhtp://www.ssolutions.co.uk)
which can use almost whatever port you want, including some networking
cartridges for the rom-port. There is a demo of the software somewhere
in cyberspace, I believe I found it on ftp.cnam.fr/pub/Atari/Telecomm

There has not been a further public release of newer versions, one is
expected shortly.

>Using PPP, I get a 'Bad PPP Packet' error as soon as I connect and select
>PPP. This happens before I get the IP address.

PPP does still have a few problems, and I always recommend that people should
use SLIP.

>a lot easier to use with it's menues etc.

I'm totally agree with you on that point. Selectric is easier to
use.

>What features does v2 have compared to 1.5?
>I didn't find any CPX control panel or "launch" feature in 1.15...

One of the main differents with the previous version is that the
latest have a built-in cpx-controller. With this controller you can
e.g. have many cpx modules in their own windows open at the same
time. The cpx-windows can be iconisized. The latest version has
also a configuration cpx. With the previous version you must do the
configuration of Freedom with a texteditor.

Launching a program is quite simple. Just open the Freedom.acc,
select the program you wish to start and do a right double click
(or a CONTROl double (left) click) and ther you go.
That way you can even view text or graphics.
One final note to stop.
It seems that the "launch" feature requires a modern desktop.
AFAIK, this feature won't work from the normal desktop. Desktops
like Gimini 1.999, Neodesk/Geneva, Thing 1.09 have no problems
with it.

CU,
Martin

>Does anyone know if Magic 5 is supposed to be more stable? Geneva
>doesn't seem all that stable either.

I can't compare both operating systems since I never used Geneva. However,
MagiC 5 runs stable on both my computers -- a Falcon and a Macintosh PowerBook.
I guess the stability also depends on the kind of programs you use. Recent
GEM-based programs are far more suitable for MagiC 5 than old programs which
use the hardware directly.

I think you both have made very valid points. If you need a computer that
does a good job with hard disk recording as well as having excellent MIDI
support, than the Falcon/C-Lab computer is the way to go. It can thrive
as a speciality machine for the music niche.

But for some uses(not music definitely), one requires the use of a PC
computer. Since I plan into going in the field of game design, I have to
write programs for PC's which is what nearly all companies are doing.
Plus I would have an extra benefit of not only having a good gaming
platfrom(save myself the cost of a PSX), but also Atari emulation that
uses the extra peripherals on the PC such as CD-ROM and extra memory.

So it all comes down to what the person needs. But either way, the TOS
platform is still being supported whever it's a Falcon compatible or an
emulation program. It no longer requires the fuji on the machine, else ST
computing would have died along with Atari.

And yes, even on a power Pentium running Windoze 95, programs running
under GEM are still more efficent and friendlier than the bloated coding
that's the by-product of Monkey$oft.

I guess this is Gary Kildall's revenge from the grave against Billionare
Bill. :)

If you live in the US, try Toad Computers, they have a kit that will make
it go all the way upto 57600 bps, but will possibly slow up your
computer, just as a warning.

2210. How to hook 520 to monitor?

Newsgroup: comp.sys.atari.st
Date: 1996-11-07 00:00:00 UTC
From: Ted Birdsell <tedbird@ix.netcom.com>
Message-ID: <3281F633.77D4@ix.netcom.com>
Source record: 134427

I've just bought a 520st at a flea market. Now don't flame me, but I own a Commodore 1084s monitor and a couple of Amigas. Can I hook up the 520 to the 1084s and where would I get a cable?

Thanks,

Ted

The same problem with the OKAMI I have had some days ago.
The program is very good and it saves me A LOT of mony, but in manual
there is no some important informations, especilly about folders I should
create during instalation.
To avoid report "Mail.josk - no work", in directory ...\NEWS_O_MAIL\ You
need to create folder \JOSK (or rename folder \ROOT into \JOSK). You need
also to edit PASSWD file, to enter your name and username.

from the +DATE function? Please send it to me if you do!

2213. UVK distribution explained (problems, etc.)

Newsgroup: comp.sys.atari.st
Date: 1996-11-07 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.110796.182839.66@wxs5-9.worldaccess.nl>
Source record: 134430

In 1989 somewhere I sold the rights to UVK distribution outside the Netherlands to Douglas Communications. I could still sell to people who reacted to old press stuff, but he'd do the rest. In the Netherlands, sales were done through ACN (has been so ever since 1988). Douglas Communications have set up sub-deal in Sweden, Germany/France (Compo, which went all wrong) and the USA (Oregon).
In the last three years or so, Douglas Communications have been behind on versions. At first 1 version, then 2 versions...and it didn't get any better. I sent the versions off, but somehow he didn't catch up on sending them, on mailings, etc. When the contract came up for renewal, last November 1st, I didn't renew it. This basically means that all rights for all countries except the Netherlands and Belgium are back with me. I am currently negotiating with Oregon Research so they can continue to distribute in the US (and probably Canada as well). This will most likely start on January 1st, with version 7.0 released later that month.
There have been problems with Douglas Communications and Oregon, somehow their communication seems to have gotten their wires crossed, whatever. Oregon didn't get any of the latest versions, and Bob Luneski of Oregon told me that 6.4 was the last one he got (or 6.6, I don't really recall, but an old one in any case). So Oregon will be sorted out soon; I am waiting for Bob to email me details on our UVK deal.
The rest of the world can get the thing direct through me. If you're interested, just email me. The current version is 6.9, which can handle the Carpe Diem and Pharaoh Viruses and which will also work on Magic.
Douglas Communications will continue to receive UVK as well, even though in theory they no longer have the right to sell it, to supply existing customers. We're still friends (as far as I know).
I hope this explaisn everything that might need to be explained. If you still have questions, or if you'd like to do distribution in your neck of the woods (barring the Netherlands, Belgium, USA and Canada), feel free to contact me.

Thanks for your attention.

I bought the RSVE serial port mod. kit from Toad Computers and had
Ray (from there) install it. I've noticed no slow down at all, and
there is nothing mentioned in the docs (or anyplace else that I
know of) about it slowing the computer down...Where did you hear
this at? :)

Toad can be reached:

Phone 1-800-448-8623
E-Mail info@toad.net

Good luck, and happy high-speed modeming! :)

There are at least two versions. AFAIK they are both PD. TeX (pronounced "tek"- the X is really a Greek chi) allows you to make TeXnical documents with equations. Several technical journals will allow submissions in TeX form. Although you can preview TeX documents, it is not really interactive. Calligrapher Gold lets you do this interactively and make it part of your document.

Hi there!

nobody@nowhere wrote:
:
: Hi Everybody,
: I would like to know how to set the baud rate of my system running
: the latest mintnet to greater than 19200, which is the max the modem cpx goes
: for Modem 2.

Depends on the Atari you are using. If you have a STfm, STe, or similar,
the you are limited to 19200 unless you get the RSVE hardware
modification done. TT, Falcon and Mega STe are fine at higher speeds.
Using the modem CPX is a poor way to set baud rate, as the CPX is not
written with high speed serial ports in mind. A program like CoNnect can
be used to dial at whatever speed and make the initial connection, and
while your ISP is trying to establish SLIP/PPP connection (will retry for
minutes maybe) you can run syslogd and pppd to establish connection.

Hope this helps...

Ummmm....sounds to me like you need a VT100 or ANSI driver installed
somehow....
I haven't installed mint on my system yet...so I can't help much...
Try the ANSI auto folder program found at
ftp://toad.net/umich/Communications/ansist.lzh (or something similar).
It adds ANSI calls to the built in VT52.

Also, you might find a utility that gives you a VT100 window.

Good luck,
Brian

2231. Hardware For-Sale

Newsgroup: comp.sys.atari.st
Date: 1996-11-07 00:00:00 UTC
From: Daniel Fangmann <dfangmann@worldnet.att.net>
Message-ID: <01bbcc6e$f9bcf600$b2de92cf@default>
Source record: 134495

Following Atari hardware for sale:

Atari Tower Power!!

All equipment installed into 'new' tower. All devices are connected to
your Atari Computer through the included 'LINK 2' ICD device. No more
compatibility problems:
Here's whats inside:

85 meg Seagate hard drive/Sony 541-CDU CD drive/ICD 155meg tape backup
drive
540 meg 'brand new' "Fujitsu" hard drive & 2 50 meg Seagate hard drives
+ ICD Link 2 and cable.

Tower was put togeather by Alex at ATY Computers on 9/30/96. All is ready
to go, software and instructions included. This is once sweet setup for an
Atari Computer.
Link 2 connects to back of tower, one cable to your ST/STE/MEGA/TT or
Falcon and your ready to go. All devices are SCSI ,connector on back of
tower is the 50 pin Centronics. I was planning to hook the tower up to my
MEGA STE but have decided to sell due to a change in plan, i.e.,
Pentium/Gemulator taking up my time. Anyway this is a great setup and
would make any Atari user happy with total hard disk space at 725 megs. 5
extra 155 meg backup tapes included.

Asking price for this gem is $800. Tower plus MEGA STE w/50meg internal HD
and 144meg high density floppy drive...$1100.

Also for-sale...

SC1224 monitors: 'Refurbished'...$65ea. 'Used'...$50ea.
1040 STF/1meg/used/mouse, in good shape & clean...$75 ($65 w/o Atari Mouse)
PCM124 Atari PC Monitor: 'Refurbished'-9-pin connector...$70ea.

Buyer pays shipping. Payment by check/money-order or COD.
Please e-mail if interested in anything.
(no, I am not a dealer, just an Atari enthusiast since '85)

/Danny/

2234. Music Player Demo

Newsgroup: comp.sys.atari.st
Date: 1996-11-07 00:00:00 UTC
From: Anonymous <Anonymous@notes.pw.com>
Message-ID: <32819087.4720@notes.pw.com>
Source record: 134498

I used to have a music demo for the ST about 4 years ago, but I have lost it
and am trying to locate another copy.

I can't remember the name of it, but I can remember the following details:

- It ran from floppy
- The screen was arranged like stereo system components
- The bottom component was an oscilloscope
- It included lots of music
- Music was arranged in groups
- I think that there was a disk button to switch between groups of music
- There was a delay to decompress the music when starting up the demo

Any help that could be provided in identifying / locating this demo would be
greatly appreciated.

Thanks
Chris Burgess

TEX is a typesetting system and the version you have is unlikely to be a pirate copy (I think it is GPL so it would be illegal *not* to make it free). Unfortunately it is probably an old version.

The unfortunate people who use TEX normally use LaTeX 2e which although built on top of TeX is easier to use. It is very slow on most computers. The idea is that you type your document in LaTeX, then run it though the LaTeX compiler to produce a .DVI file which you then convert into PostScript using dvips. Finally you use GhostScript to print this out on your printer. Phew!

It takes it's time on my PC - 16MB 120Mhz Pentium. (no flames - it's bad enough having to use intel :-)

> but I thought that the Falcons was fully bi-directional... See ya! :)

That's not quite true. All ST's have bi directional printer ports; because
you can set a bit in the sound chip to control the direction of data on the
printer port bus. I wrote a program a while ago to record sound samples
from a A-D converter attached to the printer port so I know you can do it.
You might be able to write a driver for Syquest and Zip drives - whether
you can do it without the use of extra control lines such as 'paper out' is
still open to debate. Use SCSI, it will be much faster!

Chris.

Source record: 134507

Aloha!
I gave stik a whole bunch of memory (don't remember how
much...would look and see but I'm online from work at the moment)
in the default.cnf. Since then...I rarely get jpeg hang ups. I don't
know if that really fixed it...maybe it just depends on how the wind
is blowing??? Anyway...there is one paramater in the config file
that tells STik how much memory to set aside for itself while loading.
I gave it a nice fat chunck and have had much fewer problems.
If you've the memory to spare...give it a shot...nothing to loose :)

I also use Geneva...perhaps it is my imagination...but it seems to run
much-faster/less-hangups under Geneva than with plain TOS (Falcon TOS
4.something).

Brian

... unless (!), he/she is into hard disk recording :-) Then a C-lab machine
with CAF or Logic Audio is still an extremely flexible and *cheap* solution
... and it does the work well without crashing. A PC still cannot compete in
this area.
Software like SAW for the PC, is not that reliable, requires a *fast* Pentium
and you have to mess around with (interfering) drivers for soundcards,
graphics cards, SCSI cards, MIDI cards etc.
Software for the Mac that gives you 8 channels with DSP effects + MIDI
requires expensive soundcards and of course a Mac with the power required
to record and play 16 tracks simultanesouly with MIDI.
Also, many people claim Ataris have better timing than Macs (personally,
I dont know).

The Falcon was and is designed for music from the beginning. The audio matrix
system is a piece of artwork.

/Mikael, M.Sc.CS and musician
(C-lab Falcon mkII with CAF 2.06, blowUp PSI, SONY DTC-690 etc ...)

2245. Choice between JAZZ,ZIP,MCD,EZ s,...

Newsgroup: comp.sys.atari.st

I'd like to buy a new removable hard disk for my Falcon 30.
But there's really too many units proposed.

I've heard of these units:
JAZZ, PD/CD-ROM, MCD540, PCD-2000, ZIP SCSI, EZ flyer 230, HS650, Syjet.

Could anyone help me to choose a unit, wich wont be abandonned?
(I need a SCSII-internal one)
are they recognised by any of the atari drivers (wich one)?

Thanks!

2246. The Multisync FAQ

Newsgroup: comp.sys.atari.st
Date: 1996-11-07 00:00:00 UTC
From: atari@teleport.com
Message-ID: <55t0om$8qm@nadine.teleport.com>
Source record: 134510

Not properly a FAQ, yet, but it's a useful document:

THIS IS ABOUT CONNECTING A MULTISYNC MONITOR TO THE ST. IT HAS REVIEWS OF
MONITORS, CABLE PINOUTS, A DIGRAM ON HOW TO BUILD AN INTERFACE.
IF ANYONE DOES THIS OR KNOWS ABOUT THESE KIND OF THINGS, PLEASE LET ME
KNOW.

MULTISYNCH MONITORS
COLOR AND HIGH RESOLUTION MONOCHROME
DISPLAY FOR THE ATARI STs

COLOR BETTERS THE ST'S SC1224

Most multisynch monitors, but not all, will work with the
ST's RGB output and vertical refresh rate. Advantages are
operation in high resolution monochrome and both low and medium
color using a single monitor. An additional advantage is the
better color rendition with more differentiation in tonalities.
Subtle shades are better represented than on the ST. With Sony
color monitors, the colors are Kodachrome in quality -- rich
and saturated. On the negative side, none of these color
monitors will match the sharpness of the Atari SM124 monochrome
monitor. This monitor, as with other monochromes, uses single
pells or pixels to represent screen images. Color monitors
must use three (Red, Green, and Blue) to form the same point on
a screen. As a consequence, they cannot give the crispness and
detail.

THE CRITICAL TEST -- MONOCHROME SHARPNESS

If you use monochrome most of the time, as many do with
Spectre Macintosh emulation, the major question is whether or
not a softer and coarser monochrome display on a color monitor
is acceptable for continuous use. It doesn't make sense or
cents to buy one of the lower priced multisynch monitors as an
economy measure just to obviate the need for two monitors where
high resolution monochrome is important. And the purchase of a
higher quality and higher priced monitor in the $600 to $650
range -- such as the Sony 1304 HG or NEC 3D may not make much
economical sense either. However there are those who continue
to have the desire for these types of monitors --
unfortunately, I am one.

MONITOR SWITCH BOX -- ROLL YOUR OWN

The following pages give pinouts and wiring diagrams for
construction of a Monitor Switch Box so that a multisynch can

be used in both color and monochrome with the ST's monitor output. The box is needed to ground the Monochrome Detect line from the ST and force it to boot in high resolution monochrome. It also switches from the ST's RGB color output to Monochrome Intensity output to drive the monitor. The pinouts for all three Sony monitors (1302, 1303, and 1304) are the same. NEC monitors such as the Multisynch and Multisynch II use the same pinouts. Where Sony and earlier NECs use DB-9 inputs, the new NEC 3D uses a DB-15 connector. The NEC pinouts shown are still valid for the 3D. A converter cable -- DB-9 to DB-15 supplied by NEC -- will give the proper interface. This converter is also availabe commercially as a one piece plug unit. Other

monitors, such as the Mitsubishi Diamondscan, use different plugs. The Mitsubishi uses a DB-25 which is the same in pins and shell as an RS-232. The ST's output can be routed to these monitors with the proper pinouts and plug.

The Monitor Switch Box can be wired for any monitor output configuration. If another monitor is used, a simple conversion plug is comercially available to reconfigure outputs if both monitors use DB-9 plugs. If plugs are different for two monitors, then wire a cable with the two different terminations. The least effort and highest cost approach is to buy a cable with one of the plugs already made up. If you are good with a soldering iron, then buy the connectors and makeup your own cables. The ST 13-pin DIN plug is not that easy to work with. The solder or rear side has pins just like the front, and soldering wires to these contacts is not a snap. ST monitor cables, with a DIN 13 male on one end and unterminated on the other, are available from two or three sources. Try Best Electronics or Practical Solutions. A 4-pole, double throw switch (On-On) will be required for the Box. Also fit the Box with an RCA jack if you want sound routed to a stereo or self amplified speaker like those available from Radio Shack. If you have Tweety Board, this will not be needed.

MARKET FAILURE OF SWITCH BOXES

There have been several attempts to market these monitor switch boxes, and all but the most recent have not met with success. The first reason is high price. The first box produced was overpriced in the $200 range. The second reason is differences in pinouts and plug configurations for the variety of monitor inputs. There is no standard. The third reason for lack of success is the small ST market for alternative multisynch monitors.

Making your own box for $35 or less in parts will give you an opportunity to try out several monitors at a dealer and select the one that is most acceptable for high resolution monochrome display. But a problem is that most dealers don't

have the more expensive monitors broken out for display, and you may not be able to give one a try. Be persistant. Ask the dealer if he can recommend a customer that has a monitor you are interested in. But by all means, try before you buy to insure that the display meets with your satisfaction. Don't take the word of others because each has different levels of acceptability.

MULTISYNCH MONITOR PERFORMANCE

I have tried the homebrew Monitor Switch Box with the Sony 1303 and the NEC Multisync and Multisync II. The 1303 is not the quality of the 1302 which has a finer dot pitch. However, the color was excellent but the monochrome display was soft. The Sony 1302 has a .26mm dot pitch. This is a measure of the

center-to-center distance between dots and is also an indicator of dot or pixel size. Until recently, the 1302 had the finest dot pitch of any color monitor on the market. And dot pitch is a better indicator of sharpeness than horizontal and vertical lines of resolution. The lines are also a function of screen display size; so don't be mislead by more lines resolution. It simply might correspond to a larger monitor display size. And as the monitor size
increases, the dots are made larger and render a less sharp display.

But Sony is less than forthcoming in its specifications for the 1302. While touting the .26mm dot pitch, they don't publish the fact that this applies to horizontal spacing only. The vertical spacing is different, perhaps .32mm which is nothing to shout about. As a consequence, you may see black horizontal lines that separate the color display lines. They are not dramatically obtrusive, but they are there. On the plus side, the Sony's have that superb Kodachrome color that is richly saturated. The blacks are black, and the background in monochrome is absolutely paper white. The 1302 is satisfactory for ST monochrome use.

This model is being superseded by the new 1304 HG that has a .25mm dot pitch. The specifications on this new monitor closely match those of the Apple Color Monitor for the Mac II. This monitor is made by Sony to Apple's specifications, but it is not multisynch. I use one on a Mac II and it is excellent in both monochrome and color. Because of the closeness in specifications -- the only two monitors available with a .25mm dot pitch -- I strongly suspicion that they are the same. Sony has simply adapted the Apple version for multisynch use. And if I were to place my money on a monitor that would be highly acceptable for monochrome display with the ST (sight unseen in an actual test), it would be the Sony 1304 HG. When viewed in color on an IBM PC, the dots appeared extremely fine and it

appears that the .25 pitch holds true for both vertical and horizontal.

The 1303 is not as good as the 1302 or 1304. However it did give a good monochrome display that was similar in size to the ST's color display in medium resolution. Although good, it does not come close to matching quality of the SM124. Since I spend at least 60 percent or more of my time in Spectre/Macintosh operation, I felt that this was not acceptable for my requirements. When switching from color to monochrome, the screen picture sizes must be readjusted. When the color picture fills out the screen, the monochrome picture will be half screen size until it is adjusted. The Sony controls are in the rear, making them very inconvenient for this operation. The NEC and NEC II have their controls on the front. When making adjustments, insure that horizontal positioning is correct. When first tested, the NEC seemed to have ghosting with the character display. However this was because the screen had wrapped around and required proper positioning. The NEC display was also good. But it was not

the equal of Sony in color -- more pastel and less saturated.

Both the Sony 1304 and NEC 3D now have automatic screen sizing when displays are changed; so this should eliminate annoying adjustments. Additionally, both are improved over earlier models. Both would perhaps make acceptable choices for monochrome use on the ST. But I would still think that the Sony 1304 would win by more than a hair if it is anything like the Apple Macintosh monitor. Perhaps a dealer will break one out for testing when they become more plentiful and prices drop.

Sony 1304s are discounted for around $645, and 1302s for $575. NEC 3Ds are lower priced at $585. The Mitsubishi Diamond scan can be found at $499 and sometimes lower. If the 16" Nano FlexScan is a true multisynch, those who want everything can get it for just under $900.

The following should get you started on a switch box so that you can perform your own acceptance testing. I have not tried a Princeton Graphics or Mitsubishi Diamondscan since I felt that their displays with the IBM PC were not the match of the Sony or NEC. It wasn't worth the money or effort for such a change, and a promise was made a long time ago not to compromise and throw money at something you wouldn't be satisfied with. Climbing out of that hole is too costly, and I have paid this price in both camera and stereo equipment -- but never again.

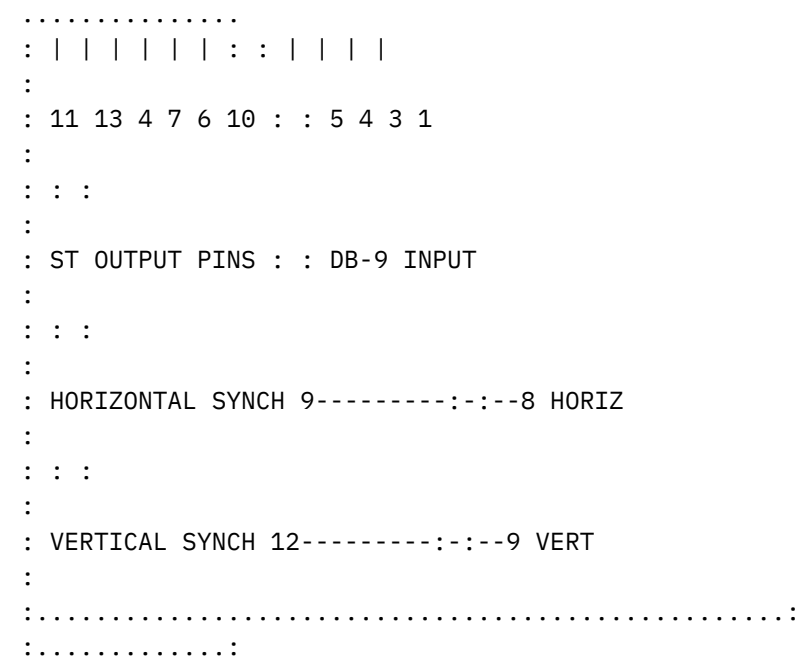
This plug is available in most electronic supply stores. One end is DB-9 Female for connecting to the box's output cable, and the other end is DB-9 Male that plugs into the Monitor or the DB-9 to DB-15 cable for the NEC 3D. The converter has a small printed circuit board with jumper wires to make the proper input/output configuration. The pinouts shown above are for a switch box wired for Sony output and their conversion to output configuration for a NEC monitor.

MULTISYNCH SWITCH WIRING ST DIN 13 OUT TO SONY DB-9
4-POLE DOUBLE THROW ON-ON



Center poles of switch (labeled as RED, GREEN, and BLUE OUT)
are common output to the Sony monitor through the DB-9
connector. When switch is thrown to COLOR side (lower contacts),
the ST's RGB output is fed to the common output center poles.
Monochrome Detect has no output in COLOR. With the switch thrown
to MONOCHROME (upper contacts), Monochrome Detect is grounded and
Monochrome Intensity is fed to the three RGB outputs. Horizontal
and Vertical Synchs are fed straight through from the ST to DB-9
connector. Thanks to Mike Odegard for the original circuit in
file #5617 uploaded in January 1988. It works much better than
my circuit that didn't use resistance.

2247. Music Player Demo

Newsgroup: comp.sys.atari.st
Date: 1996-11-07 00:00:00 UTC
From: Chris Burgess <Chris_Burgess@notes.pw.com>
Message-ID: <32819AC5.748F@notes.pw.com>
Source record: 134511

I used to have a music demo for the ST about 4 years ago, but I have lost it and am trying to locate another copy.

I can't remember the name of it, but I can remember the following details:

- It ran from floppy
- The screen was arranged like stereo system components
- The bottom component was an oscilloscope
- It included lots of music
- Music was arranged in groups
- I think that there was a disk button to switch between groups of music
- There was a delay to decompress the music when starting up the demo

Any help that could be provided in identifying / locating this demo would be greatly appreciated.

Thanks
Chris Burgess

>The previous version was v1.15

I downloaded v1.15 and tried it out, but I wasn't too impressed.
Perhaps I just haven't found all of it's features yet, but Selectric seems
a lot easier to use with it's menues etc.
What features does v2 have compared to 1.5?
I didn't find any CPX control panel or "launch" feature in 1.15...

During some upgrades and bugfixes on Majordomo, it ate the CAB mailing list, and a couple backup copies to boot. The best we were able to do was to take the next most recent listfile (January 13, for god's sake) and add people in from the transfer logs (which went way back, but weren't entirely complete, and didn't record unsubscriptions).

If you were on the list, subscribe again. If you're on it, and don't want to be, unsubscribe. I'm still weeding nonexistant addresses.

2251. About the Amiga monitors. (compatible with Atari) 1/3 14"

Newsgroup: comp.sys.atari.st
Date: 1996-11-07 00:00:00 UTC
From: Katherine L Ellis <kellis@primenet.com>
Message-ID: <Pine.BSI.3.95.961107164231.25939A-100000@usr05.primenet.com>
Source record: 134515

Amiga M1438S Multiscan Monitor
The AMIGA M1438S is a very versatile 14" monitor.
It suits a whole range of possible applications be they
of a commercial or a private character. The monitor was
developed in accordance with current European standards
and is manufactured in a quality certified to meet DIN ISO 9001 regulations.
AMIGA M1438S is equipped with highly efficient electronic
components such as a high-resolution tube for crystal-clear pictures.
The monitor has many ergonomic characteristics:
low power consumption, non-glare screen,
high repetition frequency. Swivel base and low radiation
in accordance with MPR II.
Real autoscanning (automatic selection of the correct input frequency)
makes the monitor compatible to all standard video sources.

The AMIGA M1438S is already equipped with an AMIGA compatible
connecting cable. It can represent all video modes of A1200
and A4000T. Two stereo speakers with amplifier are installed for sound output.

Highlights:
high resolution
high-quality picture
real autoscanning
analog inputs
comapatible with Amiga 1200 and 4000T
versatile applications in office and industry environments and for games
stereo speakers and amp built in

Screen:
14" (355.6mm) diagonal antiglare
0.28mm dot pitch
Short persistance (P22) phosphor tube
57% light transmission
Saddle/saddle deflection coil

Maximum Resolution:
Horizontal 800 dots non-int., 1024 interlaced
Vertical 600 lines non-int., 768 interlaced

Bandwidth:
Video bandwidth 40 MHz
Frequencies:
Horizontal 15-40 KHz
Vertical 45-90 Hz

User Controls:
Mains on/off
Contrast
Brightness
Vertical height
Horizontal position
Volume

Inputs:
Analog RGB via 15-pin 'D'
Stereo cinch audio inputs

Audio:
Direct connection to Amiga audio output
Stereo amplifier
Two loud speakers built in

You first need to see what size sockets are installed in your STe. If they aren't long enough (I believe TOS 2.06 has 4 more pins than 1.62), you'll have to install new ones. Additionally, there are a couple of jumpers/solder pads that need to be changed, and I'm not privy to the detials on that score, sorry.

>first time I tried it!

Fixed it! It turns out that the uucpbe-variable needs to be set to 1
even though I'm SOUP, not UUCP. This is what the docs says:

```
# UUCP backend type
#
# STATUS: required
# UUCP: yes
# SOUP: no
# MAUS: no
#
# Specifies the uucp backend software you are using.
# Possible values are:
# 0 Hermes <1.10 (default)
# 1 Hermes >=1.10
# If you are not using uucp at all, set to 0.
#
uucpbe=1
```

This is apparently not quite correct, uucpbe should always be set to 1
unless you're using Hermes < 1.10.

Thanks to everybody who has helped me with this.

Well, it looks a bit dated, so 3D-support would be nice. I've modified
the RSC myself to give it 3D-look, but it's not perfect. And non-modal
dialogs would also be nice.

>join the newsgroup maus.sys.atari.okami if you want to discuss things.

My news-server doesn't carry these groups. I've asked the sysop a couple
of times, but haven't even got an answer :-(

I've heard a few people "complain" about Freedom's ease of use, which is why, in a previous post, I said you had to give it time, and set it up how you like it. At first I found it awkward, but after a little time spent with a text editor and the config file, it is now beautifully integrated into my system, and has been the envy of quite a few Win '95 owning friends.

If you aren't using a multitasking system, I can appreciate that Freedom is a little bit of overkill - I don't use it myself under single TOS. Under MTOS or MagiC, etc. though I wouldn't change for the world!

Cheers,

Xav

Can anyone advise whether it is possible to use a ZIP drive when using AHDI as a disk driver?

I'm asking as so far people have told me I need to use HD-Driver, but even with version 6 I of HDDI still get the SCSI timeout problems, which AHDI does not sufer from.

A couple months ago our previous posting service was abused by some forgers
and we took it offline. There was a discussion about one particular
incident on this newsgroup. (You can do a search on Deja News for the
subject line "DejaNews Usenet Posting Abuse/Forgeries" in this newsgroup).
This article is just a followup to that previous discussion, because some
people were interested in what our future plans were.

Anyway, we've been in "beta" for the last couple weeks with our "New
Improved" posting service, and we just released the final version today (it
has some improvements over what has been running the past 2 weeks).

Some of the new features are that the "From:" header is now authenticated
by email. This authentication method gives us a reasonable assurance that
the person in the From: address is the *real* author of the article. As a
convenience, people with cookieable browsers need only be authenticated
once if they choose. Also, a user is now capable of cancelling their *own*
posts made via Deja News. (They are, of course, not able to cancel any
other posts). So it might be reasonable to contact an "abuser" and ask
them to cancel their post(s).

We now put X-Authenticated-Sender: in the headers just to remind people
that Deja News articles are now authenticated, but this is really just the
same thing as the From: address. We prefer that initial complaints go
directly to the sender. If users repeatedly cause problems, feel free to
contact us.

We have an easy method for blocking abusers, we just add their email
address to an "access denied" list until they shape up.

Of course, we have to define what we call "abuse". Our current policy is
to deny access only if the user spams (BI >= 20), if they post MMF schemes
```

or do something illegal (copyright violation, perhaps, but I don't think we've ever had one of those). We do not deny access because people are buttheads or post off-topic. Please do feel free to flame them in the true Usenet tradition, or better yet, point them to news.announce.newusers & news.newusers.questions.

Our software attempts to detect spam even before it is sent (we check for duplicates, not content). We hope that this will reduce problems.

We also have a fairly strict posting policy. It's printed right on our posting page:
http://postnews.dejanews.com/post.xp

If you do have reason to complain about a Deja News posting, please do not complain to the admins at realtime.net. We only use their news server to post, and they don't like getting our complaints.

Here are some handy email addresses:

abuse@dejanews.com where to complain to
postmaster@dejanews.com system administration stuff
comment@dejanews.com comments/suggestions/kudos/rants
bugs@dejanews.com something doesn't work right
help@dejanews.com if you can't figure something out

Cheers,
Doug Bagley

Count me in. I'd love to be able to play TCE on my Falcon. I bought it ages
ago when I had a Mega STE and it never worked on that either. So I bought it
and have NEVER played it :(
If you could fix it for the Falcon it would be much appreciated :)

I'm not so sure about this, I have set the speed to 134 (aka. 57600)
in .ppprc and that works fine. Unless pppd overrides this and sets
the speed to 38400 that is...

Yes, I've seen the Amiga-badged Microvitek-monitors for ~$400 ->
It's not that cheap, but multisyncs never are. I actually switch between
my cheap-cheap SVGA and an old SC1224 (Or a C= 1084S wich I use at home.).

I'm trying to network a MSTE and a Falcon using MiNTnet. It sort of work,
but the MSTE runs out of memory very quickly so I can't do anything
useful with it.

Ditch the Megafile, it's a slow, noise and small drive anyway. Get a
Link96 and a SCSI-drive, and use the Megafile-cabinet. This would be
the overall best solution, and a quite cheap one too.

I've even used LaTeX on a STE, and the speed was decent. The MSTE ran
LaTeX at an acceptable speed, and on my Falcon is actually quite fast!

>idea is that you type your document in LaTeX, then run it though the LaTeX
>compiler to produce a .DVI file which you then convert into PostScript using
>dvips. Finally you use GhostScript to print this out on your printer. Phew!

That's the hard way. The easy way is to use a Gem-shell. You type your
text in an editor, quit's the editor (Unless you're multitasking ofcourse.)
and press the "T"-key. The source gets compiled, and the finished document
is displayed on the screen. If you want a papercopy you just choose "Print"
from the File-menu, and if you want to edit more you press the "E"-key.
It's really that easy. The hard part is the LaTeX-syntax itself, but once
you've learned it you will appreciate this powerful typesetting language.
For technical documents nothing else comes close.

No dvi-ps-dotmatrix conversion is necessary, there are drivers that output
the dvi-files directly to about any printer.

>It takes it's time on my PC - 16MB 120Mhz Pentium. (no flames - it's bad
>enough having to use intel :-)

Ahh, so you're not using an Atari for this. No wonder it's slow and
clumsy... ;-)

> a lot easier to use with it's menues etc.

Yeah, selecteric is the best! The only thing that isn't that great is that
it doesn't support lonf filenames, or does it?? Atleast the version I have
doesn't.
Freedom have some nice features that Selectric hasn't but I like the inteface
of Selectric much better. Freedom uses it's own ideas.

> What features does v2 have compared to 1.5?

Well, it works like controlpanel now, like Xcontrol or Z-Control and it's a
very good control panel as well. Looks much nicer too. It does also support
ECPX's which are very nice indeed.

> I didn't find any CPX control panel or "launch" feature in 1.15...

That's because you need F2 to get that.

2273. Advice reqd : Best Zip deal

Newsgroup: comp.sys.atari.st
Date: 1996-11-08 00:00:00 UTC
From: Graham Laws <lawsg@it.postoffice.co.uk>
Message-ID: <32834B4E.6838@it.postoffice.co.uk>
Source record: 134373

Fellow Atarians,
I have a 1040STFM upgraded to 4 megs. I run
Emagic's marvellous Notator SL + Unitor + ExPort to
control my various rackmounted sound modules.
It's time I got some more disk storage; just using
the internal floppy is getting tedious. I've been
following the recent discussion taking place on
this newsgroup concerning hard disk installation,
and I've decided to buy a Zip drive and SCSI
adaptor.
I'd appreciate some advice on where to go in the UK
for the best deal (in terms of ï¿½s and service).
Many thanks in advance.
Graham Laws

Hmm...on my Falcon, using ICD's hard driver utils, I just hold down
[control] to get to a desktop with nothing but the A, B, and C drive
icon showing...then I can pick "Install Devices" from the drop-down
menu to access the rest of my hard drive...and thus bypassing all
ACC's, CPX's, and Auto folder programs...Good luck! :)

: >gotchas?
: >
: >
: >--
: >Damir Smitlener

Damir,
The only real "gotcha" to look out for isn't all that bad.
If you get a used Falcon...try to get one that already has had
all the hardware patches. These patches are usually refered to as
follows:

SCSI patch: This is a minor jumper type patch that gets rid of some
SCSI problems when D2D recording. Symptom of an unpatched
Falcon is that it sometimes makes a crushing sound when
recording. Sometimes it will lock up the machine.
It's not a difficult patch to do yourself...so if
the Falcon you buy needs this...get the person selling
it to you to knock 10 or 15 bucks off the price.

Low Frequencey Patch: The stock Atari Falcon 030 adds a small boost
to the lower frequencies. Nice for voice work...but
not so welcome with music. This patch consists of
the exchange of a few resistors. Once again, something
you can do yourself...or quite cheaply at most electronic
shops.

Line Level Patch: The Stock Atari Falcon 030's input is designed to
accept mic level input. If you wish to hook line
level devices (such as pre-amplifed mixer) to the Falcon,
there are two ways to do it. You can either build a set
of cables with some resistors soldered in. Or, you can do
an actual hardware patch inside the Falcon that consists
of changing some resistors.

Most Falcons have already had the SCSI patch done. That's the major
one. If you get a Clab MK Falcon...all of the patches will have
been done.

Other than these minor fixes...I've had great success with my Falcon 030
running CuBase Audio. I'm using a Stock Falcon 030 (with above patches)
with the Atari 14meg Atari memory board, and a 15" SVGA monitor.
```

If you don't already have a monitor...you have several choices...
If you're on a budget...and intened on using the Falcon mostly for running music software...you can get a Monochrome monitor. I recommend, if you can afford it...getting yourself a VGA monitor...the bigger the better as the extra space comes in handy when working with a lot of editor windows and such. Another good reason for VGA is that it's compatible across practicly every computing platform, and the standard will be around for quite a while.

You'll need a good SCSI drive to record on. I personaly use an EZ 135 removeable with good results so far. The SCSI drive (if it's a fixed 3.5" or 2.5") can be internal or external. I personaly recommend getting an external mounted SCSI drive, thus leaving space within the Falcon for a less expensive IDE device for data storage. Of course your needs might prove more efficency in getting a nice large SCSI drive and mounting it right in the Falcon.

Software...I recommend CuBase Audio. Logic Audio is very nice...but they no longer support the Atari versions. This is what I was told after emailing Emagic USA. They wouldn't even sell a copy of Logic Audio Falcon to me! CuBase is top notch...in both midi and digital domains. Steinburg appears to intend on supporting the Falcon as long as they are being produced (and possibly even longer). FYI...the Falcon is still produced...but not by Atari. Clabs now makes the Falcon MK series.

Brian

>and software if you're not dedicated.

I agree that support and software are not as good as they could be, but
even though I'm a dedicated Atari user, I've not been able to run out of
software to try...Since I run an Atari-based BBS, support for users in
my area is not a problem. (but I can see your point, that if I wasn't
here it would be harder for them) By GEM/TOS's very nature though, they
are idea for beginning/casual users... :)

>> I do not believe its insane to invest in a TOS compatible computer...
>> I recommend TOS systems for my whole family and friends! Just got 2
>> more people where I work to buy Jags for $59.00...(beat that Nimbimbo!)
>

>machine, but there's not many games available for it.

Didn't know the PSX and 10 games were available for under $150.00...Oh
well, live and learn... Perhaps its because my Jaguar is used for me,
and my 5 year old (who plays it much more than I do)...so I have about
10 games...which means 40+ more are available not counting CD stuff...

Here is an update with some more e-mail addresses if you care:

http://www.cnet.com CNET Central

richard@cnet.com Richard Hart
gina@cnet.com Gina St. John
crisis@cnet.com Desmond Crisis
dvorak@cnet.com John C. Dvorak
hari@cnet.com Hari Sreenivasan

letters@newsweek.com Newsweek Magazine

http://www.webcrawler.com to find more e-mail addresses and web sites.

I hope that with some luck Atari will get the exposure it deserves.

I know that many of you think that this effort is "preaching to the choir", but you must remember that many people out there who actually remember the days of "Pong" or the "Atari 2600". Just because they think that Atari went out of business years ago, doesn't mean that they wouldn't sit up if they heard a story about Atari. Now I am not suggesting that it will bring Atari back to life or something, but wouldn't it be nice to know that the company we "love to hate" got at least SOME respect?

Thanks!

Dom

Message-ID: <01bbcda3$f8e65ab0$d300010a@dana>
Source record: 134386

My sister still has the 4-meg MegaSTe (with an internal 48 MB Seagate HD) that she bought from me about four years ago for $800 (a good price at that time).

Now I don't know what the hell it's worth, but she doesn't use it anymore and she wants to get rid of it for hopefully not much less that what it's worth, but barring that, whatever she can get...

Anyone who knows what it might be worth now (even if you don't want to buy it yourself) please let me know. Please reply via email as I can't always keep up with the news...

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

In the past I have succeeded in compiling and installing STonX 0.6.5
for Solaris 2.5!

Now, I tried compiling stonx-0.6.5 under SunOS 4.1.4 using gcc
2.6.3 on a SPARC that I have at home.

When I ran configure I was happy to find that my OS was the
same as Marinos Yannikos'. Unfortunately, when I compiled it died on
audio.c. I reran the compiler on this step in verbose mode and the
output follows. Have you folks any ideas?

```
gcc -v -fomit-frame-pointer -I/usr/local/lib/gcc-include -I/usr/openwin/share/include
-DUSE_ON_EXIT=1 -DSTATFS_USE_VFS -DINLINE=inline -O3 -c audio.c -o audio.o

2290. Small Atari auction

Newsgroup: comp.sys.atari.st
Date: 1996-11-08 00:00:00 UTC
From: smedley@gte.net
Message-ID: <56025t$i9h@news3.gte.net>
Source record: 134390
Cross-posted to: comp.sys.atari.st,rec.games.video.atari

Well, I am a pack rat - especially when it comes to video game stuff
and computer equipment. So every now and then I take a good hard look
at my collection and get rid of what I don't need. Usually it will be
a piece of hardware I no longer use. Or my wife just wants it out.
Well, for what ever reason, here are a few items I have for sale.

Auction rules -

Bids will be accepted until Saturday, November 16th. At that point the
auction will go to a "going once, going twice" format, with updates
sent by e-mail to all participants. The auction will end NO LATER THAN
Thursday, November 21st (Turkey Day). If there are still competing
bids for an item when I check my e-mail that morning, the highest
bidder in my mail box gets it. Bid increments are a $1 minimum.

Shipping to be paid by buyer. All items shipped COD.

-=-

Item #1 - Atari TT030 workstation

4 megs ST RAM
TOS 3.06 ROMs (USA)
720K floppy drive
120 meg hard drive
Long-range printer port modification
Revision H motherboard (will accept CaTTamaran 48Mhz upgrade)
Includes AtariWorks, Civilization, and a few misc. games

This system was formerly used to control an automatic embroidery
machine, which is why the transmission distance on the printer port
was boosted (sorry, but I don't know what the actual range is). The
floppy drive is actually a 1.44 meg mechanism, the system lacks the
Ajax driver chip required to do 1.44 meg read/write operations. (BTW -
Toad sells these chips for $40.) Keyboard & mouse included. Has been
packed away in my closet for some time, so clock battery is probably
dead.

Current bid: $200 by ghaddrel

-=-

Item #2 - AlberTT VME graphics card (x2)

1024x768 w/ 16 colors (compare to TT medium res of 640x480)
VGA output (48 Khz horizontal scan rate @ 1024x768)

This card requires a minimum of 4 megs ST RAM to operate. I have two
of these, so the second highest bidder gets the other one. They should
be compatible with just about any GEM program that recognizes the TT
video modes. (I gotta admit, I have not tried them with anything - my
monitor went on the fritz right after I got the cards so I haven't
hooked them up. They do work, though - saw them tested before I paid
for them.) I have no idea if it will work on a Mega STe.

Bidding starts at $30

-=-

Item #3 - Hand scanner w/ Touch Up software

400 dpi scan resolution
Cartridge port interface - no SCSI hardware required!
Includes Touch Up edting software

Everything works great in this package, and the scanning/editing
software, Touch Up, is a fantastic package. Will work with any ST,
STe, TT, or Falcon. In their most recent catalog (95-96) Toad sells a
similair scanner for $109, plus another $39.95 for the software.

Bidding starts at $25

> Does anyone have a fuller listing of AES call numbers and their
> meanings?

A list of AES calls for these tasks would not help because:

a) If you're using the built-in desktop, it doesn't use normal methods
for making AES calls, and there is no way to intercept what it does do in
later versions of TOS.

b) Even if you are using a replacement desktop, there's no way for GBell
to tell the difference between any one dialog and another. There are AES
calls for displaying dialogs, but there is no call which says "display a
confirm copying dialog" specifically.

There are also several Atari-clones avaiable, currently the MedusaT40/T60
and Hades. Both machines can be buy with either a 68040 CPU (66 Mhz) or a
68060 CPU (60 Mhz). There are many times faster than the fastest original
Atari-computer, Hades and Medusa are produced by a swiss company called
Medusa Computer Systems.
There is also a new clone under development, it's called Phenix, from
a french company called CenTEK.

> : And besides that, if I were to buy an Atari Computer, which would you

>
> You can easily get a nice used TT030 system for that amount. There have
> been a couple of people selling such systems posting here recently, and
> if I didn't already have one myself, I'd be really tempted.

There's also a lot of second hand Falcon030's, I have a Falcon myself
and I think it's the coolest Atari-model ever made. It can be accelerated
quite easily, several cards are avaiable ranging in price from 100$ to
1000$. The 1000$ (approx.) one is called AfterBurner040 and is the
high-end Falcon accelerator, it's a card with a 68040 CPU or 68lc040 CPU.
I gives the Falcon a performance boost of 6-10 times a normal Falcon and
has room for 64 MB FastRAM. A normal Falcon is already about 4 times faster
than the ST.

I myself have a cheaper accelerator, that just tunes up the current CPU and
other processors. It's called BlopUP FX-card, and costs about 350$, it

can run the 68030 CPU at 40 Mhz instead of the normal 16 Mhz and it supports a more flexible RAM upgrade which is also a bit faster.

What I also like about the Falcon. is that is has a lot better graphics than the TT and also a lot better sound system. The backdraw is that a stock Falcon is about half the CPU speed of a TT, but as mentioned before than can be fixed with an accelerator.

Keep Cool and Flying...

>of Selectric much better. Freedom uses it's own ideas.

I tried Freedom under Gemulator96/Win95/MagiC4.1 and I couldnt see a
bloody thing, the window was there but everything else looked like
black text on black paper,
However I was desperate for a file selector to handle long file names
and SELECTRIC 1.10 does the job perfectly under the above set up, so
yes it does handle them and yes I agree its the best :)

Cheers.............!ynoT

This has always worked for me but note that it is for american systems
where PRINT DATE$ results in something like 08.11.1996. Also note that
some earlier versions of GFA will give you a different format for DATE$
when compiled.

Yes, if you have a recent version of Geneva. Version 4 works (a bit...)
with MiNT, version 5 (Which should be out very soon.) is supposed to
work better.

>Also, I have been having trouble getting Mint to work with Outside virtual

If you a TT you can use FreeMiNT 1.14 (ftp.fu-berlin.de) which has built-in
virtual memory. Perhaps it works on PAK'ed ST's too, but I don't think
it works with Falcons.

Source record: 134405

Yes you can, if you have the chip sockets that is long enough for the TOS 2.06 chips, I believe that they are 32 pin chips! All you have to do is carefully remove the old 1.6 or 1.62 chips and plug in the new ones, then you have to move one or 2 jumper wires on the board from the holes to the left of the middle hole and bend them over and resolder them in the hole to the right of the middle hole! Some one else is going to have to let you know which jumpers to switch though, as it has been a while since I did this, then I had to switch them back to install the Analogic TOS switcher board!

Found out since then that only sysadministrators stupid enough to act on a rmgroup without a pgp authentication from tale gave us trouble! Needless to say mine was one of several that automatically acted on the forged rmgroup!! Oh, and when I did get it back I had to resubscibe and delete a couple of hundred meow spams! Have since put them in the kill file, I guess I'm not all that bright either!

> Does anyone have a simple GFA procedure to get the day of the week
>from the +DATE function? Please send it to me if you do!

I have it in HiSoft BASIC Pro - want to try that? I'm sure some translation
will be required, but it's not real difficult - just figure the starting date,
do a MOD 7 on it, and a SELECT CASE on the result. Here's a quick & dirty off
the top of me head:

```
' Assumes that the base date is a Sunday - adjust as needed

dt&=val(date$) ' actually, there's some other function to get a numeric
' date, I think, but this is just illustrative

dayofweek% = dt& MOD 7

SELECT CASE dayofweek%

CASE = 0
dayofweek$="SUN"
CASE = 1
dayofweek$="MON"
CASE = 2
dayofweek$="TUE"
CASE = 3
dayofweek$="WED"
CASE = 4
dayofweek$="THU"
CASE = 5
dayofweek$="FRI"
CASE = 6
dayofweek$="SAT"

END SELECT
```

This will give consistent results, so if they're consistently wrong <G>,
adjust the starting day accordingly.

I suppose that some genius somewhere could recompile it to run under Mint,
but normally PINE is the pre-installed mail reader that comes with your
UNIX account on your ISP's computer system! The later versions also let
you read and post to usenet newsgroups. Very easy to use, menu of commands
at the bottom of the screen!

Here's the "meow bomb" FAQ:

FROM: trebor@sirius.com
SUBJECT: INSTA-FAQ: For you to answer hate mail you might get about the binary flood
DATE: Sat, 02 Nov 1996 21:58:05 -0800 ORGANIZATION: Sirius Connections
MESSAGE-ID: <328833b1.6056085@news.sirius.com> NEWSGROUPS: news.admin.net-abuse.misc

Here's an short FAQ I've created, while trying to keep my mailbox from being destroyed by auto-responder acknowledgements.

INSTA-FAQ: What's with all this shit in my favorite newsgroup?
==========
I've created this INSTA-FAQ [tm, I guess] for those who have not yet learned to read Usenet headers, and who wonder WTF is up with this flooding. Please read it before taking any action about the flood.

What's going on?
==========
Easy! A gang of dysfunctional adolescents finds it hysterically funny to post a large file to a whole bunch of groups, putting the email address of a whole bunch of people in the Reply-To: line of the post. They hope to generate a lot of hate mail to those people.

They also include as many test newsgroups as they can in the flood. Since every post to a test newsgroup generates about a dozen acknowledgements from auto-responders around the world, they hope that this will create a mailbomb for the people in the Reply-To: line.

5,000 posts X 10 test newsgroups X 10 auto-responders = 500,000 responses!

Fortunately, and because they've tried this before, most people are prepared for this, and the mailbombs just don't materialize. Most people realize what's going on, and don't send hate mail to the innocent victims, either.

Who are these Idiots[tm]?
==========
In real life? I dunno... On the Net, they are just a bunch of little boys who

haven't grown up, and who go around calling themselves 'The Meowers.'

If they don't engage in real vandalism, like spraying graffiti, or ganging up on elderly people sunning themselves in the park, it's because they're not brave enough.

They have all the guts of someone tossing eggs from a moving car.

What should we do?
==========
Right now? Nothing. Grin and bear it. Hey, at least you're not one of the people being mailbombed!

DO NOT SEND EMAIL TO THE PEOPLE IN THE REPLY-TO LINE!!!!

It's not them towards whom your anger should be directed.

If you want to do something, learn about Usenet and reading headers.

If you want to do something, oppose the Meowers and what they do. They have destroyed many, many newsgroups, and who knows when it will be your turn, or your favorite newsgroup's turn, to be harassed by them.

Boris D. Cahan (bdc2@bdc2-ra.cwru.edu) (bdc2@po.cwru.edu) wrote:

>The docs don't say HOW it is done. Can it and how???

Press Control-P (as one expects in a GEM program). If you press Control-A a configuration dialog will appear where you can set several options, including the GDOS driver number to which output will be sent.

If you want to print text with 1stGuide and NVDI 4 there's a tiny problem: NVDI 4's printer drivers seem to lack the v_alpha_text() function. So if there's need to print text you'll have to install an additional older GDOS driver and configure 1stGuide to print on it.

2314. MagiC 5, threads and NVDI 5

Newsgroup: comp.sys.atari.st
Date: 1996-11-08 00:00:00 UTC
From: Andre_Leistner@b.maus.de
Message-ID: <199611082232.a457@b.maus.de>
Source record: 134414

Magnus Kollberg (emwoll@emw.ericsson.se) wrote:

>Do you need NVDI 5 to be able to get the threads to work??

No, you don't. MagiC 5 supports threads and AFAIK MagiCDesk's copy program (MGCopy) already makes use of them.

I guess the reason why NVDI5 is involved here is the follwing thought:

Modern GEM programs do not come with their own printer drivers but they rely on GDOS to do this work. Until now, GDOS printing blocks any screen output, so you can't use other applications during this time.

In a multithreaded environment a GEM program could create a thread dedicated to printing in the background. This thread would open the GDOS printer driver and then print your document. However, since NVDI 4 doesn't support threads it cannot handle two (or more) tasks simultaneously (i.e. printing while drawing on the screen). So even if a program created a thread for GDOS printing this would still stop other applications from making screen output.

That's why a new, multithreading-aware version of NVDI is needed. It could create a thread for print jobs and would still be able to draw lines, circles, dots etc. on the screen, thus not blocking other programs.

>pro host adaptor.I do apreciate that you read that.

MagiC can be installed in less than 5 minutes although it's a good idea to read the manual first I suppose. Version 4 is probably the minimum to go for, version 5 is the current one. I'm still on version 2 and very happy with it.

I don't know how easy Geneva is to install, I've never tried it.

Just about all Gem programs that use windows will run as will many of the Gem programs that don't use windows. Of those that don't, most can be persuaded to work by installing them as singletasking - all that means is MagiC freezes all the other programs while the singletasking one is running. When it quits, all the others start running again.

None Gem programs, the .tos and .ttp ones, can be run in special windows so that the text they output does not interfere with the screen.

Normally syslogd would be executed at startup time, and pppd would be used for
dialling, connecting and starting the ppp connection, meaning that CoNnect
is not needed at all.

I have a TT030 and MegaSTE connected locally.

>I guess I would try to do it under MiNT although I've never been able to
>get MiNTNET running because I can't install MinixFS. Thus tar.ttp crashes
>when I try to decompress files which are > 8+3.

This is not normal, something must be wrong, because it should not matter
whether you have Minix FS or not - if you use a GEMDOS FS, then the names
should just be truncated. I have never had the crash you mention when I
decompress onto GEMDOS FS with tar. Maybe you have a faulty version of tar?

>So what else... What ports should I use?

Well seeing as one of the machines has no LAN port, you cannot use that. So
that leaves the serial or parallel ports. If you can make your own cable, the
parallel port would be the fastest, but this is no good if you have a printer
on that port, which leaves the serial port. But if your STf has a modem then
you cannot use the serial port, which leaves the MIDI ports. I have never
tried this myself, but I suspect it would be far from perfect. And if you
have intruments connected to the MIDI ports then you are left with nothing,
so you would in that case have to do without music instruments, modem or
printer in order to get a free port for the network.

On the MegaSTE it is not such a problem since you have multiple serial ports,
so if you have a modem on one, you can just use the other for the network.

>The Mega4/STE has a LAN port. Can I somehow connect this with the com port
>of the STf? I would expect that I would have to connect them via com
>ports or serial ports.

The LAN port is a serial port, so just use the serial port instead, with a
normal null-modem cable. But the parallel portis faster, so you should use
that if possible.

That's a good bargain.... my 2nd hand falcon - 4Meg RAM / 84 Meg HDD cost me
US$375. And that's with 4 pieces of software on the HDD only, nothing else.
Not to mention that I have to fly to US to pick it up, well, actually I was
going there on a business trip :-)

Regards
William

Right, hold down all 3 keys - shift, ctrl and alt. It should work. It works
for me, I don't know exactly which key but holding down all 3 works.

However, you may need to run the HDD driver from drive A, since it stops all
loading from the HDD.

Without a command line shell, hitting ctrl-S/Q may be difficult.

I suggest you just get a command line shell - there's one which comes with Gemini which is good, there are several others. However, this means you have to type in the command to change directory and exeute it.

Alternatively, get TOS2GEM which should redirect all TOS output into a GEM window right on the desktop!

Both can be obtained from cnam.fr, use the search to find them.

2327. DSDD 3.5" 720k Floppies in Singapore

Newsgroup: comp.sys.atari.st
Date: 1996-11-08 00:00:00 UTC
From: Richard Cheung <rcheung@stomail.sps.mot.com>
Message-ID: <3282DAE2.41C67EA6@stomail.sps.mot.com>
Source record: 134451
Cross-posted to: comp.sys,atari.8bit,comp.sys.atari.st,comp.sys.acorn.hardware,comp.sys.acorn.apps,comp.sys.mac.apps

Hi there,

Does anybody out there in Singapore uses DSDD floppies anymore?
I have a lot of those double sided double density disks that I cannot
make use of anymore.

They are colour disks and are made by TDK. Anyone inerested, they can
have them at S$9.00 per box (10 disks) or S$7.50 per box for 5 to 9
boxes and $6.00 for 10 or more boxes. I also have some unbranded ones
for S$30 per 50 or S$50 per 100 disks.

They are used in the older generation PC portables (720K), Atari (720K),
Amiga (800K-900K), Acorn Archiemdes (800K) Apple Mac+ (800K) and
word-processors (i.e. Cannon, Brother) etc.

The unformatted capacity is 1MB and formatted to around 720K to 900K.

If any of you are interested, please let me know via email.

Regards, Richard (:-)

2329. MegaSTE, Spectre GCR and more for sale

Newsgroup: comp.sys.atari.st
Date: 1996-11-08 00:00:00 UTC
From: fcctower@efn.org
Message-ID: <fcctower-0711961732120001@dynip107.efn.org>
Source record: 134453

This is a great system, includes Spectre to run Mac software (will not run System 7). I prefer to sell this entire system as a package, but will consider individual offers if the CPU sells. Everything in good condition. An enterprising person could probably buy the whole thing, sell the parts individually and make some money!

MegaSTE 4meg/50meg HD/800k floppy
SM147 monitor (14 inch flat screen, mono)
SC1224 monitor (color)
MonitorMaster
Supra 40meg HD
Golden Image mouse
Spectre GCR 3.0
External 800k floppy
Supra 2400/9600 Fax modem
Supra 2400 modem

Buy just the MegaSTE for $200 or everything for $400, plus shipping.

For an additional $100 plus shipping, I'll throw in all the software, including:

Geneva
MultiDesk Deluxe
NeoDesk 4
CardFile 4
FontFarm
QuickForms
Diamond Back 3
Diamon Edge
Ultimate Virus Killer5.7
Warp9
WordWriterST
WordPerfect
FirstGraph
DataDiet 2
XBoot
VIP Pro
Spelling Sentry
G+Plus
ImageCat
MVG
BaseTwo
Lookit/Popit
ChessMaster2
4 InfoCom and other games

plus much more!

For Macintosh (use with Spectre):
System 6.08
Write Now 4.0
HyperCard 2.0

Plus over 100 PD disks (mostly Atari, some Mac)

2330. TT030 for sale

Newsgroup: comp.sys.atari.st
Date: 1996-11-08 00:00:00 UTC
From: mvrbicky@edu.uni-klu.ac.at
Message-ID: <32831518.6950@edu.uni-klu.ac.at>
Source record: 134454

I have an Atari TT030 for sale.

Includes:
- 8 Mb internal memory (4 Mb ST-RAM / 4 Mb TT-RAM).
- 200 Mb SCSI harddisk.
- 1.44 Mb floppy disk drive.
- Crazy Dots II VME graphiccard (1024x768, 256 colors, 76Hz,
800x600, 65536 colors ...)
Works with every SVGA monitor.
- Installed Linux 68k (1.2.13pl10) with X11R6 (1024x768)
I have connected my TT via a serial line to my PC and it works great
as an X Terminal.
- About 200 diskettes with Atari software, lots of original software
incl. handbooks.
- And more.

All in one sale.
Price: ATS 8000,- (DM 1150,- US$ 800,-),
(bases for negotiation)

More on the OS... like I heard that with MagiC / HDdrive can do multitasking &
DMA access at the same time, while notmal TOS cannot -- same hardware :-)

It seems like Win95 is not so good after all.... I have no experince with it,
ie I have not used Win95 before.

Geneva does not come with a desktop but is usable without. Indeed, when
I first bought it there wasn't a multitasking desktop available so I had
to use it without. I'd highly recommend getting Neodesk 4 though - they
work together beautifully.

That's SysSol told me a while back (before MagiC 5 was released) when I was enquiring as to the differences between v4 and 5. When I upgraded I just got my v4 manual back and a short read-me file on disk mostly about using v-fat. As usual, the MagiC docs tell you NOTHING.

HI, Well, saying that I would guess you have Neodesk with geneva..
Neodesk gives this feeling. It is very nice. And you still can use
Neodesk with Magic, thus you'll have almost the same feeling.
Bye.

That was my point! If you're already hooked, a 68030-> TOS-compatible
computer is not a bad choice. But let's face it, these computers are not
for beginners or casual users. It's just too difficult to get support
and software if you're not dedicated.

The price for one Jag and ~10 games is pretty much the same as a PSX with
ten games, and then you get some great games too. The Jag is a great
machine, but there's not many games available for it.

I know a couple of people that use their Falcons for stuff like this, and
they love it! They also confirm what you say about the timing. This is
people that still have STF's in their studios despite cheap PC's and
colourful windows-(Spit!)-software. ("It get's the job done. These
f**kin' PC's are down half the time!")

>The Falcon was and is designed for music from the beginning. The audio matrix
>system is a piece of artwork.

I friend of mine at the university was stunned when I said my Falcon could
play mpeg-songs without any CPU-load at all. His P100 was just about able
to do the same. The DSP is perhaps the best thing in the Falcon.

Hi,
On Fri, 8 Nov 1996, Daron Brewood wrote:

> Can anyone advise whether it is possible to use a ZIP drive when using AHDI
> as a disk driver?
yes, after trying it for a while I got it to work. My problem was the
SHDRIVER.SYS-file, which I had to edit with ahdiconf. Then it worked fine
(as far as I can tell). Now, the question is, how to read MS-DOS
ZIP-disks, so that I can exchange big amounts f data between my NT-System
and the Falcon. I am hoping that BIGDOS can help me there. AFAIK Magic C
also supports MS-DOS drives, even those with the long file names (which
would be great!).

best wishes,

harry

C-NET can be found on the Web at WWW.C-net.com.
Also if you have the USA channel(which also owns Sci-FI)
You can watch C-net at 5am (central time) on that channel.
dan
(2.50 for one channel or do you get 5 other channels with the sci-fi,
I have Time Warner cable they give us the sci-fi channel,cartoon network
history channel,Plex (formly encore +) and Flix for 1.99 a month (unfortaly
we have to use their cable box to get those channels and we only have one
box and it's in my room)

2349. STARTRACK-HDR-Sampler for Atari (VME-Bus)

Newsgroup: comp.sys.atari.st
Date: 1996-11-09 00:00:00 UTC
From: stepwil@aol.com
Message-ID: <19961109214900.QAA22278@ladder01.news.aol.com>
Source record: 134273

Hello !

I should like to announce herewith, that STARTRACK, the
Harddisk-Recording-Card
for all Atari and compatible systems (TT,Eagle,Medusa and Hades) with
VME-Bus
is now released !
You can see and test it on the Atari-Fair in Neuss (near
Dusseldorf/Germany)
from 30.11. to 1.12.96 at the stand from MW-electronic.

Thereby you can also see the working prototypes from the DSP-extension
(with
Motorolaxs DSP 56001-33 and another extension with DSP 56002-40) and the
XLR-extension (on a professional mixer-equipment) for the sampler in
action.

Ixll be there, and proudly to answer your questions referring to the
HDR-soundcard.

All musicians, music-publishers and interested people are welcome of this
Atari-fear
in Germany !

I have make yesterday an exact soundcheck with this Soundcard, and the
result is,
that the sound of my DAT-recorder (Onkyo DAT-901) is not better as the
soundcard.
On the contrary - partly noise the soundcard less as the DAT-recorder !

I have until now the soundcard successful tested on the following systems:
TT, Medusa T40, Hades 060.
(For all people which it not to know: the Hades is a Atari-compatible
construction
from Switzerland (Medusa Computer Systems) with 4 PCI, 2 ISA-Bus and
1 VME-Bus-connectors, 8 sockets for PS/2-RAM and as processor an MC68040
with 64 MHz or an MC68060 with 60 MHz in a Mini-Tower).

I have make a few tests with the Hades 060 and my Sample-Editor for
Startrack, that me really have knocked-out:

10 tracks mixing and level-adjustment for each Stereotrack at 48 kHz
samplerate
12 tracks mixing and level-adjustment for each Stereotrack at 44.1 kHz
samplerate
16 tracks mixing and level-adjustment for each Stereotrack at 32 kHz
samplerate

Thereby is it important to know, that the mainprogram is written in GFA-Basic
and the sample load-routines also execute in GFA-Basic.
Only the mixing from the tracks is execute in Assembler.
By an optimizing from the load-routines in Assembler is it most likely, that you can more
tracks mixing.
The complete calculating is making by the host-mainprocessor (68060) from the
Hades and not from the DSP.
The DSP can parallel to the hostprocessor calculate DSP-Effects

Altogether (in my opinion) is the Hades ideal for Harddisk-recording.
It have a great System-Performance (more then PCs and Apples ?).

For musicians really interesting and important: The VME-card can you plug in a
special 5 1/4 inch slot in your PC-case. All connectors from the Soundcard are now on
the front from the PC-case. That is very practical and useful, when you often
connect and disconnect the Connectors (Cinch and TOSLINK-Opto).

The Soundcard have following Connectors:
digital Input and Output (optical TOSLINK and Cinch, switchable)
Stereo-Analog-Input (2 Cinch) with 16Bit sigma-delta linear A/D, 64 x oversampled
Stereo-Analog-Output (2 Cinch) with 18Bit sigma-delta linear D/A, 64 x oversampled
Thereby are the Input and Output exactly one after another trimmed i.e. at 0dB-Output-Level
have the Output the same level as the Input. The Output have
CD-Player-level.
You have also a SCMS-Decoder for free-copy from the digital-Input and
Highend Stereo-Volume-Controllers (in hardware) for the Input and optional
for the Output.

The XLR-extension is in a double 5 1/4 Inch-Slot for a PC-Case. The XLR-Connectors
are now on the front from the PC-case. Optional can you have this extension as a
VME-Slotcard.
You have digital AES/EBU Input and Output in XLR-norm and Analog-Input and Output
in XLR with Studiolevel.

The Romport-Card for the Hades is now released.
This card have 3 Atari-ST-comatible, switchable Romports, 2 internal and 1 external for
Romport-Dongles.
This is importand for Cubase Audio, Emagic Notator Audio and other
dongle-protected softwares.
I hope, that this Programs work in the future with the STARTRACK-Sampler.

That all can you see it on the Atari-Fair on a Hades 060 !

My STARTRACK-Homepage: http://members.aol.com/stepwil/index.html
On the Homepage you can download a free Demoversion from the actual Startrack-Editor and
you can read details from the Startrack Hardware and Software.
A picture say more as thousand words: Pictures from the STARTRACK-Hardware and
Software can you see it on the Homepage. The Homepage is written in german, in one
week also in english.

email me: "stepwil@aol.com"

Greeting from Germany, Stephan

Both Dungeon master and Chaos strikes back are 100% falcon compatible.
No backwards required. (runs a little fast in spots). Hey I've even got
falcon to run on the falcon (Backwards version 2.8) use best
compatibility.

From: RCLAUNCH@pacbell.net
Message-ID: <328500F1.430C@pacbell.net>
Source record: 134276

Hello again....

If you are in the southern California area or even if you not, call the BBS.

I have setup up a USER account for any Atari person that calls. No ratios full access first call. Just logon using the following

First Name: ATARI
Last name: USER
Password: FOREVER

If you wish a personal account of your own afterwards just leave a note to the SysOp and I will
set one up for you... The BBS works best with FreezeDRIED term set to ANSI.

I hope to have All the SEWER DOC disks online this weekend....

PC-Widowmaker BBS (909) 637-1274 28.8 baud

See ya Richard

>modify the cable ?

You do *not* have to modify the cable or the link. All you have to do is
to make a new (very simple) cable. The following explanations are from the
READ_ZIP file provided with the ICD-Link II I bought:
>How to get power for your Zip drive:

>board!

That's correct. I upgraded my own STe from TOS 1.62 to 2.06 by purchasing
the two EPROM chips.
Be sure to insert them in their correct sockets (they're marked "hi" and
"lo" and so is the areas on the computer circuit board).
As for the "jumpers", here's a diagram showing how it's set up with the
"old" TOS, and how it should be done with TOS 2.06.

You may also note that by connecting the two sides of the "E6 jumper pad"
on the circuit board together you'll get access to an extra option in the
desktop "format disk" menu- namely HD format.
You do ofcourse have to install a HD drive with the appropriate circuitry
to get this to function, but you will at least have the menu option there.
Good luck!

Hallvard

Sounds like a cool idea, maybe someone could put out a patch program or
something.

This game BTW is so cool, they even released it on CD-ROM for the PC. And
they kept the orginal name "Chaos Engine" and not use "SOlders of Fortune"
like for the Sega and Nintendo systems. Did you know on the consoles they
changed the Preacher to the Scientist? That rots! :)

The game was based off the Movie, not the other way around.

Also, 'Cloak and dagger' is being made into a new Television series. I am not sure with network tough. I think it will be out next season (or as a mid-season replacement this season). FYI

Can anyone tell me what all this MEOW stuff is about?
I don't get it! I know I'm missing something.
I MUST be something good since 1/4 of the messages on
various newsgroups have a MEOW.

Any info. or even a FLAME telling me I must have lived in
a hole for 5 years would help. What's the big deal with MEOW?

Demon only send email via smtp, therefore neither Newsie nor Antmail will
work with a Demon account. Stick to either NOS or Oasis2 because ATM there is
no smtp email client for use with STiK :(
By using Newsie or Antmail you will only be able to send email NOT receive
it!

] clumsy... ;-)

Fully agreed. I use TeX all the time on the TT and it is very easy and ver
quick. I tried Latex2e but saw no benefit so I am still using Latex2. Sounds
like I use the same Gemshell as Jo as well.

If you can get your head around the setup and latex macros you will be hooked
for life...

>
>How can they say that MagiC 5 have got threads, when you need NVDI 5
>to use them? I don't belive it. :-\

I think people are probably a little confused about threads!

Having seen the postings in this 'thread' and not having spoken to Sys Sol on the subject (so I'm guessing), I suspect that what they meant was that NVDI does not USE threads (until v5). Threads MUST be part of Magic5, they have absolutely NOTHING to do with NVDI.

Threads are simply a way of launching another process (subroutine) of a program so that it multitasks with the main program. ie. NVDI could make good use of threads for printing etc. (maybe?)

The ability to 'thread' a program will have absolutely nothing to do with NVDI!!

Don't get too caught up on the buzzword of 'threads'. Their use (to be honest) is rather overrated!

I hope this helps clarify things :)

>also to edit PASSWD file, to enter your name and username.

You're right, we forgot to include that information. The problem is,
you see, Okami was originally only a front-end for UUCP, and
especially Hermes. In that set-up, the necessary folders were all
there, or, if you imported news and mail with tin, were created
automatically by unzipping the downloaded files. The SOUP facility
was only built in later.

In the new version, all necessary directories are always created when
they don't exist.

I need some testers for LTN v1.2
so if you used the old version or you would just like to give
it a quick test email me. It is a programme which teaaches the internet.

I just want you to check for spellings,bad links,things which should not
happen.

If you are intressed email me at:
Stuart@shaw1.demon.co.uk
DO NOT REPLY TO THIS MESSAGE

Thanks
Stuart Shaw

PS. You can only test it if you have a ST and a colour monitor.
I would also be intressed if people will be willing to colmple
it on newer machines.

> much trouble!

I'm also having trouble installing CBHD 4.56. I wanted to switch from ICD
5.4.0, which works well with Minix filesystems.

Although I don't have problems reading the documentation as I'm a German, I
think it's very confusing. The description of configuration settings is missing
and the purpose of the package's different components isn't described either.

There are 3 progs in the packet: CBHD.PRG, CBHD0.PRG and SCSIDRV.PRG. There is
also a SCSI.RAM. What are these good for?

> Here is how I did it - maybe there are some unneccesary steps here but
> this works:
> 1.Have the machine in normal ICD boot up configuration.
> 2.Re-name ICDBOOT.SYS (e,g. to ICDBOOT.SYX) to stop it being loaded.
> 3.Copy CBHS.PRG to the root directory of the boot partition and rename
> it to ICDBOOT.SYS.
> 4.Re-boot the computer. The old ICD boot code will load the CBHD
> driver.
> 5.Run CBHDCONF.APP and "Install". This will write boot code to
> load CBHD.SYS.

I followed your instructions verbatim (with CBHD.PRG), but all I got when
rebooting the computer was:

----8<-----------------------------------------

[ welcome banner ]
Initializing SCSI Driver...
Scanning Busses...
ACSI... 01 02
scanning done
00.01.0 Hard Disk FUJITSU M2682S-512 C D E F G H I
00.02.0 Hard Disk SyQuest SQ 555 J K L M
```

SCSI driver not installed
Installing ACSI-Buffer
AUTO folder : C
ACCs/DESKTOP.INF: C

----8<--

Then there were 11 bombs across the "SCSI driver not installed" line.

Here's what the German installation docs say:

----8<--

To install the CBHD harddisk [driver] you preferably should use SED if you have it. SED is the sector editor from the Scheibenkleister [book] which is freeware as source text.

You may use CBHDCONF alternatively.

Starten sie dazu zunaechst einen SCSI-Treiber, also CBHD.PRG oder SCSIDRV.PRG.

First start a SCSI driver (CBHD.PRG or SCSIDRV.PRG).

After that you can make a drive bootable with CBHDCONF ('Installieren' menu entry). Following this you have to copy CBHD to CBHD.SYS onto the corresponding partition.

CBHD0 itself doesn't have any routines to use the interfaces of the Atari, it uses the routines of the SCSI driver instead. So CBHD0 can also be used on a Macintosh running MagiCMac.

BTW: CBHD.PRG is also using the routines of the SCSI driver and doesn't use own routines if the buses are already served by another driver.

----8<--

I think it's a bit confusing: if CBHD.PRG is the driver, what is the SCSI driver CBHD uses as mentioned in the documentation?

After unsucessfully trying to install CBHD on my harddisk, I re-installed ICDBOOT.SYS and prepared an autoboot floppy with CBHD.PRG in the auto folder and SCSI.RAM on A:\.

I made a warm start pressing CTRL-Shift-Alt before the floppy drive was accessed --and it worked.

But how do I get the stuff working on harddisk?

Looking for clues.

Sure is, and I'm glad I registered it- it's definitely worth the cost.

Can iconizing be done using regular TOS? I thought this was just for
multitasking systems... I guess that's what you mean.
I couldn't find version 2.0 anywhere, but I did download 1.5.
Where can 2.0 be found so I can check that out as well?

>Launching a program is quite simple. Just open the Freedom.acc,
>select the program you wish to start and do a right double click

>AFAIK, this feature won't work from the normal desktop. Desktops
>like Gimini 1.999, Neodesk/Geneva, Thing 1.09 have no problems
>with it.

Hmmmm... I knew there had to be a catch :-(
I've got Gemini, but I only use it for accessing the UNIX type terminal
when I need it. I don't like having too many things on top of each other
(like Windozzze etc.) It's nice to just switch on the machine and the
operating system is right there, and when you reset the machine you don't
have to re-load it. I'm pretty happy with TOS 2.06 actually.
But then again I haven't tried anything "better" on the ST, like MagiC etc.

Adrian Bridgett (apb25@apb25.emma.cam.ac.uk) wrote:

: TEX is a typesetting system and the version you have is unlikely to be a
: pirate copy (I think it is GPL so it would be illegal *not* to make it
: free). Unfortunately it is probably an old version.

Depends...TeX 3 came out a while ago, and versions since then have been
pretty much small bug fixes while the version number converges to \pi. It
can be easily upgraded by simply replacing the TeX binaries with a newer
version, although a complete reinstall would likely be better.

: The unfortunate people who use TEX normally use LaTeX 2e which although
: built on top of TeX is easier to use. It is very slow on most computers. The
: idea is that you type your document in LaTeX, then run it though the LaTeX
: compiler to produce a .DVI file which you then convert into PostScript using
: dvips. Finally you use GhostScript to print this out on your printer. Phew!

Hey! I run TeX, and I'm not unfortunate! :) Considering that TeX was
designed to run on minicomputers, it's not really surprising that it's
slow on slow machines like an 8MHz 68000. Once it's loaded on my TT, it
chews through pages very quickly, and on a fast, well-configured PC
running FreeBSD, it blows through large, complex documents in seconds.
The printing process isn't as bad as you make it out to be. A half decent
TeX package (such as CS-TeX) will have DVI drivers for various popular
output devices. Admittedly, most TeX output does seem to get converted to
PostScript (I usually do that, since I have easy access to a PostScript
printer, and the output quality is stellar).

: I've heard of these units:
: JAZZ, PD/CD-ROM, MCD540, PCD-2000, ZIP SCSI, EZ flyer 230, HS650, Syjet.

: Could anyone help me to choose a unit, wich wont be abandonned?
: (I need a SCSII-internal one)
: are they recognised by any of the atari drivers (wich one)?

What you refer to as the JAZZ drive is likely the Iomega JAZ drive: 1 GB capacity, and supposedly very fast. The PD/CD-ROM is the Panasonic Powerdrive, a combination CD-ROM and re-writeable optical disk. The next two a probably optical disks. The ZIP drive holds 100 MB on a floppy-like disk, and is not as fast as the JAZ drive. The EZ flyer 230 is made by Syqyest, and is the followup to the EZ135 (although Im not sure if it's actually compatible). I don't know about the next two. Depending on how much money you have, you should probably go with the JAZ ($500 US) or the EZ Flyer (probably cheaper). Both Syquest and Iomega will continue supporting their products. The Panasonic mechanism will also likely continue to be supported, but it's sort of an oddball piece of hardware, and optical drives write slowly. You shouldn't have any trouble finding SCSI mechanisms (the JAZ may be SCSI-only, as a matter of fact).

As for drivers: ICD should work, but it seems not to be supported any more. Your best bet would be HD Driver, which is very actively supported on this newsgroup.

Matthew C. Faehnle (faehnle.2@osu.edu) wrote:

: I tried the PPP-kit and it says that it only works on single systems. Is it
: possible to make it work under Geneva?

I assume you're talking about the PPP kit that was made available using
Mint/MintNet without having to install a MinixFS partition. If you are,
it requires Mint and MintNet. Geneva 004 can be run on top of Mint, but
it's not very stable. Geneva 005 is supposed to be more stable.

: Also, I have been having trouble getting Mint to work with Outside virtual
: memory manager. I need MiNT for PPP but I also need Outside as I am short on
: memory (and $). Does anyone know how to make this work - it laymans terms
: please, I haven't a clue when it comes to using mint.

Make sure you have memory protection _off_, and run Outside before MiNT
from your AUTO folder. Alternatively, you could get FreeMint 1.14, which
has VM support built in, supporting up to 64 megs.

I have an Atari Stacey I'm selling for Parts, to be sold for parts. Not to be repaired. If you wan't to try to buy it to try to repair it? I'd advise against it. It is one of the first ones off the Assembly Line, without batteries. It's Switching Power Supply has been tested & works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold. Unless, of course, It's sold with the Stacey. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

2383. Problems with ICD->AHDI driver (cont.)

Newsgroup: comp.sys.atari.st
Date: 1996-11-09 00:00:00 UTC
From: RCain@nest.demon.co.uk
Message-ID: <481_RCain@nest.demon.co.uk>
Source record: 134340

Hi hallvart@sn.no, on 06 Nov 96 you wrote:

h> And with CBHD it displayed the same partition sizes when I went into
h> the "partition" menu. There should be nothing on the drive after a
h> format, right? So CBHD certainly shouldn't know how big my partitions
h> were.

Right! Clearly the isc was not formatted.

h> I formatted it anyway using AHDI 5.0 which took a veeeerrrry long
h> time! Then I tried to partition it using CBHD, but for some reason it
h> wouldn't let me use the full capacity of the drive. I think it let me
h> have a maximum of 525 Mbytes totally while my ICD software lets me
h> partition 550.73 Mbytes which should be more like it since the drive
h> specs for my Quantum Lightning 540S is 550 Mbytes (not 540 like you
h> might have thought). (and yes- I did set it to "AHDI compatible").

Funny! There are quite a few problems here (see comments on partition data
later) but it is worth bearing in mind that partitioning is new to CBHD
v4.57. There could be some bugs at work.

h> After partitioning it with ICD's software I tried to re-boot the
h> machine with CBHD on a floppy. After that I tried to install the
h> driver, but it didn't work.
h>
h> It seems that you have to change some parameters (if only to press
h> <cancel>) in order to get the driver to be installed on the drive, so
h> I tried to enter the menues in "cbhdconf.app". Sometimes I got to save
h> the driver after entering a few menues, sometimes the mouse pointer
h> just went away and it locked up (not even <CTRL-ALT-RSHIFT-DEL>
h> worked-
h> I had to press the reset button on the back of my STe).
h> And the drive would never boot by itself.

Yes. I had problems "installing" the driver (this writes physical sector 0
saying "load the program called CBHD.SYS"). In my case it would not work if I
just ran CBHD.PRG to substitute for the driver already loaded but did work if
I got CBHD.SYS loaded at boot time by fiddling around with file names.

Note that "installing the driver" (writing to phys. sect. 0) is NOT the same
as configuring CBHD.SYS.

h> FAT-buffer 16 sectoren
h> DIR-buffer 16 sectoren
h> Zus�tliche ordner 16
h> sectorgr��e 512 bytes

These are similar to the things you can configure in ICDBOOT.SYS:

FAT& DIR buffers (I have mine set to 100)
Additional folders (I have mine set to 100)
Sector size (leave this at 512).

h> Should I perhaps edit something else (or to a different value) in
h> "cbhdconf.app"? I'm not really sure about the sector size/FAT
h> buffer/DIR buffer or whatever

These will not be important but, for your system, should be larger than they are set at the moment.

h> Drive Bytes Secs Bytes Secs Secs 1st Totl
h> ID Start per per per in in 2nd Data Data FAT
h> Disk C LUN Sec Size Sec Clus Clus Dir FAT FAT Clus
h> Clus Flag Change S ----------
h> -
h> ------------------------- ***** (Quantum Lightning 540S) *****

Urggghhh! I've just tried quoting the table from the ICD Utils - it has got all garbled.

Anyway, this shows that there is a lot wrong! Sectors/cluster should always be 2 which means that bytes/cluster is always 1024.

The no. of sectors in DIR and FATs is far to large for the first partition on each drive.

h> Can anyone figure out just what exactly is going on? It doesn't make
h> much sense to me. Why won't my Quantum drive act the same way as my
h> Hewlett Packard which worked without problems using CBHD?
h> Regarding those values above, do they have anything to do with my
h> problems?

Almost certainly!

Some probs. may be caused by the new CBHD partitioner - other confusions may come about because you are mixing your HD utilities. I have a 330Mb HD which was formatted by ICDFMT to be AHDI compliant. Apart from having a bit of trouble "Installing" sect. 0 things have been working perfectly for around a week with CBHD 4.56. So why not make a fresh start and do this:

Boot up with ICD driver.
Format and partition the Quantum.
Install the ICD driver on it and check that it is bootable.
Copy CBHD.PRG to the boot partition and remane it ICDBOOT.SYS
Boot up (you should get the CBHD driver in!)
Run CBHDCONF and choose "Install" to write a new sector 0 which will look for CBHD.SYS
Restore the correct name to CBHD.SYS
Boot - all should be OK now.

I never get used to the plain TOS-desktop. Since my first ST I always
have used an alternative desktop. Neodesk, Tera, Gemini, No Desk and
now Thing (with or without N.AES)
IMHO: The main minus points of Freedom are the hassle to setup the
whole thing (since v2 things are going better) and some
incompabilities with some (mostly older) programs.

>in jpegs???????????

The jpeg bug is hopefully soon to be fixed.. there seems to be lots of
work at tracking it down on the developers list at the moment. Dan
also said recently that in his spare time (very limited at the moment)
he was going to try to figure out why the new cab.ovl doesn't work at
all for some people.

Nick.

Well, in Germany, it certainly did, and it's still available. Bad thing
is, Atari/JTS "sits on the rights" since they bought this neat little
machine. BTW, I've seen a JTS hdd last week.

I wouldn't go for the JAZ or EZ drive, the disks are expensive and SyQuest (EZ) is known for the lack of reliability of their newer drives. The ZIP is quite cheap, yet the disks are (per MB) about as expensive as JAZ disks, and it sells _very_ well. The PD-Drive is affordable, the disks are cheaper, and it's CD compatible, so you won't need an extra CD-ROM. I'd - depending on the amount of money you want to spend - either go for the ZIP, the PD or an MO drive (the 640 meg 3.5" drive by Fujitsu, e.g.), unless speed is of importance to you, in that case the JAZ should be your first choice.

All these drives run with Uwe Seimet's HD-DRIVER (the PD needs a CD driver software to read CDs, of course). Other drivers are also supposed to work, but the write/read protection on the ZIP is not settable without extra software, and HD-DRIVER comes _with_ a ZIP CPX.

I'd also like to advise a CD Writer instead, yet the software I know costs about 500,- DMs (~2000 FF), which is not too much for a Red Book Audio CD capable writer software, but too much for those who don't need that feature.

I'd just like to say that I think TeX is a superb bit of software. It is reasonably fast on a bog standard ST and the output does not have to be converted to Postscript as there are plenty of drivers available for most printers. It's absolutely free, works on any platform and typesets properley (unlike most other packages).

Now if someone could tell me how to install Latex2e on an ST I'd be even happier ;)

Also if anyone knows of a version of latex2html that will run on an ST or 286 Dos PC I'd love it (so far I've only found a UNIX version)

The downside of Tex is that it gobbles up loads of hard drive space especially if you like lots of fancy fonts.

BTW all of my company's publicity material and equipment manuals are produced with Tex. I just print samples on the office BJ300 and if they look OK I know that what I send to the printers as 600dpi postscript files will look exactly the same, only better (if you know what I mean).

"Looks" have very low priority, but send me your modified .rsc. As for
non-modal dialogues - that would mean rewriting large parts of the
program. I don't know if anybody wants to do that.

How about Forecast? I haven't been able to get it to work at all
with the latest versions of STiK.

2394. Advantages of Optional Gemulator Setups?

Newsgroup: comp.sys.atari.st
Date: 1996-11-09 00:00:00 UTC
From: komives@holly.ColoState.EDU
Message-ID: <5626lu$6kpu@holly.ColoState.EDU>
Source record: 134351

Advantages of One Gemulator Setup Over Another.

I am shopping for a PC-Windows system to which I wish to add a Gemulator.
My key need is to run Pagestream, followed by Wordwriter ST and LDW Power.
My question is this:
Cost aside what are the advantages of each of these relative to
the other:
Gemulator 96 + MagiC
Gemulator 96 + ROM card with TOS 1.4
Gemulator 96 + ROM card with TOS 2.06

I now run a 4 meg 520STE with TOS 1.4.
I got good information off the emulators web site, but using Lynx I did not
(could not) get the benchmark specifics (assuming speed is a factor
in this comparison).
thanks,
bob komives

FOR SALE AND PRICED TO MOVE QUICK:

Atari SLM804 Laser printer with phantom modified interface, extra paper tray,an almost new toner, manuals, software, and original box. The phantom mod adds power to the interface so that the printer can be powered off and still hooked to the DMA chain. Without the modification, an SLM needs to be powered on or a connected DMA hard drive will not work. I am asking only $125 for the whole setup, plus shipping - a real bargain!.

I live in California for shipping considerations.

If interested, please email me at RJRE@AOL.COM

]
] Ahh, so you're not using an Atari for this. No wonder it's slow and
] clumsy... ;-)

Fully agreed. I use TeX all the time on the TT and it is very easy and ver
quick. I tried Latex2e but saw no benefit so I am still using Latex2. Sounds
like I use the same Gemshell as Jo as well.

If you can get your head around the setup and latex macros you will be hooked
for life...

Regards,

emwoll@emw.ericsson.se "Magnus Kollberg" writes:

] Freedom have some nice features that Selectric hasn't but I like the inteface
] of Selectric much better. Freedom uses it's own ideas.
]
] > What features does v2 have compared to 1.5?
]
] Well, it works like controlpanel now, like Xcontrol or Z-Control and it's a
] very good control panel as well. Looks much nicer too. It does also support
] ECPX's which are very nice indeed.
]
] > I didn't find any CPX control panel or "launch" feature in 1.15...
]
] That's because you need F2 to get that.

2 problems though (I have only seen the demo), some cpx's lose their set-up
(sound and NVDI config). Also, either Liberty of Freedom affect programs like
Kandinsky/Arabesque 2 (no display), and crash the MagiC vt52 window. Also,
Freedom doesn't seem to save it's window positions in the config file.

Bummer. It looks like a great program too. The interface is really slick. But
if it *is* responsible for the probs I have found I won't be buying it.

>address--it's a forged troll that is an attempt to get this person
>killfiled--don't do so)

Not to worry. Matthew Bruce, the real Matthew, has authorized me to cancel
any and all articles _anywhere_, that claim to be from him. And I'm
doing so.

The real Matt Bruce isn't posting anything, so killfile if you wish to
avoid the forged junk.

If you have the capability of killfiling on "Austria.EU.net" being
in the Path line, you will want to do that.

Yet another open NNTP port.

2411. Re: TOS 2.06/'Newdesk.inf': "system out of memory" ???

Newsgroup: comp.sys.atari.st
Date: 1996-11-10 00:00:00 UTC
From: tjh@ic.net
Message-ID: <tjh-1011961004340001@p12.hubbard5.t.ic.net>
Source record: 134218

> h> Ah! I see.
> h> I just had a look at my newdesk.inf and it's at 4148 bytes...
> h> No wonder I get that message then. Do you know of a way to allocate
> h> more memory for this file?

The NEWDESK.INF can't be larger than 4kb (4096 bytes), and I've found that it starts causing trouble with the system around 3900 bytes. Similarly, the DESKICON.RSC can only be 64kb (65536 bytes). The newer DESKCICN.RSC (the color icon resource for TOS 4.0x and up) can be larger than this, though I don't know if there is a limit. If you try to exceed the limit, you'll get "Out Of Memory" errors and lots of headaches.

On earlier versions of TOS (less than 2.0x), the limit on DESKTOP.INF is even more restrictive; it can't be larger than 1kb (1024 bytes)! However, you also don't have a lot of icon assignments eating up that space, so it's a fair trade.

One excellent way around this is to create different INF files for different tasks. You can have one for telecomm, another for wordprocessing, and so on. If you put only those application and icon assignments necessary for a particular task, you should have no problem avoiding the size limit. To switch between INF files, then you can just install either Charles F. Johnson's shareware product "Desk Switch" 1.1 or Klaus Pederson's freeware "Load Inf" as the application for file types of *.INF. That way, when you want to change to a different task, just double click on the appropriate INF file, and away you go with all the key assignments, installed apps, desktop icons, and icon assignments you want for that task.

Another way around this is to get a program like GEMRAM, which loads GEM into RAM, and the program Shell Buffer (SHBUFxxx.PRG), which lets you configure the allowed size of the INF file. Shell Buffer only works when GEM is loaded into RAM. The downside of this is that it reduces the amount of RAM available for other applications. On the positive side, you can also use WINX, which makes some nice improvements in the interface, and having GEM in RAM speeds up most GEM-related tasks. There are several programs like GEMRAM that work with different versions of TOS: GEMRAM should work with everything up through TOS 2.06, while ROMRAM should work for higher TOS versions.

I have all this and much, much more info on the DESKTOP.INF/NEWDESK.INF files. Visit my web site at <http://ic.net/~tjh> and click on the Atari link, or point your browser directly to <http://ic.net/~tjh/atari/desktips.html>. If you don't have a browser, email me and I'll send you an ASCII version.

Regards,

Tom

>same modem as me, and their setup run 3 times slower than Stik and
>Cab.

Uh, and what machine do you have? CAB works alright and shows
everything I've tried pretty nicely, the only problem is that
it's so slow. Loading a page takes ages. And the problem is
even worse as it pretty much loads the whole page before displaying
it, and doesn't show the page as it loads it like Netscape does.
Of course this might be because I use MintNET but somehow I
doubt it. It's the cab converting the page..
And I'm using Falcon, so it's not even the most pitible
Atari machine out there.

Other than the slowness, CAB works beatifully.

2413. Re: Can`t get HSM7 to work with Mintnet?

Newsgroup: comp.sys.atari.st

>Coprocessor violation. Please reboot.
>
>Anybody knows why I get this error?

Yes.

When you load HSMODEM after MiNT, it overwrites MiNT's
io routines. Thus MiNt's extra features like locking
and sharing and what else get lost. Now when MiNT aware
programs try to use these features, results like
you have discovered happen.

You'll have to put HSMODEM to load before MiNT, then
there is no problems. But then there isn't speed up
from HSMODEM, but probably with a TT you don't need
the speedup from HSMODEM.

From: Adrian Bridgett <apb25@apb25.emma.cam.ac.uk>
Message-ID: <564uto$i9i@lyra.csx.cam.ac.uk>
Source record: 134221

Oops - I think my thoughts on LaTeX differ with people! It does have its good points, but it is not a DTP program, aligning things can be difficult. I would not call LaTeX fast by any stretch of the imagination. It is fine when it somes to printing where my DeskJet can't keep up, but for bug-fixing - for instance aligning things or correcting overfull tables - it is a pain to have to wait for it to format 100 pages or so. I do like the contents page handling though.

Where can you get dvidj programs for Linux (preferably ones which would cope at several resolutions and qualities - for instance printing 300x300 in draft mode (on a DJ600), 600x300 at normal and 600x600 in best?

Particularly on an Atari, it seems a bit strange for people to prefer LaTeX to a nice GUI WYSIWYG DTP program (phew - quite a few acronyms in that lot!) It would nice to combine both types of programs in one - a DTP program with good style handling (which most have) and the ability to cope with 300 page books.

Adrian

2417. Small Atari auction, update #2

Newsgroup: comp.sys.atari.st
Date: 1996-11-10 00:00:00 UTC
From: smedley@gte.net
Message-ID: <564v6f$9vp@news3.gte.net>
Source record: 134224
Cross-posted to: comp.sys.atari.st,rec.games.video.atari

Well, I am a pack rat - especially when it comes to video game stuff
and computer equipment. So every now and then I take a good hard look
at my collection and get rid of what I don't need. Usually it will be
a piece of hardware I no longer use. Or my wife just wants it out.
Well, for what ever reason, here are a few items I have for sale.

Auction rules -

Bids will be accepted until Saturday, November 16th. At that point the
auction will go to a "going once, going twice" format, with updates
sent by e-mail to all participants. The auction will end NO LATER THAN
Thursday, November 21st (Turkey Day). If there are still competing
bids for an item when I check my e-mail that morning, the highest
bidder in my mail box gets it. Bid increments are a $1 minimum.

Shipping to be paid by buyer. All items shipped COD.
(I will pay COD charge, since I insist on shipping that way.)

-=-

Item #1 - Atari TT030 workstation

4 megs ST RAM
TOS 3.06 ROMs (USA)
720K floppy drive
120 meg hard drive
Long-range printer port modification
Revision H motherboard (will accept CaTTamaran 48Mhz upgrade)
Includes AtariWorks, Civilization, and a few misc. games

This system was formerly used to control an automatic embroidery
machine, which is why the transmission distance on the printer port
was boosted (sorry, but I don't know what the actual range is). The
floppy drive is actually a 1.44 meg mechanism, the system lacks the
Ajax driver chip required to do 1.44 meg read/write operations. (BTW -
Toad sells these chips for $40.) Keyboard & mouse included. Has been
packed away in my closet for some time, so clock battery is probably
dead.

Current bid: $200 by ghaddrel

-=-

Item #2 - AlberTT VME graphics card (x2)

1024x768 w/ 16 colors (compare to TT medium res of 640x480)
VGA output (48 Khz horizontal scan rate @ 1024x768)

This card requires a minimum of 4 megs ST RAM to operate. I have two
of these, so the second highest bidder gets the other one. They should
be compatible with just about any GEM program that recognizes the TT
video modes. (I gotta admit, I have not tried them with anything - my
monitor went on the fritz right after I got the cards so I haven't
hooked them up. They do work, though - saw them tested before I paid
for them.) I have no idea if it will work on a Mega STe.

Bid on card #1 - $30 by ghaddrel
Bid on card #2 - min $30

-=-

Item #3 - Hand scanner w/ Touch Up software

400 dpi scan resolution
Cartridge port interface - no SCSI hardware required!
Includes Touch Up edting software

Everything works great in this package, and the scanning/editing
software, Touch Up, is a fantastic package. Will work with any ST,
STe, TT, or Falcon. In their most recent catalog (95-96) Toad sells a
similair scanner for $109, plus another $39.95 for the software.

Current bid at $27 by RCLAUNCH

2418. JPEGD/CAB and the new jpeg.ovl - problems

Newsgroup: comp.sys.atari.st
Date: 1996-11-10 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <51347326_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 134225

Has anyone managed to get the new jpeg ovl (that uses the Brainstorm DSP decoder) to work?

I've tried it, without much success :(

The JPEGD program itself seems to lock up an awful lot under Magic4/5 and it just hangs. But even when it doesn't hang. I just get a white rectangle instead of an image. It's not memory related (before anyone suggests that) because I've got 14mb!

Also, does anyone know which version of jpegd is the latest and/or most reliable? I've got 3 different versions of it now, all a different size and different dates, and they all 'seem' to claim to be the same version number :(

I have noticed (when using jpegd with Imagecopy etc) that it refuses to load some jpegs and that is to do with the fact I have PowerUp2 fitted. But the new cab ovl doesn't work with or without it!

Is it just me or does anyone else find jpegd to be very unreliable (which is really a shame because it's a superb idea, now if someone would just write a gif one too)?

2419. FS: Atari system, soft, mags

Newsgroup: comp.sys.atari.st
Date: 1996-11-10 00:00:00 UTC
From: tjh@ic.net
Message-ID: <tjh-1011961012050001@p12.hubbard5.t.ic.net>
Source record: 134226

The following items are still for sale! Great prices for a lot of great Atari equipment!

The 520STfm, color monitor, and printer are all in excellent condition. No dirt on the cases; they were used in a smoke free environment and kept covered when not in use. Hardly used in the past few years. All three come in their original boxes. To the best of my knowledge, the monitor is the JVC model--the only one we had that didn't break or have an unbearable buzz.

All software comes with manuals and, in most cases, original boxes. Of course, some of it never came with a box in the first place...

All software and hardware has been tested (used fairly often, actually) and worked at the time.

All magazines have lots of reviews, articles, and disk-based mags have software, some of which is not listed.

Add shipping to all prices. Orders of $100 or more receive a 10% discount.

Prices and terms are _flexible_, so make me an offer!

Questions? Ask away!

Please send all offers and inquiries to the following address:

Yes, I noticed! It works fine if you've got the "Selectric" file selector
(probably Freedom and other types as well), but I've been installing the
driver without any ACCs or AUTO programs, for less chances of conflicts.

>Once selected, choose menu "TREIBER" again, then "ALLGEMEIN" (general)
>A selection bar pops up in the upper part of the appearing box. There
>you can change buffer parms - depending on the amount of memory
>available to you, you might want to increase those. The for parms that
>can be changed are : FAT Buffer ... Sektoren (sectors), DIR Buffer,
>zusaetzliche Ordner (additional Folders, for TOS 1.4), Sektorgroesse
>(sector size).

I'm not sure if I understand what these values all mean.
I can probably forget about "zusi¿½tzliche Ordner" since I use TOS 2.06.
But what about the FAT/DIR buffers and sector sizes? What are they for and
what do they do?
I managed somehow to install the driver without any bombs when changing the
sector-size to another value. Does this have anything to do with how the
drive is partitioned?

>Next thing to check is "TREIBER" -> "LAUFWERKE" (drives)
>The upper part reads "Freie Laufwerke" (free drives). This part tells
>CBHD, which drive letters can be used for the HD's and which are
>blocked (e.g. if you need your CD-ROM to be drive F, just de-select F
>in this box).

But I don't understand the numbered part there... SCSI IDs?
I guess selecting only the actual partitions which you're using and leaving
the left out makes the driver boot faster as well..

>The lower part reads "Schreibschutz" (write protection). You can write
>protect every drive you want.

Does this mean that the drive is protected against a "remove/zero
partition" and format, or just that nothing can be written to/deleted from
that partition? If that's the case I guess it's not the kind of thing which
is used that much since I have software/data on all partitions which is
written to all the time.

[ ] "ALIA identifizieren" (identify ALIA -> Atari LInk Adaptor, a
>german hardware project from the computer journal c't, I think). If
>you do not have an ALIA host adaptor in your system, do not check this
>box. It will slow down your system, as CBDH looks for one.

Ah, I see! I thought ALIA had something to do with a "standard" host
adaptor for Atari computers.
I'll have a look in my list over C't projects for this adaptor- might be an
interesting project for my dad's STe since he has no harddisk.
Do you have any information about it?

>[ ] "ICD identifizieren" (s.a.) I assume that you have an ICD adaptor.
>Leave the box checked if this is the case.

Yup. An ICD "The Link II".

>[ ] "Hintergrund DMA" (background DMA - only check on
>computers/systems that can handle this transfer - my 1040ST gets a
>little spooky if I check this box).
>The last box is self explanatory.

Yeah, I don't need any any of that since I don't have MagiC or any other
sort of multitasking system.

>The only thing to do now is to save the driver with its new settings.
>Menu "TREIBER" -> "SICHERN" (save)

Yeah. Pretty important ;-)
Seems like the driver won't install itself unless something is edited. The
bootsector of the drive has to have something saying "find CBHD.SYS on the
boot drive and read that data", right? So CBHDCONF.APP is needed to install
it- it's not enough to just copy CBHD.SYS (CBHD.PRG renamed) to the
boot-partition...?

Thanks for the explanation! Finally I got a lot of my questions answered.
I will have a look at your message again when I get the basics working
properly.

It seems as my drive has problems communicating with the configuration
program- Claus Brod has kindly offered to look into this, so I hope I'll be
able to use my drive with it soon.

>I hope this works out, otherwise you might go on questioning.

Thanks. Your explanation has helped a lot, but as you see I have even more
questions now ;-)

>This is apparently not quite correct, uucpbe should always be set to 1
>unless you're using Hermes < 1.10.

Well, I've got mine set to "0" and it works fine with email and news!
(I just set everything like the "o.inf" comments told me to.

I can't understand what Okami has to do with differentiating between email
and news import. I always thought that Okami would import whatever the SOUP
packet contained. Now, if your SOUP packet only contains news because you
asked the UNIX system to download just news, well that another matter
entirely....

Anyway, whatever works. Glad you made it.
(now the next step is to get your sysop to get hold of the Okami newsgroup-
if not, use the address I posted elsewhere in this group so you can access
it anyway).

>> seem all that stable either.

I have been using MagiC4 and now MagiC5 on my TT for ages I have no
crashes. I found Geneva which I used for a year with all the latest up
dates etc crashed a lot and wiped out the system regulary. On the
falcon front I used a 14 meg falcon for a year and found it crash
prone. When I do get a crash in MagiC4-5 it is usually 2 bombs but not
a system wipe out. Hit cleanup and everything works fine. It is
important to check which CPXs you are running. I use the beta version
of Zcontrol 2.5 Freedom 1.5 do not use wincolours unless you have the
latest version 1.05 this will cause problems so will several rouge
CPXs.

I have found that many more programs will run under MagiC properly
than wil run under Geneva 00x. Also MagiC is way faster. Geneva is
very very slow. also uses more ram than MagiC.
>
>I run MagiC 5 and it is no more stable than version 4 was. What version

I thought this "meowing" was supposed to have been stopped. This really is getting annoying. A little joke from time to time is cool. I have no problem with that, but this recent bunch of threads has been out and out repulsive, vulgar, insulting, and stupid! This newgroup is not the place to discuss "uses for dead christians - whether or not scouts are religious". It's not the place for spewing profanity at the reader justd for the sake of "pissing people off". It may be a fun thing for the poster, but it destroys the usefulness of the newsgroups, and ruins everything for everyone! Haven't people learned yet that it's idiots like these who, by thinking they're being sneaky little anarchists who are out to abolish the rules so everyone can be "truly free", force the people truly in charge of things (no, guys -- you meowers aren't running the newsgroups, you're destroying them) to create more rules in an attempt to control this, and it spirals into stupidity! You meowers out there are killing this useful forum in a pseudo-attempt to be humorous and cool. You're not! You're stupid and not cool! Please stop this now!

Message-ID: <E0oAuv.3p9@freenet.victoria.bc.ca>
Source record: 134235

Can anybody tell me the current status of "The Computer Dungeon"? Just today I tried to access CDs web site and I got the following: "403 Forbidden... Your client does not have permission to get URL". Has The Computer Dungeon gone "Bye Bye"? If so, that is rather bad news especially since they had such good prices on used Atari ST software. Not long ago I purchased Fate: Gates of Dawn for just $9 (US)... a very good deal for such a cool role-playing game.

I want to get a modem which will decide if an incoming call is voice, fax or data and send/receive a voice message, receive a fax or enable a data login as appropriate.

I think there are 2, a Zyxel and a Sportster VI. Does anyone have any knowledge of these? Anyone got one? Any comments?

Thanks for any help...

Hi saspeyer@reading.ac.uk, on 04 Nov 96 you wrote:

s> This is made up of a program called "TEX". I don't have the author's
s> name with me right now.

Probably Lindner or Strunck.

s> What is this????
s> WHat does it do????
s> Is it shareware, PD etc. or is this a pirate copy???

It's a very fine type-setting program designed by Nicklaus Wirth
(remember him?). Not WYSIWYG like Papyrus etc. The input is an ASCII file
containing your text plus layout/font definitions. This is processed by the
TeX program to produce a .DVI file (a device independent output) which can
then be displayed/printed by special device drivers. There is another
auxilliary program, METAFONT, which generates bit-map fonts as require

Both Lindner and Strunck implementations are PD. If you want to take it
seriously you need a copy of "The TeXBook" by Wirth.

Toshiba has an excellent "mulitmedia" monitor
available. It's a 20" flat screen 181 channel
TV that accepts composite, SVHS, and get this,
RGB from 15khz to 40khz horizontal. In other
words-ST low to Falcon VGA just like an NEC
3D. Works on PC,Macs, Amigas (I first saw the
add in Video Toaster User). With a Catbox the
Jag can run RGB right to the monitor. Screen
size is limited to 640*480, but with some
fudgeing on the scan rates who knows.
Demo's were going for $399.00 at FEDCO this
weekend. It is called the TIMM.

Alternately the Commodore 1084 will work with
an ST and has compostie and SVHS inputs as well.

Mike

Another thing cats (aka meow-meows) do!!! the list now includes:
1) meow
2) poop
3) scrath up curtains and furniture
4) take up too much space

add your own here!!!!!

RCP>
RCP> Sometimes there has to be a '---' at the beginning and a '-----' at the
RCP> end, but sometimes this dosen't work. So what is the right text at the
RCP> beginning and at the end of a MIME file?

Everything before the LAST '---' line at the beginning and everything after the FIRST '---' line at the end should be deleted. If it's split into multiple messages, make sure and delete any extra stuff between the messages, too.

I have a friend who lives some distance away from me, normally I'd be able
to help him out with all his ST woes but that's no longer a reality.

He is getting an internet account with SLIP or PPP (not entirely certain
which one yet) and wants to use his ST for (in order of importance)

1) - Email
2) - Newsgroups
3) - Web Browsing.

Currently he system is

Atari 1040STf
Monochrome Monitor
NO Hard Drive!
2400 baud modem (will be upgrading to 14.4K when he finds one).

He is not all that technically inclined when it comes to computers so what
he wants is just a disk that's all set up, that will autoboot and connect
him up and do all those nasty fiddley bits that are just too much for
him to comprehend right now, and let him access E-mail, Newsgroup, and
a Lynx-like Text based web-browsing (at least until he gets a 14.4K)

I don't have a modem on my ST at the moment, nor do I have a SLIP/PPP account
so I'm afraid I can't set things up on my machine and mail him the disk.
If someone out there can help him out with a disk, or knows where he can
order one, please drop me a line in E-mail with the details and I'll pass
them on to him. Thanks.

>but sometimes this dosen't work. So what is the right text at the beginning and
>at the end of a MIME file?
>
>Ciao
>
I should say, everything that doesn't belong to the mime-file has
to be deleted (header, explaining text, sign-off)
The right text at the beginning should like as the following

Content-Type: image/gif; name="00000002.GIF"
Content-Transfer-Encoding: base64
Content-Disposition: inline; filename="00000002.GIF"
Content-MD5: XWZlRtyIVrkccfVUVyZAZQ==

The ending should like as the following

#part of the base64 file deleted. These are the last 4 lines of the file
3quKxsIzRWaF4NMa46QWvhp6KyWUEmH8lpbCVRGQgRXj09caBDUUci2J2xLXwXC1ruEF0FyZ
StO8VFPG77ird2Ps2EIAUiwgADs=

Hope this help

2443. How to/why use PGP?

Newsgroup: comp.sys.atari.st
Date: 1996-11-10 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32854db0c1477d@sn.no>
Source record: 134297

My offline reader (Okami) has functions for PGP installed, and I've set the paths correctly, but I'm not sure how I should use it and why....

I understand this much; that it's a sort of encryption which makes the email messages unreadable for everyone but the person who has the correct code/key to "open" it, right?

I'm not interested in the technical stuff about how a PGP key is made etc. but rather how it should be used... a short, easy--to-understand "intro" if you may.
I've tried using it with the mailer, but it asks for a code, and I don't even know what/where I should enter it, if it's the same one for all teh mails, if I have to make a unique code for each mail or whatever.

From: dogmeat@netcom.com
Message-ID: <dogmeatE0nE8E.Cpz@netcom.com>
Source record: 134301

Hi All!

Anyone care to answer a bequiling question, or report similar problems?

I recently purchased both NVDI 3 and AtariWORKS V1.2. After
installing both on my TT it seems that the driver insists on printing
"CJ" in the top left hand corner of each page. GRRR! and otherwise NVDI
works great! and I love AW - so much easier to use than That's Write!.

The only thing I can see that is weird about the NVDI setup is
that the printer driver is listed in the PAGE SETUP menu as PINP.S.SYS.

I have a CANON BJ200ex printer and printing under ATARI
SpeedoGDOS 4 works fine...

Thanx!

Source record: 134303

Daniel Fangmann <dfangmann@worldnet.att.net> wrote in article
Following Atari hardware for sale:

Atari Tower Power!!

All equipment installed into 'new' tower. All devices are connected to
your Atari Computer through the included 'LINK 2' ICD device. No more
compatibility problems:
Here's whats inside:

85 meg Seagate hard drive/Sony 541-CDU CD drive/ICD 155meg tape backup
drive
540 meg 'brand new' "Fujitsu" hard drive & 2 50 meg Seagate hard drives
+ ICD Link 2 and cable.

Tower was put togeather by Alex at ATY Computers on 9/30/96. All is ready
to go, software and instructions included. This is once sweet setup for
an
Atari Computer.
Link 2 connects to back of tower, one cable to your ST/STE/MEGA/TT or
Falcon and your ready to go. All devices are SCSI ,connector on back of
tower is the 50 pin Centronics. I was planning to hook the tower up to my
MEGA STE but have decided to sell due to a change in plan, i.e.,
Pentium/Gemulator taking up my time. Anyway this is a great setup and
would make any Atari user happy with total hard disk space at 725 megs. 5
extra 155 meg backup tapes included.

Asking price for tower is $800. Tower plus MEGA STE w/50meg internal HD
and 144meg high density floppy drive...$1100.

Also for-sale...

SC1224 monitors: 'Refurbished'...$65ea. 'Used'...$50ea.
1040 STF/1meg/used/mouse, in good shape & clean...$75 ($65 w/o Atari
Mouse)
PCM124 Atari PC Monitor: 'Refurbished'-9-pin connector...$70ea.

Yes fine, but what is the text which has do delete?

Sometimes there has to be a '---' at the beginning and a '-----' at the end,
but sometimes this dosen't work. So what is the right text at the beginning and
at the end of a MIME file?

Ciao

> have a source for hardware and peripherals but hey.....
> that was 3 or 4 years ago!

Just replace the flopy with a HD diskdrive. Open your computer,
disconnect the old drive, connect the new drive (in most cases the connector
must be fitted upside down, in that case I advise you to separate the wires
leading to the connector over some distance so you can twist the cable easily),
modify the case so the button of the drive is accesible and close the computer.

The drive should work just like a normal DD drive. You won't be able to read HD
disks formatted on HIGH density though, that needs a bigger hardware
modification. The computer will not be damaged by putting the connector upside
down on the drive. In that case the desktop will come up and the drive will keep
on spinning, there won't be any mocemet of the drive heads.

Succes, Hans Wessels

Gary Priest (gary@the-gap.demon.co.uk) wrote:

>Has anyone managed to get the new jpeg ovl (that uses the Brainstorm DSP
>decoder) to work?

It works perferctly for me.

>The JPEGD program itself seems to lock up an awful lot under Magic4/5 and it
>just hangs. But even when it doesn't hang. I just get a white rectangle
>instead of an image. It's not memory related (before anyone suggests that)

The "white rectangle" problem has nothing to do with the jpeg-decoder,
it's a problem with CAB. I've encountered this problem with some
version of CAB, v1.4x didn't have this but 1.5 does. The problem seems
to go away if you quit CAB and start it again.

>I have noticed (when using jpegd with Imagecopy etc) that it refuses to load
>some jpegs and that is to do with the fact I have PowerUp2 fitted. But the
>new cab ovl doesn't work with or without it!

I have a Speed Resolution Card (18/36Mhz) and a 50MHz DSP-clock, the
jpeg-decoder works fine here. The problem is usually the jpeg itself,
if you try to use a more tolerant viewer the picture show up, but
parts of it are distorted beyond recognition.

You need ESScode 6.4 - it handles several different encoding/decoding
methods. UUcode is easy; Mime/Base64 requires editingthe file slightly to
remove anything before the first cutline, but ESScode handles the decoding
quite well.

2469. Re: Problem running BIGDOS 06 under KAOS 1.4.2

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: Hans Wessels <mr_ni@mbh.org>
Message-ID: <847750202@p24.f101.n323.z205.mbh.org>
Source record: 134123

> From: jmpatat@asi.fr
>
> I Already heard about KAOS(Long Time ago). Is it the tos 1.2 with
> modifications (speed and bugs corrections)?

No, as far as I know it's a heavy modified TOS 1.4 (1.04 according the current numbering scheme). At some points it quite optimized, esp. VDI and disk routines (compiling a big C project on a 16MHz ST is over 4 times faster as the same project on a Falcon, same SCSI harddisk was used).

I realy love the push back button in the right corner of a window. It pushes a window to the back of the window stack. Very usefull when you have opened mutiple windows in your editor. You can make them all full size. Switching to the next window is simply a click on the push back button. I am realy missing the button on other windowing systems.

> If so, were can I find it?

I found it on a local BBS. I am not sure if it is available on the internet. Because it is a patched TOS 1.04 it just might be considered as illegal software. The Magic OS for the Atari is close family of KAOS, it has got a lot of the nice KAOS features.

In article <51347326_000003_OASIS_NEWS@the-gap.demon.co.uk>
gary@the-gap.demon.co.uk (Gary Priest) said:-

>Also, does anyone know which version of jpegd is the latest and/or most
>reliable?

I'm not sure it's the latest, but the latest (and most reliable) I
have has no version number: it has 9150 bytes long and is compiled on 6
Dec 1994. I have also 3 other older versions, 0.81ï¿½, 0.90ï¿½ and 0.93ï¿½.
These three are 'ï¿½' betas...

>Is it just me or does anyone else find jpegd to be very unreliable

I don't use it anymore since JPEGDSP 2.22 has his own routines, but
used it before without problems. I hope I remember correctly, because I
guess I'll use it now with CAB!

Bye! Bruno.

>It's a very fine type-setting program designed by Nicklaus Wirth
>(remember him?).

TeX was designed and implemented by Donald Knuth. The orginal program was written in the language Pascal, which was designed and implemented by Nicklaus Wirth. Since C is now a more widely available language, some people developed programs that can do a reasonable job of converting Pascal programs into C. In particular, these programs can correctly convert the TeX source code. As a result, most people now run C implementations of TeX.

TeX is available both with public domain and with commerical versions. Some of Knuth's students developed some of the first commerical versions. They needed an income where as Knuth figured he would get adequate income from his books about TeX.

2475. STik/CAB on Magic Mac Question

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: Reg Loeppky <a50146w8@awnet.com>
Message-ID: <3287436E.79E3@awnet.com>
Source record: 134168

I have heard that it IS possible to use STik/CAB with Magic Mac.

The docs on MagicMac are skimpy at best. I printed out and installed all the STik/CAB and other STik using programs using WWW Installer. I got an "installation successful" message on each one of them.

When I used the Multitasking option in the installer I got STIK.PRG in my INTERNET folder on Drive E. STIKTSR.PRG was placed in my auto folder (it loads successfully and after my HSMODA files which also load correctly). The STIK_DIR.DAT directed STIK to my E:\INTERNET folder.

However there was no STIK.ACC on my boot drive so I had no way of starting or controlling STIK to dial.

I then copied and renamed the STIK.PRG to my boot drive as STIK.ACC. Then I restarted Magic Mac. Now STIK.ACC appears in my Desk Accessory list but when I select it I get this error message:

STIK Not Initialized
Can't Load Config

I can't find any answers in the Magic Mac manual.

If you have got it to run successfully on Magic Mac could anyone tell me how I overcome this?

It probably is something really obvious but after trying for hours to figure this out I am stumped.

Any help would be greatly appreciated.

Thank You
Reg Loeppky

2476. Tex?

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: John.Kormylo@7861.conchbbs.com
Message-ID: <6a8_9611111029@conchbbs.com>
Source record: 134169

I thought TeX was by Donald Knuth, at least in the original WEB language version. I know that he is the author of "The TeXbook," cause I have a copy right in front of me.

This was mechanically translated to Pascal, which was then mechanically translated into C. Particular pd versions were modified to run on various platforms (changing '\' to '/' and back again, adding Unix I/O function emulators, changing the names of system include files, and [UGH] adding near and far pointers).

Most source code versions I've seen consist of a giant kludge of #ifdef statements, making the code virtually unreadable.

To call itself TeX, a version must pass a series of tests, which unfortunately includes its awful Unix style user interface.

While TeX is the ONLY way to fly for technical papers (equations) or to vertically justify a page, I would never use it for a newsletter or other DTP application. If you are too cheap to spend $39 for PageStream, then you deserve to use TeX.

2477. Forecast problems (WAS Re: New Stik releases.)

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: Doug Kendall <dkendall@facstaff.wisc.edu>
Message-ID: <3287747E.7475@facstaff.wisc.edu>
Source record: 134170

Yes, how about Forecast? I haven't even gotten to work with STiK 1.08.
It just gives me a time out message very quickly, even though the modem
is clearly sending and receiving something for several seconds after the
message appears. This while all the other applications (CAB, Antmail,
NEWSie, Finger) seem to working pretty well.

2478. Using Stalker to run CAB???? (WAS Re: CAB on Falcon? Yes it works for me :))

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: Doug Kendall <dkendall@facstaff.wisc.edu>
Message-ID: <32877330.1993@facstaff.wisc.edu>
Source record: 134171

OK, I'll bite since no one else has: can you really run CAB, Antmail and the other Atari internet applications under Stalker rather than STiK??? How does Stalker make a workable SLIP connection? I have used ST-TERM to connect to my server, but just to get the proper login dialog for the STiK config. files. When I typed slip, the server didn't complain, but all keyboard input was disabled (or made invisible). Is this a trick that only Stalker can do? Or is it possible to do it with other comms programs as well? Or does this have something to do with using Geneva or MagiC?

Inquiring minds want to know.

2479. How to set up "killfile" in TIN?

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <328765a039c3d2@sn.no>
Source record: 134172

Yesterday the wildest thing happened- there were over 7000 messages to be downloaded from this group!!! (I use an offline reader).

Either the group has been completely messed up somehow (I remember the group being "cancelled" for a lot of people last week, so perhaps this is just a continuation of those problems...).

But the other thing is that there's this large amount of spamming which resulted after those "meow..." postings came up (by the way, have the people being responsible for it been caught yet?).

That's why I'd really like to set up a "killfile" to try and stop getting my offliner filled up with junk each time I download.
I use "Tin" online, which shares the same setup files as my offliner does, so how does one set the "killfile" up? (I can't find any proper documentation anywhere).

Is there a way I can filter out any messages containing "Meow" or "meow" in the subject field?

Is the terminal program "Connect" still being supported and developed?

Last I heard, version 2.60 was in the works, but I haven't heard anything
since. I've tried to get in touch with the author, but with no luck.
I've got some ideas for improvements, notification about bugs etc.
and I'd really like these to be considered for the next version if there
is going to be any.

I get the same problem. But, these messages are not worth reading,
and you can still mark them as read without actually viewing the
contents. Just hit the down arrow when finished reading all the
other messages and zoom through them. It will only crash Netscape
if it actually tries to display it. Hope this helps.

PGP ("Pretty Good Privacy") is a military-grade encryption program that uses
a two-part key; the owner of the key publishes one part, which you use to
encrypt messages /to/ him. He uses the other (secret) part to decrypt those
messages. Without the secret key, it is possible to decrypt a PGP-encoded
message using the brute force approach - in about 5000 years.

In order to send someone a PGP-encoded message, you must have a copy of
their public key. Such keys may be obtained from public keyservers, via
direct email from the key owner, or on a floppy from the owner.
Additionally, there are a couple of PGP-oriented newsgroups, and even a
Fidonet PGP key drop echo.

PPG is available for the PC, Mac, Atari, Amiga, DEC, and many other
platforms. Source code is freely available; Binaries are also available,
but compiling it yourself if you can is recommended. You can never bee
/too/ paranoid in a world that contains the (remnants of the) KGB, the CIA,
Saddam Hussein, and Peter Sinclaptrap-Dog.

That was probably due to the second 5000+ part meow message hitting your
ISP's site!

>Either the group has been completely messed up somehow (I remember the
>group being "cancelled" for a lot of people last week, so perhaps this is
>just a continuation of those problems...).

Not so much messed up as messed with!

>But the other thing is that there's this large amount of spamming which
>resulted after those "meow..." postings came up (by the way, have the
>people being responsible for it been caught yet?).
>
>That's why I'd really like to set up a "killfile" to try and stop getting
>my offliner filled up with junk each time I download.
>I use "Tin" online, which shares the same setup files as my offliner
>does, so how does one set the "killfile" up? (I can't find any proper
>documentation anywhere).

In the version of TIN that I use here on concentric.net, the command is
control K that's a capital K! Should bring up a form, it helps if you are
in the offending message that you want to kill hen you use this command!

>
>Is there a way I can filter out any messages containing "Meow" or "meow" in
>the subject field?

Haven't found a way to make it that general in the subject field, but you
can kill messages with meow in the body text!

OK. friends, there is a misunderstanding!!

1)I use Stalker to dial up and connect to my server . After I do all the work I need to do , then I switch to SLIP by pressing the keys CONTROL/UNDO.

2) Then I type the last three digits of the IP number to Stik which was already loaded but NOT active . Stik saves the IP numbers to a file. I write protected this file so that I have to type only the last three digits which are the only ones that change on my server , the others are always the same. So I write protected the Stik file named CONFIG.SAV

3) After I type the numbers Stik/CAB work the usual way.

I would like to mention that I use jar10.prg on my auto folder instead of STIK driver. Because that way I can load Stik.ACC at any time without having to initialize anything.

I use Stalker because that way I can connect to the NET and use lynx etc. and then switch to SLIP when I need to without having to log off.

Also Stalker is able to dial in the background.

I hope this is clear this time :)

I DO USE STIK and thank every one for bringing these fine programs to the ST's, TT's and Falcons.

ANT MAIL, CAB. STIK, Telnet, Newsie.

2493. Small Atari auction, update #3

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: smedley@gte.net
Message-ID: <5684g3$m0v@news2.gte.net>
Source record: 134186
Cross-posted to: comp.sys.atari.st,rec.games.video.atari

Well, I am a pack rat - especially when it comes to video game stuff
and computer equipment. So every now and then I take a good hard look
at my collection and get rid of what I don't need. Usually it will be
a piece of hardware I no longer use. Or my wife just wants it out.
Well, for what ever reason, here are a few items I have for sale.

Auction rules -

Bids will be accepted until Saturday, November 16th. At that point the
auction will go to a "going once, going twice" format, with updates
sent by e-mail to all participants. The auction will end NO LATER THAN
Thursday, November 21st (Turkey Day). If there are still competing
bids for an item when I check my e-mail that morning, the highest
bidder in my mail box gets it. Bid increments are a $1 minimum.

Shipping to be paid by buyer. All items shipped COD.
(I will pay COD charge, since I insist on shipping that way.)

-=-

Item #1 - Atari TT030 workstation

4 megs ST RAM
TOS 3.06 ROMs (USA)
720K floppy drive
120 meg hard drive
Long-range printer port modification
Revision H motherboard (will accept CaTTamaran 48Mhz upgrade)
Includes AtariWorks, Civilization, and a few misc. games

This system was formerly used to control an automatic embroidery
machine, which is why the transmission distance on the printer port
was boosted (sorry, but I don't know what the actual range is). The
floppy drive is actually a 1.44 meg mechanism, the system lacks the
Ajax driver chip required to do 1.44 meg read/write operations. (BTW -
Toad sells these chips for $40.) Keyboard & mouse included. Has been
packed away in my closet for some time, so clock battery is probably
dead.

Current bid: $200 by ghaddrel

CLARIFICATION - I cannot verify if the floppy is really a 1.44 meg
mechanism. That is merely what I was told when I bought it. I do
have a spare 1.44 meg floppy drive that I will include at no extra
charge, just in case the drive turns out to be 720K after all.

Do me a favor.. Either give your falcon to me.. or get NVDI 3 or 4
and stop worrying about GDOS.. it severely slows down your system
where as NVDI improves speed. Also get Magic.. You will love it.
I get the impression you are one of those people that have a great
computer and crappy software for it. (by that list of auto folder
programs :)) so get NVDI and everything will just work

Hi Hallvard,

PGP (= Pretty Good Privacy) works with a dual key combination: a private
and a public key. You have to give the public key to all your friends and
other persons you do business (or whatever) with.

How do you use it? If you want to send a confidential email to some-one
you need two keys: the recipient's public key and your secret or private
key. You first encrypt the email with your private key and then with
his/her public key. The recipient decrypts your email in the reverse
order: [s]he uses his/her private key first and your public key next.
In this scheme the both of you need to have each other's private key.
You can also use one key, in this case the SENDER needs the recipient's
private key. In your case the code your mailer asked is the recipient's
private key, I think :-|.

Another functionality PGP offers is the possibility to *sign* messages.
In this case the messages can be read by anyone, but contain a signature
which garantees that the message is written by you and not altered by
someone else. All the reader has to do is to check the message with YOUR
public key. See the documentation on PGP for more info on this subject.

Strange indeed. I've tried Selectric v1.10 (not registrated) and I
must say that Selectric doesn't support long filenames.
The only file selectors that support long names are AFAIK Boxkite,
Freedom and N_FSEL (can only be used with N.AES).

Hope this will help,
Martin

AV start allows one program to start another program and it pass it parameters. e.g. your text editor could start your compiler giving it the name of the program you are currently editing. I'm sure there is a lot more to the protocol than this. Perhaps others here can enlighten us.

I'm afraid that Al Horton and the Computer Dungeon are indeed, gone.
Al's place was one of the best for finding great used deals. He also
brought in new stuff from Europe, and he even set up registrations
for shareware...Unfortunately, something happened that was connected
with his family, and would demand all of his time...so reluctantly,
(very!) he closed The Computer Dungeons doors. One of the last things
he said, though, was that he would always own an Atari, and be an
Atari advocate...Personally, I'm hoping his family problems will work
themselves out and that we may yet see a re-incarnation of the Dungeon.

Well, I can hope... :)

It's the same here, except it's just shift-k. Then press return for the
first few fields, when you get to the yes/no boxes press space to toggle
them. The first two toggle fields let you kill a particular message or a
particular person. I am using tin 1.3 unoff BETA release 960917.

AFAIK, the original GDOS (1.1) doesn't work on the Falcon (not sure about GPLUS - try it!). You should have got a version of Speedo GDOS with your Falcon (probably 4.x). Try this though again I think Speedo fonts won't work with Easy Text. It's worth a try though, you can't do any harm.

Regards
Martyn

>gif one too)?

Yes, I have problems with the new jpeg ovl.
I've got the Brainstorm DSP Decoder since many months, and it always works fine! If you don't believe me, try it with JPEG.ACC, and you'll see it's true. (JPEG.ACC has some bugs, but it has only been created to test the DSP decoder!)

In fact, I think that the problem comes with CAB_JPEG.OVL!!
When I use it, the jpeg pictures are badly printed. The last line seems to be duplicated three or four times, so the picture has too many lines (than expected).

I hardly waiting for a new version of CAB_JPEG.OVL, as the Brainstorm DSP decoder works good.

All the best,

Jeremy.

Hi,

Is this happening only to me or is this message causing problems
with all other people with Netscape 3.0 Gold? I've tried to read this
message many times with Netscape 3.0 and it always caused a
failure...Luckily I also have a 2.01 version, which seems to work fine.

>just replace the ST ROMs with the Gemulator ones?
>
>

Yes! You might have to change a set of jumpers on your STe's
motherboard, but thats about it...oh you have to line up the
notchches to get your orientation right, and match up the "hi"
and "lo" chips but its as easy as falling off a log, really!

You'll love TOS 2.06! :)

2511. PPP disconnection

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: p-abel@imaginet.fr
Message-ID: <847802478_OASIS_@imaginet.fr>
Source record: 134204

I still have a little problem with PPP connection (PPPKIT in fact) :
from time to time, during Web browsing the modem hang on (is it the right word
?), as it had loss the carrier or something else. Let me say one more again that
the PPP kit is based on :

Mint 1.12.5
MintNet 1.0 pl 1
pppd 2.2.0
Cab 1.5
Cab_for_Mintnet 1.77

I use a Motorola v32bis v42i with a Falcon under TOS 4.02.

I wonder if this problem only appear with MintNet 0.90 ...

Do there is a solution to inhibe the Carrier detection ?

From: Matthew Montfort <info@ancient-future.com>
Message-ID: <32882B28.D75@ancient-future.com>
Source record: 134205

My 1040 STe has a power supply problem which would cost about $100 to fix, so I would like to buy a working one instead for less. Will consider Falcon, TT, Mega STe, or 1040 Ste with 4 meg. Also could use monitor. Does anyone have something in their closet they would like to get rid of real cheap?

I live in the SF Bay Area.

2518. Annual TAF Flea Market

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: hcarson@io.org
Message-ID: <5666s1$o61@news1.io.org>
Source record: 134211

The Toronto Atari Federation Annual Flea Market
will be held in Toronto on Wednesday evening,
November 20th, 1996 at Memorial Hall, North York
City Centre. Flea Market hours are from 6:30pm
until 11:00pm. Don't be late! The City Centre is
located at 5110 Yonge St. at Parkhome Ave, 3 lights
north of Sheppard Ave.

The annual TAF Flea Market is one of the largest events
of its kind in the world. It's also the best chance to
find and purchase a huge range of software and
hardware, rare items and an enormous array of parts.

Admission is $3.00 at the door.

For those wishing to book a table, send e-mail to TAF at:
'taf@io.org' or fax to: 905-427-9703

TAF members are entitled to a half-table at no charge; all
others pay $10 at the door.

Book now - there are only 10 tables left!

Can you write the system-level drivers needed to use the parallel port? If
not, don't waste your money. Get the SCSI version of the drive and a SCSI
card for your PC.

Message-ID: <32874561.27F2@awnet.com>
Source record: 134215

I too am a MagicMac user trying to get STik/CAB working. I would
imagine that when STik is finally revised to provide PPP support it will
work for us MagicMac users too. I would prefer to use the Atari
internet apps over the memory hungry Mac apps as well. As for OpenDoc
support that would be neat but I think the basics have to be mastered
first. (PPP, Netscape compliant, etc)

Right now I am trying to figure out how to install STik on Magic Mac.
It is not as simple as just putting the STik.ACC in the root directory.

I'm getting this error message when I select the STik.ACC:

STIK Not Initialized
Can't Load Config

Brett,

I used to have a SLIPP connection using STiK/CAB here in San Francisco.
My ISP is Best Internet Communications Inc. in Mt. View. I made it clear
to them that I needed pure unadulterated SLIP and not CSLIP or PPP. I
have since switched to a PC and PPP but continue to use Best Internet.
They are a little more expensive than other ISPs but they give you more
Web page storage and stuff like that.

If you are interested you can give them a call at: (415)964-2378 or
(415)934-2487.

Later,
Sam

Source record: 134255
Cross-posted to: comp.sys.atari.st,news.admin.net-abuse.misc

As you can see, the meow bombeers struck again. Actually, I think it's just one particular f*ckhead injecting his crap through an open server in Austria - I've notified the postmaster there.

Netizens in c.s.a.s are advised to read the path line (in the meow cross-posts, not this one!) and complain to each and every postmaster in that line if they decide to do something at all.

Followups set to news.admin.net-abuse.misc - if you want to dfollow the conversation, you'll have to subscribe and read the thread there.

I'm afraid there are no AES calls for copy/move/delete... the
AES is for primitives, like drag, click, select menu, open window
etc.

>Does anyone have a fuller listing of AES call numbers and their
>meanings?

Check out the Atari Compendium for a full list...

Yup. You realy expect to get a decent manual when you pay that amount of money,
don't you?

One of the reasons why you buy an orginal is that you should get the some
decent manuals, like the one you get with Lattice C. They are great and well worth
the price alone, atleast almost alone.. :-)

2532. GDOS

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: slc.dennis.bishop@muskrat.com
Message-ID: <961111000010922976@muskrat.com>
Source record: 134259

I tried to install the Easy Text Pro DTP package found on the 2 Atari ST Review cover disks (issue #33) on my Falcon030. Everything went ok until I rebooted. Everything loaded and worked until it hit GDOS... The message Atari GDOS 1.1 loaded in RAM was on the screen, but that's as far as it went, everything was locked up. This is my setup.

Falcon030 4megs syquest 44meg drive

In auto folder: Fastprint.prg, JEPG.prg, Sam.dat, sam.prg, UIS-III.prg.(I removed GDOS)

I use Atari HD for my bootup.

Does GDOS have to be 1st? Can I use GPLUS+(it's on the drive when I got it)?

Atari Falcon030 for sale. 4 meg memory. 65 meg internal IDE hard drive
(supplied full of software). FPU fitted. Onboard TOS is version 4.04.
300 pounds or nearest offer.

If interested, mail me on ied2@recursiv.demon.co.uk

I'm advertising this on behalf of a friend who doesn't have net access, so
there'll be a small delay before I can get back to you if you make an offer, as
I'll have to inform the friend and get his answer.

2534. Crossposts to c.s.a.s from dai@jaubrey.demon.co.uk

Newsgroup: comp.sys.atari.st
Date: 1996-11-11 00:00:00 UTC
From: jaubrey@jaubrey.demon.co.uk
Message-ID: <847807312_OASIS_@jaubrey.demon.co.uk>
Source record: 134261

I am very sorry about the crossposts, Dai, a co-user of my account is the one joined to alt.nuke.the.USA, he is soley responsible for the crossposts. I have told him in no uncertain terms that he is not to do it or I'll stop him from useing this system. For the record I think a.n.t.U is a waste of diskspace, I never get involved in debates running there. I am sorry to anyone here in c.s.a.s who, quite rightly so gets pissed off. I hope we can now put the matter to rest.

Regards,

James

Sounds exactly like it should be and what you would expect to get when you a
application that costs as much as MagiC. I must say that I was very disapointed
when I got MagiC because the manual was totaly crap. Even Atari's manuals was
lightyears ahead of MagiC's and that says it all...

Sure, but I still find the manuals that come with Lattice C 5.01 to be the
best. Easy to handle and very easy to find what your are looking for.

The latest from HiSoft is another story though....

The Compendium is good, but I wouldn't like to be without my Lattice C
manuals!

2540. Can't even get STIK to dial!

Newsgroup: comp.sys.atari.st
Date: 1996-11-12 00:00:00 UTC
From: dhbutler@stat.ohio-state.edu
Message-ID: <56aj6b$opq@osustat.mps.ohio-state.edu>
Source record: 134067

OK, I can't even get STIK to dial my modem! All the other telecom software I have does fine. Anyone else had a similar problem? All the parameters seem to be fine, I even set the speed down to 9600 in case STIK was expecting a slower speed. I'm running on a C-labs Falcon with 14mb. I'm familiar with both TCP/IP SLIP and PPP configurations (I even got my Newton to work recently, how cool!-), but I absolutely can't figure out what the h*ll could make STIK fail to dial at all. Init strings are, of course, in place. What obvious blunder am I making???????

Thanks,

David Butler

What do you mean with normal file selector? All the selectors I
know about do support long filenames the way you see it (the only
selector I haven't test is the TOS selector). What I don't
understand is what you mean with "~1". If I view my minixfs
partition with Selectric the only thing I see are filenames
fransformated to the normal 8+3 format. And this can be very
annoying if there are two (or more) almost the same filenames in
the same directory.
e.g. martin-14-8-96.txt
martin-14-9-96.txt
Selectric displays both files as martin-1.txt
Is this supporting long filenames? I think not. If I say "support
long filenames" then I mean that the selector shows the files
like they are on my minixfs partition.

I'm not sure what you mean with "the modem hang on" but I do have
problems with certain URL's. Trying to view then give me after a while
a "connection to host" and that's it. I can wait for ages but nothing
happens.
Is this the problem you have?

If you have already put stiktsr.prg in the autofolder and it still says
cant load config then you may have to edit the stikdir.dat file to point
to the right directory!

Source record: 134076

```
================================================================================
SILIconvention'97 - Germany//Bremen - http://www.siliconvention.com
OFFICIAL INFO TEXTFILE v1.0
================================================================================

The Organizers of the FRIED BITS I-III, BB SYMPOSIUM'96, YELLING JAM PARTY
and INTERCON'96 Party bring you the biggest computerparty at easter 1997.

--------------------------------------------------------------------------

The Organizers are: Absence (Atari + PC), ADM (Atari), Fairlight (C64),
Icebird (Acorn), Inter (Atari), Oxyron (Amiga + C64),
Plush (C64), Talent (C64), TSCC (Atari)

Where and When?!
--------------------------------------------------------------------------

Buergerhaus Obervieland
Alfred-Faust-Str.6
28277 Bremen//Germany

Begin: 28.03.1997 12:00 CET
End: 31.03.1997 12:00 CET

All Systems are welcome! That means we have lots of Competitions for the
following computers: ACORN, AMIGA, ATARI, C64, PC.

Entrance Fee:
--------------------------------------------------------------------------
The entrance fee ticket will cost you 30 DM. Please pay in DM only!
If you want to reserve your coming, you had to pay only 20 DM for each
member. More informations are on our homepage or dial this number:
+0049-421-8498236. From 19:00 to 23:00.

How to reach the SILIconvention'97?!
--------------------------------------------------------------------------
by car: Drive to Bremen over the highway and exit at
"Bremen - Brinkum". Then follow the signs that will show
you the way to SILIconvention'97 Party. If you are in
trouble by finding the partyplace, just call this number:
8498329.

by train: Get out at "Bremen Hbf" (main station) and take the tram
number 1 way "Arsten" and get out at "Kattenturm - MITTE"
and follow the signs... If you are arrived after 23:15
then call this number: 8498329.
```

by plane: When you have reached the Airport Bremen call this
number: 8498329. Please give us the number of people who
arrived - thanx!

There will be the following competitions on the SILIconvention'97
---

1) AMIGA Demo Competition
2) C64 Demo Competition
3) PC Demo Competition
4) ATARI Falcon Demo Competition
5) ACORN Risc PC Competition

6) AMIGA 40Kb Intro Competition
7) ATARI Falcon 96Ktro Competition
8) PC 64Kb Intro Competition
9) ACORN Intro Competition

10) Coding Competition (all systems)

11) Grafik Competition
12) C64 Grafik Competition
13) Render Competition

14) 4 Channel Protracker Competition
15) Multichannel Music Competition
16) C64 Music Competition

17) Wild Competition
18) Surprise Competition
19) Netwave Competition
20) Fake Demo Competition

Many competitions - lots of prices. Our sponsors will spend lots of
prices and money to this party. Be sure!

Check out the best partyplace you've ever been. What about a big building
complex with showers, kitchens, lots of party halls and rooms and a nice
presentation hall with the greatest video beam and brainblasting sound
equipment!

Yeah! On the SILIconvention'97 is place for about 2.000 people including
their equipment plus seperate sleeping rooms.

There is a seperate disco-room on the partyplace. There will be a great
RAVE-Act and SID-Act during the SILIconvention'97! Entrance for party
guests is free. Have a nice Rave?!

You wanna Party T-Shirt's - You gotta Party T-Shirt's!! The best T-Shirt
printing techniques you've ever seen. The Shirts will be FRUIT OF THE LOOM
T-Shirt's.

Please note this: - smoking is allowed. In some rooms, smoking is
absolutly forbidden (sleeping romms a.e.)

- alcohol is allowed. If somebody makes trouble
he will be kicked out.

- please don't park your car at the entrance door

2550. [FS] Various Atari...

Newsgroup: comp.sys.atari.st
Date: 1996-11-12 00:00:00 UTC
From: Jeremy <jeremyc@micron.net>
Message-ID: <3288B8B5.5016@micron.net>
Source record: 134077

I am having my "Atari Clearance Sale" - Although I'd prefer to keep it local (Boise area, maybe Salt Lake City or somewhere in between) I am posting here - shipping negotiable if we make the right deal. Here's what I have :

- Atari 520 ST with 1mb RAM
- Two Atari SC1224 color monitors
- Atari Jaguar - 2 joysticks
Tempest 2000, alien vs. predator, Zool 2, Trevor McFur, Cybermorph
- ICD Catbox with SC1224 monitor adaptor
- Monitor Master switch - hook up multisync/color/mono monitors to ST, includes drive B/C switch, composite video and audio out.

I'd prefer to sell the Jag system as a whole with the console, games, catbox, and an SC1224 monitor... make an offer if you're interested in the whole setup.

Leave mail to jeremyc@micron.net if interested.
Thanks.
jeremy

2553. REPOST: EMP/ECP Cancelled ("My College Bowl Is Filled With Cat Food") @@NCM

Newsgroup: comp.sys.atari.st
Date: 1996-11-12 00:00:00 UTC
From: Stan Kalisch III <sjkiii@crl.com>
Message-ID: <repost1-7266.961105093120.10528A@crl.crl.com>
Source record: 134080
Cross-posted to: alt.college.college-bowl,alt.fan.karl-malden.nose,comp.sys.atari.st,rec.music.rem

Original article cancelled by anonymous, rogue canceller. Yes, I *do*
watch for cancels in control. :-)

-----BEGIN PGP SIGNED MESSAGE-----

It isn't often that spammers announce in advance of spamming that they
intend to spam, but here that's exactly the case.

This is part of the, by now (I hope), well-known "meow" spamming.
Note that only large spams or sections of spams are cancelled out of
news.admin.net-abuse.misc, and that these cancelled articles will
probably be reposted in that group by the program Dave the Resurrector.

The articles are effectively cancelled out of all other listed
newsgroups. For a limited time, the cancelled articles can be viewed
exactly as they appeared on Altavista (http://www.altavista.com) at
the URL http://www.crl.com/~sjkiii/cancellations/articles .

I also make the note that over half these articles have almost
certainly been forged with the address mlb61@bu.edu, one Matthew L.
Bruce. As of yesterday, the *real* Matthew L. Bruce had probably not
posted to Usenet in weeks.

13 articles have been cancelled in 41 groups. The Breidbart Index for
this portion of spam is 21.65 .

Followups to this report should only be made to
news.admin.net-abuse.misc .

Vielmals Gerd. Your suggestion might help. Magic Mac is a little
different from your typical Atari TOS in that copying files out and in
again in order has no affect. The Mac will only read in files in
reverse alphabetical order. That means a file starting with z gets
loaded before a file that starts with Y. I only learned that (or
relearned it the hard way) recently. I will rename the STikTSR.PRG as
ZSTIKTSR.PRG to make it the first program to load.

auf Wiedersehen...

MOV files are Apple QuickTime movies. Mplayer will play them even on a
plain old ST, although of course it's better in higer rez and full color on
a TT or Falcon.

Take a look at the 2 sections of docs for PGP - it's command-line-oriented,
so you will need to start it as a TTP (or GTP if you feel happier with that
<G>). I seem to recall the first useful command was "keygen" or kg" or
something of that sort - you have to create a keyring before you can do
anything else.

Really, this sort of thing should be explored in the PGP newsgroups - it's
way out of normal "atari" territory and much more general (and since I
haven't used PGP for almost a year, though I /should/, I can't talk about it
as intelligently as I'd like).

ESQ 1 is in mint condition(sequencer built in)--->$ 315.00

SPECS: Multitimbral (able to play more than one sound at the same time),
Sequencer built in(2400 notes, 30 different sequences); Stereo;
Full size keys, 5 octaves, velocity sensitive; 128 sounds
available; Midi IN/out. Pedal CV. sequencer, foot switch, tape
in/out connections. Pitch and modulation wheels on board. I have
the original manual.

The Atari is 1MB ram (enough for all sequencer programs, even Cubase; lots
of music softwr. available on the Net) Monitors: color and B/N. (yes, the
2 types) ---> $100.00

Buyer pays shipping. I have a *.JPG available upon request; please
mail directly to fpinto@byu.edu for additional specs/questions.

Best Regards: -Phil. (I'm in UTah, shippping UPS for synth won't be over
$20).

Greetings,

Looking for a guru to help me unravel a mystery. I used to have a protar 40 hooked up to my mega ste. Worked just dandy. I used it mostly for special programs and as a boot drive for the ATonce emulator. It never really worked right and I put the protar away and used the atari internal 40 mb disk. Now I want to resurrect it and the internal drive in about 99.9% of my tries won't find the protar and when it does, the ATonce starat doesn't find it as a boot drive.

It's probably just something dumb, but I don't know how to fix it. Any suggestions?

Thanks for your help,

Jon Rogers

[....]

Thanks for that explanation!
Do you think you could give me a short step-by-step guide on how to get
started using it? I'm still quite a bit confused :-(

I've got several of the PGP programs for the ST: pgp
pgp shell
easy-pgp

But since Okami (my offline news/mail-reader) has options for PGP I'm going
to use that. I've set up paths to the "pgp.ttp" program, so Okami probably
works like a shell for it.
I guess I can use the "easy pgp" to set everything up regarding keys etc.
It's just that I don't know where to start, and reading through an xx-page
manual isn't exactly tempting, so a short guide would be nice.. ;-)

Hi Daniel, on 07 Nov 96 you wrote: ...respect, brethren

d>
d> Can anyone tell me if Dungeon Master and/or Chaos Strikes Back runs on
d> the Falcon030? Is Backward required?

Referring back to the Falcon list of games compiled by Heiko Hartmann, I get
the following info:

ST: Status. "PD" - Public Domain, Freeware, Postcardware etc.
"SH" - Shareware, Dongleware, Poolware etc.
"C1" - Commercial, newer games (full-prize).
"C2" - Commercial, older games (some of them reappeared in
Compilations, others are available as low-budget games,
many of them aren't available any more).

C: Compatiblity. "-" - The game does never run on F030.
"+" - The game runs with ST-Emulators like Backward etc.
"!" - The game runs without modifications (in ST-Low)!
Falcon games and some GEM based games may run in higher
resolutions.
An additional "^" means: Game does also run in higher
resolutions than ST-Low or ST-High!

MHZ: Mhz-rate of 68030 (and Blitter). "8" - 68030 with 8 MHz.
"16" - 68030 with 16 MHz.
This row (and the following) aren't important for games with
Compatibility = "!". These are the switches for the ST-Emulators.

DC: Data cache. "-" - Data cache OFF.
"+" - You can leave the Data cache switched ON.

AC: Adress cache. "-" - Data cache OFF.
"+" - You can leave the Data cache switched ON.

STE: STE-Bus-Mode. "-" - STE-Bus-Mode is not needed.
"+" - STE-Bus-Mode must be switched ON.

SND: Sound. "-" - The game has no sound on F030.
"+" - The game has slightly distorted sound with ST-Emulation.
"!" - No problems with sound on F030.

HD?: Harddisk installation?. "+" - The game can be installed on HD.
"-" - HD-Installation is not possible.

A "?" means: unknown.
"*" in front of the name: new entry!

">?<" means: Info maybe wrong (conflicting reports)!
"Previews" are Demos of still unreleased, but upcoming games.

NAME ST C MHZ DC AC STE SND HD?

Chaos Strikes Back C1 ! - - - - ! +
Dungeon Master C1 ! - - - - ! ?

Some hints for ST-Emulators:

1) If you get 2 Bombs, try the STE-Bus-Emulation-Mode.
2) If you don't get correct sound, try to switch between "Timer A" and
"MFP"-Interrupt. Try "ST-Sound corrected".
3) If your game is protected and doesn't load properly try to switch off
both caches and switch the CPU to 8 MHz.
4) In Backward, always use "TOS patched" and "STE-Bus-Mode". You have no
disadvantages when using them (well...nearly none).
5) Set the Bootup-resolution to ST-Low. There are some programs which
allow you to alter the Non-Volatile-RAM of the Falcon.
6) If you have TOS 4.01 try to get TOS 4.02 from Atari! Some games have
problems with the bugs in TOS 4.01.
7) Known ST-Emulators:
Backward - Lots of switches, nice GEM-Interface, options can be
switched while playing, the best!
Magi-Boot - The first ST-Emulator.
Gamefix - German STE-Emulator ("TOS-Disk"), nice.
VCB - Writes Bootsectors. Switches can be made while playing.
FBoot - Writes Bootsectors. Only Caches ON/OFF, CPU 8/16 MHz.
Falcon SX - ACC which allows to switch CPU 8/16 Mhz and Caches ON/OFF.
Falcconf - CPX with: CPU/Blitter 8/16 MHz, Caches on/off, STE-Mode...
8) Users with VGA may try VGAPatch - this program helps in a few cases with
games only running on RGB.

] books.
]
] Adrian

Yes, all of this is true. It is horses for courses really, I use Pagerstream for all DTP work but for reports and letters, I always use TeX because once you have the macros set up all you do is worry about the actual words, and leave the typesetting to the software. Which is what it was designed for. It isn't a DTP program that's for sure but for typesetting and excellent print quality it can't be beat. The quality I get from a beaten up old Deskjet is brilliant.

> must say that Selectric doesn't support long filenames.

What are you all refering to as "support long file names", when using
long file names on normal fileselectors it messes up and simply
doesent read them, but using selectric 1.10 (NOT registered) it reads
the long filenames the same as DOS would by replacing the last few
letters with "~1"
it does the above as stated, that means in my mind that it supports
them, well it supports them in exactly the way i need it to?

So what have I got wrong, I presume I have the wrong end of the
stick, if your selectric 1.10 doesent support long filenames ?????

: knowledge of these? Anyone got one? Any comments?
Yeah, I've got a USRobotics Sportster VI 14400 DataFaxModem with personal
Voice Mail.... anyhow.... it's got a few bugs in the hardware :(for
example... the playing of tones are all the same (you should be able to
vary two pitches and one duration - I just get to vary the duration),
when recieving FAX's it has a page fault after the end of a page... you
can continue using ignore page faults if the software supports it (CoMa
is VERY good). Otherwise it's really quite nice.... you could also try
the USRobotics Courier... it's the model up from the Sportster and it has
V everything... ie V42BIS, V34 etc I think it also has Flash ROMS for
software upgrading of protocols but I'm not too sure.... I think that
that would be the way to go... although a Zyxel is supposed to be the
best modem in the world.... get a version 5 or higher, however you have
to be able to do 38400 on your commport (no problem for a Falcon, or TT,
but on a STFM / E you have to hack the hardware).... my Sportster works
fine at 19200 and I get around 1600cps on a ZIP, 1500 on a JPG, and
1900 on a text file.

Hi, you can play MOV files pretty easily on the falcon. I think
there's also a software to play them without the DSP. Off course the
speed or the sound won't be present. (relatively).
For the falcon you need to get MPLAYER. (play the movie and the
sound!). You can find a version at CNAM. It's a shareware coming from
france. The unregistred version will probably not show the colors. (I
don't know I have an old version and it shows the colors).
It's Compatible with a lot of graphic card, and the true color mode is
needed with Mplayer.
There's also an AVI player. (SOund and video) for falcon..
Still shareware and on CNAM.

MOV files are generally Apple Quicktime files. MPlayer will play them on a Falcon including the soundtrack. It also plays Flic files and Windows AVI. I don't know of any ST programs that will play them since the Falcon's DSP is utilised for speed. Could be wrong though :-)

Martyn

2589. SPICE electronic circuit sim

Newsgroup: comp.sys.atari.st
Date: 1996-11-12 00:00:00 UTC
From: B.S.Senior@bradford.ac.uk
Message-ID: <569s36$8ac@columbia.acc.brad.ac.uk>
Source record: 134143

A while ago there was some discussion about a piece of software called
SPICE which is used to simulate electronic circuits.
I obtained a copy from

ftp://ftp.funet.fi/pub/atari/applications/spice.lzh

and uncompressed it. However as it is a .TTP program I do not know
what parameters to pass to it. There seems to be no documentation
regarding the running of this .TTP program, just notes on the
construction of circuit description files (of which I have no problem
with).

I've tried just typing the name of the in file, into the .TTP
parameters box that appears, and a few other things but each time it
bombs and doesn't run. I have run the .PRG file that accompanies the
SPICE.TTP and this works. I can not remember if there is a help
command to display the flags used in the parameters box.

It has worked as I ran it a few years ago.... just cant remember what I
typed :(Am I forgetting something really obvious?
I know how to create .IN files as I use the HSPICE version, on
a SUN system.

Any help from anyone using the program will be much appreciated.

No DSP is used, but you need a 030 because of some instructions, so
a TT with graphics card will do as well.

: Absolutely. 2B should take a look at the Geneva manual. It tells you
: everything and even includes programming info.

The programming docs for MagiC 5 are 280 KB.
In LZH.
Do you suggest to raise the price by 20 DM only to add a manual that
95% of the customers never need and that is worthless with the next update?

Different to N.AES, GENEVA, MiNT, ... MagiC is a complete operating system
with a lot of special system calls that only exists with MagiC, and for
every release new calls are added. Take a look at Microsoft's programming
manual for Windows95, this is just too much to give it to every customer.

Hello. I have alot of Atari St games that I wanna sell. Most are still
in shrinkwrap and all have original boxes and mans!!! I would like to
'selll this package as a whole, but will connsider bids on seperate games.
Will take all offers on the whole package. Thanks. The games are:

GFL Championship Football
Knight Orc
Quadralien
Phantasm
GoldRunner 2
Accolade's Mean 18 Famous Golf Course
Imposssible Misssion II
Techno Cop
Renegade
Swiftar
Last Duel
Karateka
WishBringer (stone included)
The Pawn
Stunt Track Racer
Star Quake
All ABoard
Star Ray
Zyoaps
Winter Games
World Games
Star Trek: The Rebel Universe
The Bard's Tale
Leader Board Golf
NeoDesk 3: The ultimate Desktop
Flash
Mouse Trap
Epyx Art and Film Director
Into The Eagles Nest
Colonial Conquest
Test Drive
Temple of Apshai Trilogy
Rings of Zifin
Gauntlet 2
Phantasie 2

Thanks

>computer. The screen goes what with all kinds of nice colored lines.
>This is in 16 color mode.

Just use the old cab.ovl file to allow online connection. The new one
1.20h is buggued. Waiting for a new one to avoid this strange
behaviour. No luck, because the latest one allows cab to display html
page before the end of the dowload process ....

Just use the cab.ovl which was given in the www131 package !!!

Beware, rename (or delete) any cab.ovl in subdirectory modules in cab
path... cab.ovl can be put into modules path or cab path ... but cab
looks first in modules directory...

Hope this help ...

The happy french translator for cab and soon all stik other related
stuffs ...

OK point taken. As chief defender of MagiC perhaps you can answer these points:

So what happened to my updated manual with v5?

The manual I have hardly touches upon MagiC as OS preferring to detail MagXDesk, something few people use.

If you expect people to program MagiC properly, when are the programming docs going to available in English?

Help! :)....:(

I am having a problem using my ST Fax version 2.5. All myu parameters are okay....because it works fine on my Falcon. The thing is I wanted to use ST Fax on my 1040ST. I re-installed it so it would readl write with the 1040ST. Everything seems to go well up until..te time of transmit. I can see the computer accessing te Modem (Digicom / Eagle 14.4 Data/Fax modem).

It attempts to access it...and then drops out with the prompt saying that "modem initialization failed....or check connection of RS232 cable. Everything is okay, because I am using STalker right now with the same modem. Or do you think that it could be a problem on the FAX side of the modem? I did a STalker test on the modem and it reveals a Type 1 FAX section.

I would appreciate any help in this matter. It's driving me nuts! !@#$% hehe.

Help!

Please reply by email....

Aloha and thanks!

Vern

2604. Geneva 005 Patch now available

Newsgroup: comp.sys.atari.st
Date: 1996-11-12 00:00:00 UTC
From: dwilga@mtholyoke.edu
Message-ID: <dwilga-1211961205130001@dwilga.comm.mtholyoke.edu>
Source record: 134158

After much procrasti ...er... "beta testing", the new version of Geneva, release 005, is now available in the form of a downloadable patch program. Both it and a new demo version of Geneva can be obtained from our Web site: http://www.pair.com/gribnif/

After you have completed the patch, be sure to check out the new version of GenevaRun, a shareware program launcher, and also the demo of the Geneva Macro Editor 2.0. These files are written to your Extras disk.

The Macro Editor is a nifty companion to Geneva which allows you to easily create and edit macros to automate typing, mouse movement, and more. New in this version is the ability to type date and time strings, as well as to put up user-defined messages. Macros can now also be started automatically at certain dates/times, and even repeated periodically.

Please note that this Geneva 005 patch works only with English language versions. Patches for other languages will become available in the coming weeks.

>Reg Loeppky
>
>--
>reg@awnet.com

Have you put "STIKTSR.PRG" length 2042 bytes in the auto-folder?

Try it. Copy the folder and delete all other auto programms. Then copy
first STIKTsr in the folder again and try to start stik after reboot.
The put one autoprogramm after another in the folder again and try
which programm works with stik.

In this way I got stik working on a Mega ST. First I had the samme
error message: >STIK Not Initialized
>Can't Load Config
>

Martyn Tidd (etlmntd@etlxdmx.ericsson.se) wrote:
: So what happened to my updated manual with v5?

Sorry, I do not understand the question. Perhaps I do not speak English
well enough to understand this.

: The manual I have hardly touches upon MagiC as OS preferring to detail
: MagXDesk, something few people use.

And what do you think most people use?

: If you expect people to program MagiC properly, when are the programming
: docs going to available in English?

I hope people to program MagiC but I do not expect it. There are so little
people outside Germany programming MagiC that it simply is not possible
to translate the documentation. I do not have enough time to do this, and
unfortunately I was neither born in the UK nor in the US nor in Nigeria, so
I only can do it in German.
The German documentation is freely available, e.g. at ftp.cs.tu-berlin.de.
It is regularly updated.

Some years ago I wrote a mail concerning shel_write. I post this here so
that anybody can read it:

==========

> I then tried shel_write(100, ...), relying on some information passed on to
> me be a MagiC 2 user. However, the child program does not start until the
> parent terminates.

The problem is an incompatibility between MultiTOS and TOS. And as MagiC
is older than MultiTOS I avoided this incompatibility.
MultiTOS uses the "doex" parameter of shel_write() for selecting the main mode
of the command. It uses a zero for the normal parallel starting procedure.
But zero means in TOS: Cancel all previous shel_write() commands.
Therefore I implemented doex=0 as it is in TOS, not in MultiTOS. You can
check this at run time by doing "appl_getinfo" (-> MultiTOS 1.08 Documentation).

In MagiC you use the normal TOS-parameter <doex> = 1, and use <isover>,
sometimes known as <iscr> (I think it is the second or third parameter, do not
mix it up with <isgr>), to
set the mode "start after termination" (0 ?) or "start parallel" (100) or
"start in single mode" (101).
I include all documentation for MagiC 4 with this mail. Most of this you won't need, but I
did
not want to break the archive. Use MAGX.H for the #defines for the parameters

<doex> and <isover> in shel_write().

2610. NVDI/AtariWORKS Compatibl

Newsgroup: comp.sys.atari.st
Date: 1996-11-12 00:00:00 UTC
From: fl@zot.io.org
Message-ID: <56aebl$4ta@zot.io.org>
Source record: 134164

dogmeat@netcom.com wrote in NVDI/AtariWORKS Compatibl

d> I recently purchased both NVDI 3 and AtariWORKS V1.2. After
d> installing both on my TT it seems that the driver insists on printing
d> "CJ" in the top left hand corner of each page. GRRR! and otherwise NVDI
d> works great! and I love AW - so much easier to use than That's Write!.

Be prepared for some wierd inconsistencies between NVDI and AtariWorks.
There were a few roundtable discussions back in the days when Genie had an
Atari discussion area, and some BBSs have files with the text of these --
look around.

Most of the problems I have seen have to do with the fact that NVDI
measures margins from the edge of the printable area (which on a laser
printer is about an eigth to a quarter inch in from the edge of the
paper), rather than from the actual edge of the page. I have had to
adjust the margin settings in all my AtariWorks documents to compensate
for this since there was no way I could find to adjust this in the printer
driver creating/modifying program that came with NVDI 4.11.

As for the spurious character in the top left corner: I used to have this
problem when I used SpeedoGdos 5.03 and my HP 5L Laser Jet. In my case,
it would put a little, black half circle in the upper left corner. NVDI
does not, but I have the margin problem.

I have come to the conclusion that you just can't win. The font
implementation on the Atari platform has been a problem from day one, and
all the various band-aids from Gdos 1.1 to NVDI have problems of one sort
or another.

I'd suggest that you look into upgrading NVDI to the current version, and
trying to modify the BubbleJet driver you have with the program that comes
with NVDI 4.11. The real answer might be to disable all the font
implementation of NVDI, and just use it as a screen accelerator with
SpeedoGdos taking care of the fonts... Just a thought.

Hi there..!

I have a Sportster Voice/fax modem that I would like to use to its full capabilities.. but I'm not sure if there is a peice of software to let me do this?

I want to do 1. Voice messaging
2. Fax transmissions
3. Voice massageing with mailboxes

Not 2 important but would be nice!
4. Host data mode

If you know of software that would do this please let me know!!

E-mail: dooley@infomatch.com

I'm running a 1040 STe 4 megs Tos 2.06

Thanks
Johnny

The difference is that NVDI 3 and 4 exist, 5 doesn't.
NVDI comes with better user support for viewing and installing fonts.
And it has some improvements concerning the Mac environment (You are able
to use Mac fonts _AND_ GDOS fonts, very nice!).
The most recent verseion is 4.11R6, as far as I know.

>>letters with "~1"
>
>This is not Selectric doing the work !!!

Hmmm The Myst clears slightly, When I set up Gemulator96 + Magic4.1
Plus any desktop, all in Windows 95, then the fileselctor simply
showed gobbledygook when confronted with long filenames, it just would
not handle them,
So I used Selectric 1.10 (Not Registered) and hey presto! I could
read the folders and files that had long filenames, Selectric showed
them in 8.3 format, where the system fileselector would not show them
at all,
Thus for ME selectric worked fine and in my eyes supported long file
names (an obvious assumption under the circumstances), But it would
seem that in the real world, this is not termned as "supporting"
them...

Spooky, but what the hell, it supports them as much as I need it:)
But apologies if I put anyone on the wrong track regarding there
selection of selectors ?

Cheers.............!ynoT

There is an AUTO folder program to read the cartridge and set the ST's
clock and a second program to set the time and date. I can't help you to
get them, I'm afraid, as I've sold mine.

The only problem that all info you can get on MagiC, except the the few
words in the manual, is in german, so it doesn't realy help if there are
100MB of ASCI files describing MagiC as it's all in german. I can't think
that MagiC has sold that bad outside germany, or has it?

> include a nice fat manual (worth the cost). A good example of what a good

I havn't seen the manual to Image Copy, but I bet that you wont find the manual
to MagiC near as good. It's about the same level as the one you get from Atari
when you buy the computer if you rip out 80% of it.

After all MagiC is a complete OS, not a just MagXDesk (which I have in swedish
btw.)!

Not that MagiC is hard to use, but I would like to see some more info, especially
on VFAT in MagiC 5 and device drivers.

> This is correct.

Would be hard as it doesn't even excist!

> : Any other programs except MagX-Desk which uses threads?
>
> Windows 95.
> B-)

:-)

So what is the difference between MagiC and Win95? I thought MagiC was
the Atari port... they both have VFAT and they both crash. Hoho.. B-]

Hi,

Does anyone know what terminal emulation the Telnet program that comes with the WWW kit is? My login account has TERM set to VT100. I can connect to it using Telnet but the screen will not scroll so all commands after the first few are lost. The docs make no mention of this.

Thanks,
Michael

2635. Small Atari auction, update #3

Newsgroup: comp.sys.atari.st
Date: 1996-11-13 00:00:00 UTC
From: smedley@gte.net
Message-ID: <56crft$dl1@news3.gte.net>
Source record: 134037
Cross-posted to: comp.sys.atari.st,rec.games.video.atari

****
*** MAJOR UPDATE ***
****

I have recently had two 'buy-out' offers to take a big chunk of the auction off my hands in one shot. One guy wanted the TT and a video card, the other wanted both of those plus the scanner. The offers were higher than the combined bids on those items so far. These buyers are not interested ingetting item A without also having item B to go with it, so...

I am adding a section for buy-out bids. If the seperate bids for those items is LOWER than the buy-out bid, then I sell them as a paclage. But if the individual item bids are higher, then I sell off the individual parts. Buy-out bids are listed at the end of this post.

Auction rules -

Bids will be accepted until Saturday, November 16th. At that point the auction will go to a "going once, going twice" format, with updates sent by e-mail to all participants. The auction will end NO LATER THAN Thursday, November 21st (Turkey Day). If there are still competing bids for an item when I check my e-mail that morning, the highest bidder in my mail box gets it. Bid increments are a $1 minimum.

ALL PRICES ARE IN U.S. DOLLARS!!!

Shipping to be paid by buyer. All items shipped COD.
(I will pay COD charge, since I insist on shipping that way.)

-=-

Item #1 - Atari TT030 workstation

4 megs ST RAM
TOS 3.06 ROMs (USA)
720K floppy drive
120 meg hard drive
Long-range printer port modification
Revision H motherboard (will accept CaTTamaran 48Mhz upgrade)
Includes AtariWorks, Civilization, and a few misc. games

This system was formerly used to control an automatic embroidery machine, which is why the transmission distance on the printer port was boosted (sorry, but I don't know what the actual range is). The floppy drive is actually a 1.44 meg mechanism, the system lacks the

Ajax driver chip required to do 1.44 meg read/write operations. (BTW - Toad sells these chips for $40.) Keyboard & mouse included. Has been packed away in my closet for some time, so clock battery is probably dead.

Current bid: $200 by ghaddrel

CLARIFICATION - I cannot verify if the floppy is really a 1.44 meg mechanism. That is merely what I was told when I bought it. I do have a spare 1.44 meg floppy drive that I will include at no extra charge, just in case the drive turns out to be 720K after all.

-=-

Item #2 - AlberTT VME graphics card (x2)

1024x768 w/ 16 colors (compare to TT medium res of 640x480)
VGA output (48 Khz horizontal scan rate @ 1024x768)

This card requires a minimum of 4 megs ST RAM to operate. I have two of these, so the second highest bidder gets the other one. They should be compatible with just about any GEM program that recognizes the TT video modes. (I gotta admit, I have not tried them with anything - my monitor went on the fritz right after I got the cards so I haven't hooked them up. They do work, though - saw them tested before I paid for them.) I have no idea if it will work on a Mega STe.

Bid on card #1 - $40 by Marvin
Bid on card #2 - $35 by atari

-=-

Item #3 - Hand scanner w/ Touch Up software

400 dpi scan resolution
Cartridge port interface - no SCSI hardware required!
Includes Touch Up edting software

Everything works great in this package, and the scanning/editing software, Touch Up, is a fantastic package. Will work with any ST, STe, TT, or Falcon. In their most recent catalog (95-96) Toad sells a similair scanner for $109, plus another $39.95 for the software.

Current bid at $30 by dooley

-=-

Buy-out bids -

TT030 + one video card = $275 by smokin

TT030 + one video card + scanner = $300 by hdiaz

-=-=-=

That's not true.

I'm sure we are found more as 10 people in few minutes that need a manual
with MORE spez.informations about magic5.0x
magic5 have ONE smal manual for magic5, magicMac and magicPC..

Right, manuals are expensiv.
Very "thin" manuals are lazy..

With some special problems we are lost in space...

So i take the first help from newsgroups or some other customers with
the same trouble, not from the manual..
That is not the right way.

OK, that's only one example.
Sorry, i'm only customer..

Hi,

Can anyone PLEASE help me set up my friend's ST on the net ?!!
I have tried loads of 'internet packages' for the ST, but they
all seem very unstable or impossible to set up !!

Can anyone recommend a SIMPLE, easy package that will give me
web access, e-mail, usenet and FTP ?

The ISP is Demon (UK).

My friend is going nuts trying to get it all working, and me too !

Can anyone help ? - PLEASE !! :-)

(Can I ask for e-mail replies please ? [technical difficulty in
accessing usenet !])

Cheers,

Kevan Winch

>command to display the flags used in the parameters box.

I use this program a lot. My copy came with a program called PRL.TOS
which has to be run before SPICE.TTP. You don't have to enter any
parameters on the command line (it should prompt for an input file
once it's loaded) and I can't get it to work with TOS 1.4 just 1.2

Hope this helps, Gaz.

BTW I have the C source code and I'm in the process of recompiling it
so that it will run properly under any TOS or replacement. Email me
for details.

Yep you're absolutely right! I've just tried it all again and it's working
brilliantly! Much faster. I too, had noticed this problem ages ago on an old
version of cab and of course it just happened to occur this time after
installing the new jpeg ovl, and I (wrongly) assumed it was to blame :(
Ah well, it's working great now!

I still maintain that jpegd has a problem with Magic! It definately locks up
a lot (and that's with cab, imagecopy AND the supplied jpegd.acc(or whatever
it's called)! Anyone else experiencing this? WHICH version of jpegd.prg is
the latest????? I've got THREE different ones.

>>I have noticed (when using jpegd with Imagecopy etc) that it refuses to load

>if you try to use a more tolerant viewer the picture show up, but
>parts of it are distorted beyond recognition.

It seems to be a combination of the jpeg and the powerup2. Some jpegs decode
fine at 32mhz and others refuse (but work fine at 16mhz).

I received a message from Concentric stating that the responsible individual
had been terminated. Unofrtunately, public evisceration is no longer a
legal punishment in this country.

Regarding your need for a killfile for tin - I'd suggest finding the tin FAQ
file - it must be someplace on the 'net, and the author(s) of tin would be
the logical place to start.

>
>Many variables - need more input!
>
>

Wow, I finally got the modem to dial. Apparently there was a bug of some sort in the www130 package. I finally found www131 package (with a mewer STiK), and it worked. No, I don't have HSmodem installed because the instructions are utterly incomprehensible. However, that does apparently limit my speed. Now I have an entire series of other problems which seem daunting. (one fun one is that after installing the newest version, CAB tells me "read error on file /" no path, no filename, nothing! This is so frustrating!!!)

Here is the *host* of problems I am encountering:

Following up my own message, I actually managed to get STiK to dial
after hours of troubleshooting. Seems the modem was not responding
to the init string under the normal entry in the STiK setup.
I had to delete that and manually add it (atdt) to the beginning of the
phone number!! I also had to upgrade to the version of STiK included in the
www131 archive. Anyway, I'm still having so many problems I can't even begin
to troubleshoot it on my own. 1) I get no usable speeds above 19,200
(the modem is a USR 33.6 which works find on my Mac). 2) When
I connect, it makes zero difference if I have the correct
user name and password entered. I can enter complete garbage and it still
thinks
I am making a good connection. The script seems to be correct, it is the same
one that works on my Newton (which also gave me fewer problems, believe
it or not!). 3) Nothing works, not CAB, not AntMail, not nuttin'. Let me add
that I can set up
PPP/SLIP accounts in my sleep on other platforms, I am not new to this, so I
figure I must be
overlooking something very simple that is specific to STiK. One thought
that occurs to me is that STiK has no provision for entering the GATEWAY

ADDRESS. I can
enter the host name (tiac.net) and the DNS server, and of course
my own IP number. I have arranged for the account to be a static SLIP account.
I also run 5
PPP accounts
for my employer through tiac with no difficulty. However, in all of these I can
enter the
Gateway Address.
How can STiK possibly work at all without this setting???

Any help would be useful.

a) how do I get more than 19,200? I downloaded hsmodem, but the instructions
are unusable. (running it seems to do nothing)

b) has anyone gotten STiK to work with TIAC? if not, why? if so, how?

c) Has anyone gotten Netcom and STiK to work together? how?

d) Anyone got a handy login script for a decent nation-wide ISP you could
post???

e) Why am I up so late?

Thanks in advance. Oh, I'm on a 14mb Falcon (clabs) with
a 33.6 modem and all non-essential auto programs off (fspatch seems
necessary, STiK also won't dial my modem without this installed).

This is really bugging me, do you get that impression???

- David Butler

Except you MUST modify either the drive or the cable; the ST wants A: to be DS1 and the PC wants it to be DS0 (or vice-versa; the drives come set up for the PC). Older drives have a jumper that allows you to set the DS (some of them even allow you to have DS0, DS1, DS2 and DS3) but newer drives have only a surface-mount zero ohm resistor, which is next to impossible to remove. In that case, you must modify the cable - or get a new 720k drive which was made before the jumpers became passe`.

I don't know the details of the French machine, but I have
talked to David Encil and he stated that the developer of the
Afterburner said the 060 would work on that board.
He said he would ask for more information.
The Motorola spec says that it is bus compatible with the 040
and basically requires only an FPU patch.
David mentioned something about being expensive??????
Could you really put a price on YOUR 060 Falcon ? :)
Afterburner 060@48mhz + Nemisis and 24mhz bus.....
It boggles the mind.

: How fast is 56001(32MHz), 68000 (8/16 MHz), 68030 (16MHz) and 68060 (60MHz)?
: (MIPS,FLOPS, or compared to quite fast Pentium)

Looking at the BogoMIPS rating table gives :

68030 @ 16MHz (Falcon) : 3.95
68030 @ 32MHz (TT) : 7.98
68040 @ 66MHz (Medusa) : 22
68060 @ 50MHz (An Amiga) : 100.16

(I know the '040 is probably really running at 33MHz before people scream 'n
shout, it just says 66MHz in the list !)

I think the 68000 at 8MHz is rated at about 1MIPS or maybe a bit less.

As against this, Pentium systems range from about 23-24 for 60MHz systems
to 67 for 166MHz systems. Pentium Pro/200MHz machines manage ratings of about
200. 5x86 machines at 100MHz are rated around 100. There are also SMP
Pentium 90s listed whch are rated at about 72 (I don't know what the SMP means)
and SMP Pentium Pro/200s at around 398.

Whether these ratings mean anything or not is another matter ...

It's not so easy to compare the 56001 to the others, it can do a 24*24 bit
multiply in two clock cycles, simultaneously adding the result to a 56-bit
accumulator and so on. Certainly the likes of the '030 and 486 take
many clock cycles (20+) to do something similar but maybe the Pentiums are
a lot better (?). So, it does 16MIPS at 32MHz but these instructions can
do a lot more than equivalent instructions on the other processors.

ATB,
Aidan.

Actually the "CJ" originates from a faulty print command in the bj10
driver supplied with nvdi3. It can be fixed with the printer driver
"editor". The editor is a bit buggy so you have to experiment a little
to make it do what you want.

If you have a Canon bj200 printer you can use the the Epson 48 needle
matrix emulation at 360 dpi with excellent results.

Perhaps it matters if you've registered it or not...
I've got the registered version, but I have no idea how I can try it with
long filenames.. MiNT? (I need to get my harddisk setup fixed first).
Other than that I agree with Martin Byttebier that Selectric is the best!

I downloaded Freedom-2 a couple of days ago, hoping that I would get more
impressed by it than the previous version, but I wasn't.
Sure, it looks pretty cool, but it's not really user-friendly. I guess I'm
one of the many who likes software where you can just dig in, instead of
having to read xxx pages of manuals. Selectric is like that!
(by the way, is version 1.10 the latest one? Is it still being developed?)

2666. Geneva 005 now available

Newsgroup: comp.sys.atari.st
Date: 1996-11-13 00:00:00 UTC
From: fkeylard@linguatechcorp.com
Message-ID: <32892e0c.320183007@news>
Source record: 134102

After much procrasti ...er... "beta testing", the new version of Geneva, release 005, is now available in the form of a downloadable patch program. Both it and a new demo version of Geneva can be obtained from our Web site: http://www.pair.com/gribnif/

After you have completed the patch, be sure to check out the new version of GenevaRun, a shareware program launcher, and also the demo of the Geneva Macro Editor 2.0. These files are written to your Extras disk.

The Macro Editor is a nifty companion to Geneva which allows you to easily create and edit macros to automate typing, mouse movement, and more. New in this version is the ability to type date and time strings, as well as to put up user-defined messages. Macros can now also be started automatically at certain dates/times, and even repeated periodically.

Please note that this Geneva 005 patch works only with English language versions. Patches for other languages will become available in the coming weeks.

Selectric do not support long filenames --> only 8.3 format.

> What are you all refering to as "support long file names", when using
>long file names on normal fileselectors it messes up and simply
>doesent read them, but using selectric 1.10 (NOT registered) it reads
>the long filenames the same as DOS would by replacing the last few
>letters with "~1"

This is not Selectric doing the work !!!

Try using a Win95/NT file with a long filename diskette on a MSDOG 5 PC. It
will read the filename as "~1" filename. MSDOG 5 do not support long
filenames, it is the way Win95/NT writes them onto the diskette, so to make a
system which do not support long filename read the file as 8.3 with "~1"
suffix.

I have experienced this, and use Selectric to read files from those diskette
with "~1" suffix, maybe one should say that Selectric is MORE STABLE and
TOLERANT fileselector than the others.

Regards
William

From: wongck@ti.com
Message-ID: <56bblb$1e0g2_002@news.ti.com>
Source record: 134104

I guess the original poster assumed everyone is familiar with the way
MicroSloth convert long filenames into 8.3 format.

> selector I haven't test is the TOS selector). What I don't
> understand is what you mean with "~1". If I view my minixfs

This is Microsloth way of decoding a Win95/NT long filename into the good old
8.3 filename. It appends that "~1" into the filename part (so now you have
only 6 characters for the name + "`1" to give 8 filename characters).

> the same directory.
> e.g. martin-14-8-96.txt
> martin-14-9-96.txt
> Selectric displays both files as martin-1.txt

This means Selectric do not support long filenames.
So if the "~1" way is used then you should get:
martin~1.txt
martin~2.txt
So no mixup here !!

OK, so I've got a presentation due in two weeks, and of course, I want it to look good. Is there a PD/SW/FW program for the TT that'll let me do a bit of page layout easily, importing graphics, something along the lines of Powerpoint except not so big, "feature"-laden, and clunky? (Don't say Kandinsky, because it crashes regularly on my machine.) Of course, I always have the option of actually using Powerpoint, but I'd really like to use something on a system I like...

: : Absolutely. 2B should take a look at the Geneva manual. It tells you
: : everything and even includes programming info.

Yes...the Geneva Manual is nice...
I've not yet seen the MagiC manual...

Might I add...If it'll save us a few bucks...I'd be just as content
to have built in help files like Geneva Has. Does MagiC have built in
help? (I'll find out in a few days :)

I must agree with an earlier post stating in-depth programmer's info
isn't a must for a good manual. If this is even included...it is
just as effective, and much less expensive to provide it on a disk
as ASCII. I've even seen some software that includes docs in ST-GUIDE
format...with no manual at all. Simply print it if you need it in
hard-copy. Personaly, I'd rather have the technical docs in electronic
form...as I can easily cut and paste examples right into my compiler.

Software with a steep learning curve, such as a midi sequencer, or a DTP
package with tons of helpful back ground info that isn't really specific
to the program itself...I must agree it is very nice and welcome to
include a nice fat manual (worth the cost). A good example of what a good
manual (IMO) contains is that of Image Copy. You get pages full of neat
info concerning different image formats, the history behind them,
etc...then you're given some info on how to work with images in given
situations. Same for PageStream...you get an overview of
printing...layout...fonts...and a crash course in
Printing Jargon. The program specific stuff can usually be well
documented via help pages built into the program...hence updating and
changing doesn't require costly manual addendums.

2679. Re: JPEGD/CAB and the new jpeg.ovl - problems

Newsgroup: comp.sys.atari.st
Date: 1996-11-13 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <56bte4$a18@einstein.ebicom.net>
Source record: 134115

Am I confused???
I've installed the DSP-Jpeg_ovl on my Falcon...but I didn't install
the accessary that came with it. I'm assumeing this new overlay
simply uses the DSP to "convert" the image into CAB for the sake of
speed. Is this a correct assumption?

Since I use Image Copy 4, I already had some kind of DSP loader installed
in the auto folder so I didn't install the one that came in the DSPJpeg
archive. Isn't this the same program "jpeged"?

Perhaps it's all in my head...but JPEGS do seem to display a good deal
faster in CAB now that I've switched overlays.

Guess the question is...
Does this overlay use the DSP to load the images for CAB?
Or...Is it only good with the ACC viewer that comes in the archive?

Thanks,
Brian

> >owners. DSP use is a must...

This is partly true. It depends on what type of Quick Time compression
was
used on the file.
By a slow Mac however, you must mean a slow PPC. I have a Quadra running
an 040 at 50mhz and the Falcon will play "compatible" QT movies just as
fast as my Mac.
The best way to go by far is to convert your QT movies to mpeg with "I"
frames only. Even on the highest quality compression setting, a 220mb
QT movie reduces down to a 22mb mpeg. Much easier to handle, and
playback
on the Falcon is the same as on the Mac (mine anyway). The Falcon was
running MPEGDSP from 32mb of fast ram and a 50mhz DSP. I haven't tried
M-Player, yet. I'd post a 20mb demo I snuck of the Back to the Future
ride
at Universal Studios, but I don't have my Falcon hooked to a dish yet:).

I'm looking for ways to add sounds to system events on an ST. (not an STe dammit!) I've got the DigiStuff package, it comes with a neat little TSR called DigiVec, that allows you to trigger sounds from system vectors. Does anyone have a complete list of system vectors? In particular I'd like to trigger a sound when Cntrl-Alt-Del is used... (I have TOS 1.2, Universal File Selector allows the use of Cntrl-Alt-Del)

Is there an english version of CrazySounds? The one I found on ftp.cnam.fr is in french... :P

I had asked David if the AB040 would be available with out
the CPU as I already have a 40mhz RC040. He said that it would
be interesting to try it at 48mhz as the 33mhz chips they use
won't run that fast. Is there another reason why the 040 would
not run with a 24mhz bus?

>
> Now we only need a adapter from 5 volt to 3 volt. There are such

There are several 060 cards for Amigas now, possibly some may
use the adapter for fitting older 040 boards.

Hi All,

Just wanted to clear up something thats been going on regarding duplicate postings from myself.

For some unknow reason, I have not been able to see any Replys to my postings in the Atari News Groups using Oasis v1.35E. This is why you have been seeing postings from me that are similar to ones I've posted eariler. I was under the impression that know one had replied.

Now that I'm using something different on my Falcon, I hope this will solve this problem. I have now been able to get the replys that were sent, and I thank everyone who helped answer my questions and etc.

In article <3283865F.7203@execpc.com>, Eric H <ehe@execpc.com> says:
>
>I wish to upgrade a 1040 STE to TOS 2.06. I have a Gemulator board with
>a set of 2.06 ROMs. Before I risk anything, does anyone know if I can

Very good idea. Huge advance on TOS 1.06. But a couple of problems:
1. if your STE has 720k DD drive(s), you need a wee auto-patch program
to change the step rate
2. if you have a B: drive, you need to patch your TOS else spurious
read-errors.
2. when you click once on a windows arrow, the AES sends a bad message
resulting in _two_ movements of the window. Most annoying in e.g.
PageStream.

These and some lesser problems can be fixed if you get into eprom blasting.
For full details of patch files, see my addenda to TOSPATCH in the Hensa
archive.

Interesting... How then do you get them to boot? AFAIK, you have to boot
the Falcon in ST-Low, which, other than using Backward to do it, requires
you to set the NV-RAM to boot in that resolution, which I really don't want
for everyday use (gee, imagine that! :^)). Is there an easier way that
I don't know about?

Sorta on a new topic, I'm disappointed that Lure of the Temptress doesn't
seem to want to run on my Falcon. :^(It's such a wonderful game, but I
guess that's why I bought the regular ST - to play the ST-only games.

>I have asked my ISP, and they only support SMTP receive for "dedicated
>line" clients. It would be difficult to test remotely, but I suppose
>it could be done. Its just a matter of time...

I presume this means they only deliver mail by SMTP to customers who have a permanent connection to the Internet. That implies to me that even if they did let dialup customers switch from POP to SMTP, they have no mechanism for triggering automatic mail delivery when that customer dials up. So you would have to stay logged in until the mail queue was scanned, which is typically done every 4 hours, but could easily be as many as 8 if they process a lot of mail.

On top of that, SMTP mail delivery won't work in the first place unless you have a static IP address or they do something fiendishly clever.

Being the system administrator of an ISP, it would be straightforward for me to set up triggered SMTP mail delivery to a particular IP address, for the purposes of testing. If you have a static IP address and want to test an Atari SMTP server at some point, let me know and I'll set it up. I extend the same offer to anybody else working on an SMTP server for Atari machines. The mechanism I have in mind will work even if your own ISP won't deliver SMTP mail to you, and uses ordinary Sendmail. Obviously I'd draw the line at anybody testing their server by throwing huge mail messages at it. (:

Why am I making this offer? Well, I don't think we've got any Atari-owning customers, but I'd like to see a stable, comprehensive Internet software suite for the platform which we could distribute in an easy-to-install set of disks as required. (Can't test any of the existing software myself at the moment, sadly, as my STE currently has a space in the motherboard where a new DMA chip will one day be installed.)

For some reason I am not able to copy files from my cd-rom drive to my hard disk. I just bought the Crawly Crypt Collection Vol. 2 and in order to flag programs to run in TT ram, I have to be able to copy them to the hard disk. I seems that I am able to copy the full file, but the computer does not recognize it as a program. This also occurs when trying to copy fonts off of a font cd to my hard drive. The fonts I copy seem to be corrupted. Does anyone else have this problem? I think it is a problem with extendos pro.

I am able to run all programs from my cd-rom drive successfully, but I have limited ST ram so I need to be able to first flag them for TT ram, creating the problem mentioned above.

It sounds like I had the same problem as Katherine so I went out and
got a new floppy drive. Here's the (same) problem I'm having...

If I put the cables in the RIGHT way the desktop won't come up (just a
green screen) and if I put the cable in the WRONG way the desktop does
come up (the white icons on the left) but the drive just keeps on
spinning and I can't do anything with it. I looked for jumpers on the
drive to mabye adjust it or something but there aren't any. Anybody
know what's up??? Do I need a new boot up disk???

Thanks in advance for any help!!

2693. Explanation of "AV-start" wanted

Newsgroup: comp.sys.atari.st
Date: 1996-11-14 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <22638_hsideras@mettav.demon.co.uk>
Source record: 133972

Hi Hallvard, on 12 Nov 96 you wrote: ...respect, brethren

h>

h> I've often seen options in programs for "AV-start" for various
h> programs, but I've got no idea about what it's for...
h> Some sort of "quick start" or something?

IKWYM. It's something often talked about, but rarely explained in layman's language. It seems to be a common method that programs can use to communicate with each other - a way that one program can tell another about its status or an action it wants to perform.

So, in a multitasking environment, Everest uses the AV protocol as a method to realise that, say, a file is being passed to it and to say it's already running so it does't need to be loaded a second time.

(Probably very badly explained, but it's the best I can do...)

Regards, Harry Sideras - UK Association of Atari User Groups

!@#$%
>hehe.
It is my considered opinion that STalker digs in deep to the
operating system, and doesn't really put things back the way they
were even if you use the 'Stalker Exit' script (BackTalk). STraight
Fax!, in particular, dislikes running after STalker. What I do is to
run the Stalker Exit script, and then run 'Bob's Calltime'. This sets
the clock in my TT by calling the Naval Observatory, and seems to
also put the Modem CPX back into control of the serial port. Then
STraight Fax works properly.

ST wants drive A set to DS0
PC's have a special cable that reverses the select lines, so drive A needs
to be set to DS1.

>the drives come set up for
> the PC). Older drives have a jumper that allows you to set the DS (some of
> them even allow you to have DS0, DS1, DS2 and DS3) but newer drives have
> only a surface-mount zero ohm resistor, which is next to impossible to
> remove.

Just use TWO soldering irons; apply the irons simultaneously to each end
of the resistor. When the solder melts, lift off the resistor by clamping
it between the two bits (this is easier to do than to describe).

You can always break the resistor with a pliers, you want it open circuit,
& replace it with a wire link.

In that case, you must modify the cable - or get a new 720k drive
> which was made before the jumpers became passe`.

Hard to find nowadays.

> Looking at the BogoMIPS rating table gives :
Just in case people don't know BogoMIPS are from Linux. Do *not* use them
for benchmarks. IIRC they are calculated as a timing loop needs to know
them. Pentiums turn in bad performances. Some chips (like DEC Alpha?) turn
in performances of several thousand - althought they may be only five times
faster than a Pentium :)

MIPS are not much better - a better meaning for it rather than Millions of
operations per second is probably meaningless indication of processor speed.

I heard a while ago that the 060 is about 3/4 times faster than 040 which is
3/4 times faster than 000. How accurate this info is, I'd rather not say!

My name is Brandy Lynn Altschul. I am a sophmore majoring in pediatric nursing at the University of Michigan in Ann Arbor.

I'm originally from South Carolina, where I was the valedictorian of my private high school.

I've been reading all these postings and/or spammings about the naked mile and thought I'd put my two cents worth in.

Of the hundreds of women who ran the naked mile last year, very few were freshwomen as myself. Most of the other women I ran with were seniors who had never run the naked mile before.

But when I came to U of M and heard about it, I thought it was such a cool idea :) I decided to run it all four years!!

Yes, you heard me, I ran the naked mile and I am proud of it!!!!!

Plus, I know I'm featured in at least one video- well maybe featured is not accurate, but my picture -- and it is very revealing :)
is in that naked mile video they are selling out on the 'net.

What would my mom say????

She'd be just as proud of me as I am!!!!

She taught me to never be ashamed of my body, and
I'M NOT!!!!!!!!!!!!!!!

So to all you jerks out there who are upset about the naked mile and the people that have spammed usenet about it-- I say

KISS MY NAKED ASS!!!!!!!!!!!!!!!

Expensive? Noo... just as much as a AB040RC. :-)

> Could you really put a price on YOUR 060 Falcon ? :)
> Afterburner 060@48mhz + Nemisis and 24mhz bus.....
> It boggles the mind.

Well, you can't use 24MHz bus with the AB040, so you would have
to be happy with a 20MHz bus and 60Mhz 060 (if you replace the
chip that handles clock doubling from 2 times to 3 and I think
this one is mounted in a socket so it should he easy).

Now we only need a adapter from 5 volt to 3 volt. There are such
things for the Pentium or 486 (not sure which one..).

:-)))

But this french machine sounds nice as well. Not sure how "compatible"
it is though.

You're lucky! Apparently my upgrade fee from MagiC 4 to 5 didn't entitle me to a new manual. I have to use the v4 leaflet.

Seriously, there does seem to be concensus that the MagiC manual is inadequate so instead of just telling the paying customers they are wrong, how about doing something about for v6 guys?

On the subject of English programmer information - let's just assume for the moment that anyone interested in this would already have info on TOS programming and also (I'm guessing here) that most of the MagiC programming info will be identical. How about just translating the parts that differ from or are additional to TOS. Just a suggestion.

2711. Do you want regular Oases coverage?

Newsgroup: comp.sys.atari.st
Date: 1996-11-14 00:00:00 UTC
From: Matthew Townsend <there@dial.pipex.com>
Message-ID: <328BA789.45C6@dial.pipex.com>
Source record: 133990

This week issue three of the fortnigthly IC magazine was released. This newsletter started out as an Atari ST based UK publication. We now offer subscriptions to users throughout Europe, North America and Canada. Although the magazine is written with a UK slant, subsribers throughout the world are already enjoying the frequency and content of the magazine.

What's more exciting is that, in addition to the three pages minimum of ST coverage we now offer per fortnight, ICM may also be covering the Omen/Oases platform in the near future - if there is demand. Please do contact me if you have any interest in this project or would like to express an opinion.

Regards Matt.

P.S. Omen/Oases coverage will not commence unless there is significant response to this email and an accompanying snailmail campaign in the UK. Follows - more info about ICM:

Matthew Townsend, 117 Oakridge, Y Ddraenen, Caerdydd, Cymru CF4 9BY, UK.
there@dial.pipex.com
mabb23@dial.pipex.com.

IC Magazine Details
A fortnightly newsletter dedicated to the Atari platform of computers in the UK. Each issue will be approximately 3 A4 pages and available through subscription only. The name of our publication will be IC magazine (Independent Computing), which is appropriate because of the way the Atari users are now only supported by a network of small businesses and relatively free from the major multinational corporations.

The magazine's format
At risk of losing potential customers I've felt it important that the magazine takes an unusual format, so that it compliments other available magazines and diskzines instead of simply splitting readerships between us.

Therefore, I have decided that it will be available. Due to high costs of regular distribution and lack of financial backing, the magazine will initially be little more than a newsletter - only two to four pages each issue. The magazine will black and white and produced entirely on an Atari ST running Calamus 1.09n.

Content
Due to its frequency, IC magazine will be largely news-based, although many ideas have been received for possible features and regular columns. These include: falcon coverage, s/ware and h/ware reviews, adverts, interviews, general articles, programming, games, beginners, MultiTOS, Mint, help with applications such as STik and Mintnet and comms/internet articles.

Costs
Whilst we have tried to keep prices down, and as we succeed in more cost-cutting we shall push the extra funds back into improving the magazine, the first three issues will be run to the following costs: (applicable to UK subscriptions only)
price of publication 50p
production costs 20p
distribution costs 20p
this leaves 10p to be re-invested in the magazine

Circulation
I am primarily concerned with getting the magazine up and running and improving the editorial content and production routines.
The first three issues will therefore have a low average distribution of just 15 people. We should then be ready for a distribution drive to push the magazine's circulation to 100 people per issue, then in the next three months to 500 people. In a years time we hope to be reaching over two thousand readers every issue.

Subscription Rates
All prices are in uk pound sterling.

1 Trial Issue 5 issues 10 issues

UK mainland 0.50 N/A 5.00
Rest of Europe N/A 4.50 N/A
USA and Canada N/A 7.00 N/A
Other countries This will need to be calculated - please contact me immediately.

(European rates are applicable to residents of European countries, as defined by the British Royal Mail, except countries with additional customs procedures.)

Matthew Townsend, 117 Oakridge, Y Ddraenen, Caerdydd, Cymru CF4 9BY, UK.
there@dial.pipex.com
mabb23@dial.pipex.com.

IC Magazine Subscription Application Form
All prices are in uk pound sterling. See IC Magazine Details leaflet for more information.

I would like...
{ }1 trial issue (UK) 0.50
{ }10 issues (UK) 5.00
{ }5 issues (Europe) 4.50
{ }5 issues (USA and Canada) 7.00

Please tick appropriate box and enclose payment. Payment should be made by cheque or eurocheque for UK pound sterling to Matthew Townsend - address at top of page.

Name:

Address:

Postcode:

Telephone number (optional):

Email address (optional):

Web site (optional):

Sorry if international prices seem extreme compared to the uk
subscriptio n rate, but this is due mainly to the air mail postal rates.
Whether or not you decide to subscribe, feedback is always welcome.
Currencies other than UK sterling will not routinely be accepted, although
this is negotiatable.

I'm also sorry that I can only offer subscribers outside of the uk
subscriptions for 5 issues. This is because, in the possibility of
the magazine folding (which must be considered after watching the failures
of many other Atari publications recently) it would be awkward to make
refunds to people around the world.

Please note: we reserve the right to refrain from publishing any issue
without prior notice and in this case refunds would be made to a sum that is
seen as appropriate by the publisher. In other words, this magazine needs
your support or it won't get off the ground. Hope to hear from you soon,
thank-you.

2712. Small Atari auction - two days left

****
*** MAJOR UPDATE ***
****

I have recently had two 'buy-out' offers to take a big chunk of the auction off my hands in one shot. One guy wanted the TT and a video card, the other wanted both of those plus the scanner. The offers were higher than the combined bids on those items so far. These buyers are not interested ingetting item A without also having item B to go with it, so...

I am adding a section for buy-out bids. If the seperate bids for those items is LOWER than the buy-out bid, then I sell them as a paclage. But if the individual item bids are higher, then I sell off the individual parts. Buy-out bids are listed at the end of this post.

Auction rules -

Bids will be accepted until Saturday, November 16th. At that point the auction will go to a "going once, going twice" format, with updates sent by e-mail to all participants. The auction will end NO LATER THAN Thursday, November 21st (Turkey Day). If there are still competing bids for an item when I check my e-mail that morning, the highest bidder in my mail box gets it. Bid increments are a $1 minimum.

ALL PRICES ARE IN U.S. DOLLARS!!!

Shipping to be paid by buyer. All items shipped COD.
(I will pay COD charge, since I insist on shipping that way.)

-=-

Item #1 - Atari TT030 workstation

4 megs ST RAM
TOS 3.06 ROMs (USA)
720K floppy drive
120 meg hard drive
Long-range printer port modification
Revision H motherboard (will accept CaTTamaran 48Mhz upgrade)
Includes AtariWorks, Civilization, and a few misc. games

This system was formerly used to control an automatic embroidery machine, which is why the transmission distance on the printer port was boosted (sorry, but I don't know what the actual range is). The floppy drive is actually a 1.44 meg mechanism, the system lacks the

Ajax driver chip required to do 1.44 meg read/write operations. (BTW - Toad sells these chips for $40.) Keyboard & mouse included. Has been packed away in my closet for some time, so clock battery is probably dead.

Current bid: $200 by ghaddrel

CLARIFICATION - I cannot verify if the floppy is really a 1.44 meg mechanism. That is merely what I was told when I bought it. I do have a spare 1.44 meg floppy drive that I will include at no extra charge, just in case the drive turns out to be 720K after all.

-=-

Item #2 - AlberTT VME graphics card (x2)

1024x768 w/ 16 colors (compare to TT medium res of 640x480)
VGA output (48 Khz horizontal scan rate @ 1024x768)

This card requires a minimum of 4 megs ST RAM to operate. I have two of these, so the second highest bidder gets the other one. They should be compatible with just about any GEM program that recognizes the TT video modes. (I gotta admit, I have not tried them with anything - my monitor went on the fritz right after I got the cards so I haven't hooked them up. They do work, though - saw them tested before I paid for them.) I have no idea if it will work on a Mega STe.

Bid on card #1 - $40 by Marvin
Bid on card #2 - $40 by ai066

-=-

Item #3 - Hand scanner w/ Touch Up software

400 dpi scan resolution
Cartridge port interface - no SCSI hardware required!
Includes Touch Up edting software

Everything works great in this package, and the scanning/editing software, Touch Up, is a fantastic package. Will work with any ST, STe, TT, or Falcon. In their most recent catalog (95-96) Toad sells a similair scanner for $109, plus another $39.95 for the software.

Current bid at $30 by dooley

-=-

Buy-out bids -

TT030 + one video card = $275 by smokin

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

> 68040 @ 66MHz (Medusa) : 22
> 68060 @ 50MHz (An Amiga) : 100.16

Well, I know this is rather pointless, but here we go.

Falcon030 16 MHz: 7 Mips
Falcon030 24 MHz: 11 Mips
Afterburner040 32MHz: 32 Mips
Afterbruner040 40Mhz: 36 Mips

:-)

To get more info, take a look at the Afterbruner040 pages at:

http://rand.thn.htu.se

We will include tables for FX-Falcon as well when I get them.

I have not been able to get it to work either and I too am pretty sure that
all of my configuration is correct. My ISP is The Ohio State University, what
is yours? I don't think it is the ISP that is the problem. Has anyone been
able to get on-line e-mailing in CAB to work?

> the latest????? I've got THREE different ones.

Finally, somone else with the same problem, but I think I have it figured out!! :) It happens if you use any program that uses the DSP (JPEGDSP also, which doesnt use JPEGD). If you load a JPEG when you first boot, and it locks, reboot and do it again. It will work, for the rest of the time you are using the system. Why? I'm not sure... maybe somethings not being initialized or it has something to do with memory allocation.. I just wish it would work. Otherwise, I can't play MPEGs, view JPEGs, or do anything else with the DSP without worrying..

Actually, Clancy used to be featured in Macintosh advertising in the
late 80's, early 90's. I think he was in that "What's on your
Powerbook?" series.

Probably out before it's time like all Atari products. HP came out with palmtop PC's which sell between $200-$300 I think, and they are basically the same type of machines as the Portfolio but smaller. They even had articles about it (portible computing) in the old Current Notes issues. I rather that than to lug some stupid ol' laptop :)

I think JTS is licensing Atari technology to companies that can make use of it. I know they do this with older games like Tempest.

[Now we get the the thought provoking statement.]

MagiC is supported by an active developer who has pride in his work and
doesn't charge people $35 to report a bug. OTOH, Win95 aka Mac86... Well,
it's from the man who thought US$500 was a reasonable price for a BASIC
interpreter, and threw public tantrums when someone else wrote TinyBASIC and
sold it for US$5.

Both, actually. It's usually a motherboard jumper, though. Should be
simple enough to locate the +5v traces on the AB daughterboard and clip
them, stick a +3v regulator chip in there - it's a little 3-pin
transistor-looking thingy with a "heat sink tab" and you almost surely would
need a heatsink, but in theory...

Will slowing the clock speed down to 8 Mhz overcome this difficulty?
If not, does this mean that all software that uses the cartridge port on an ST or STe won't work on a Falcon? I also heard that the address of the port is different on a Falcon versus an ST. True or not?

Actually the HP Palmtop supports VGA graphics and has other niceties such as an infrared port that go beyond the Portfolio. But it did come out considerably later than the Portfolio.

MULTISYNCH MONITORS
COLOR AND HIGH RESOLUTION MONOCHROME
DISPLAY FOR THE ATARI STs

COLOR BETTERS THE ST'S SC1224

Most multisynch monitors, but not all, will work with the
ST's RGB output and vertical refresh rate. Advantages are
operation in high resolution monochrome and both low and medium
color using a single monitor. An additional advantage is the
better color rendition with more differentiation in tonalities.
Subtle shades are better represented than on the ST. With Sony
color monitors, the colors are Kodachrome in quality -- rich
and saturated. On the negative side, none of these color
monitors will match the sharpness of the Atari SM124 monochrome
monitor. This monitor, as with other monochromes, uses single
pells or pixels to represent screen images. Color monitors
must use three (Red, Green, and Blue) to form the same point on
a screen. As a consequence, they cannot give the crispness and
detail.

THE CRITICAL TEST -- MONOCHROME SHARPNESS

If you use monochrome most of the time, as many do with
Spectre Macintosh emulation, the major question is whether or
not a softer and coarser monochrome display on a color monitor
is acceptable for continuous use. It doesn't make sense or
cents to buy one of the lower priced multisynch monitors as an
economy measure just to obviate the need for two monitors where
high resolution monochrome is important. And the purchase of a
higher quality and higher priced monitor in the $600 to $650
range -- such as the Sony 1304 HG or NEC 3D may not make much

economical sense either. However there are those who continue to have the desire for these types of monitors -- unfortunately, I am one.

MONITOR SWITCH BOX -- ROLL YOUR OWN

The following pages give pinouts and wiring diagrams for construction of a Monitor Switch Box so that a multisynch can be used in both color and monochrome with the ST's monitor output. The box is needed to ground the Monochrome Detect line from the ST and force it to boot in high resolution monochrome. It also switches from the ST's RGB color output to Monochrome Intensity output to drive the monitor. The pinouts for all three Sony monitors (1302, 1303, and 1304) are the same. NEC monitors such as the Multisynch and Multisynch II use the same pinouts. Where Sony and earlier NECs use DB-9 inputs, the new NEC 3D uses a DB-15 connector. The NEC pinouts shown are still valid for the 3D. A converter cable -- DB-9 to DB-15 supplied by NEC -- will give the proper interface. This converter is also availabe commercially as a one piece plug unit. Other monitors, such as the Mitsubishi Diamondscan, use different plugs. The Mitsubishi uses a DB-25 which is the same in pins and shell as an RS-232. The ST's output can be routed to these monitors with the proper pinouts and plug.

The Monitor Switch Box can be wired for any monitor output configuration. If another monitor is used, a simple conversion plug is comercially available to reconfigure outputs if both monitors use DB-9 plugs. If plugs are different for two monitors, then wire a cable with the two different terminations. The least effort and highest cost approach is to buy a cable with one of the plugs already made up. If you are good with a soldering iron, then buy the connectors and makeup your own cables. The ST 13-pin DIN plug is not that easy to work with. The solder or rear side has pins just like the front, and soldering wires to these contacts is not a snap. ST monitor cables, with a DIN 13 male on one end and unterminated on the other, are available from two or three sources. Try Best Electronics or Practical Solutions. A 4-pole, double throw switch (On-On) will be required for the Box. Also fit the Box with an RCA jack if you want sound routed to a stereo or self amplified speaker like those available from Radio Shack. If you have Tweety Board, this will not be needed.

MARKET FAILURE OF SWITCH BOXES

There have been several attempts to market these monitor switch boxes, and all but the most recent have not met with success. The first reason is high price. The first box produced was overpriced in the $200 range. The second reason is differences in pinouts and plug configurations for the variety of monitor inputs. There is no standard. The third

reason for lack of success is the small ST market for alternative multisynch monitors.

Making your own box for $35 or less in parts will give you an opportunity to try out several monitors at a dealer and select the one that is most acceptable for high resolution monochrome display. But a problem is that most dealers don't have the more expensive monitors broken out for display, and you may not be able to give one a try. Be persistant. Ask the dealer if he can recommend a customer that has a monitor you are interested in. But by all means, try before you buy to insure that the display meets with your satisfaction. Don't take the word of others because each has different levels of acceptability.

MULTISYNCH MONITOR PERFORMANCE

I have tried the homebrew Monitor Switch Box with the Sony 1303 and the NEC Multisync and Multisync II. The 1303 is not the quality of the 1302 which has a finer dot pitch. However, the color was excellent but the monochrome display was soft. The Sony 1302 has a .26mm dot pitch. This is a measure of the center-to-center distance between dots and is also an indicator of dot or pixel size. Until recently, the 1302 had the finest dot pitch of any color monitor on the market. And dot pitch is a better indicator of sharpeness than horizontal and vertical lines of resolution. The lines are also a function of screen display size; so don't be mislead by more lines resolution. It simply might correspond to a larger monitor display size. And as the monitor size increases, the dots are made larger and render a less sharp display.

But Sony is less than forthcoming in its specifications for the 1302. While touting the .26mm dot pitch, they don't publish the fact that this applies to horizontal spacing only. The vertical spacing is different, perhaps .32mm which is nothing to shout about. As a consequence, you may see black horizontal lines that separate the color display lines. They are not dramatically obtrusive, but they are there. On the plus side, the Sony's have that superb Kodachrome color that is richly saturated. The blacks are black, and the background in monochrome is absolutely paper white. The 1302 is satisfactory for ST monochrome use.

This model is being superseded by the new 1304 HG that has a .25mm dot pitch. The specifications on this new monitor closely match those of the Apple Color Monitor for the Mac II. This monitor is made by Sony to Apple's specifications, but it is not multisynch. I use one on a Mac II and it is excellent in both monochrome and color. Because of the closeness in specifications -- the only two monitors available with a .25mm dot pitch -- I strongly suspicion that they are the same. Sony

has simply adapted the Apple version for multisynch use. And if I were to place my money on a monitor that would be highly acceptable for monochrome display with the ST (sight unseen in an actual test), it would be the Sony 1304 HG. When viewed in color on an IBM PC, the dots appeared extremely fine and it appears that the .25 pitch holds true for both vertical and horizontal.

The 1303 is not as good as the 1302 or 1304. However it did give a good monochrome display that was similar in size to the ST's color display in medium resolution. Although good, it does not come close to matching quality of the SM124. Since I spend at least 60 percent or more of my time in Spectre/Macintosh operation, I felt that this was not acceptable for my requirements. When switching from color to monochrome, the screen picture sizes must be readjusted. When the color picture fills out the screen, the monochrome picture will be half screen size until it is adjusted. The Sony controls are in the rear, making them very inconvenient for this operation. The NEC and NEC II have their controls on the front. When making adjustments, insure that horizontal positioning is correct. When first tested, the NEC seemed to have ghosting with the character display. However this was because the screen had wrapped around and required proper positioning. The NEC display was also good. But it was not the equal of Sony in color -- more pastel and less saturated.

Both the Sony 1304 and NEC 3D now have automatic screen sizing when displays are changed; so this should eliminate annoying adjustments. Additionally, both are improved over earlier models. Both would perhaps make acceptable choices for monochrome use on the ST. But I would still think that the Sony 1304 would win by more than a hair if it is anything like the Apple Macintosh monitor. Perhaps a dealer will break one out for testing when they become more plentiful and prices drop.

Sony 1304s are discounted for around $645, and 1302s for $575. NEC 3Ds are lower priced at $585. The Mitsubishi Diamond scan can be found at $499 and sometimes lower. If the 16" Nano FlexScan is a true multisynch, those who want everything can get it for just under $900.

EDITOR'S NOTE: These prices were for new monitors in 1990; you should be able to buy any used monitor for well under $200 in 1996.

The following should get you started on a switch box so that you can perform your own acceptance testing. I have not tried a Princeton Graphics or Mitsubishi Diamondscan since I felt that their displays with the IBM PC were not the match of the Sony or NEC. It wasn't worth the money or effort for such a change, and a promise was made a long time ago not to

compromise and throw money at something you wouldn't be
satisfied with. Climbing out of that hole is too costly, and I
have paid this price in both camera and stereo equipment -- but
never again.

PINOUTS FOR:
ATARI ST MONITOR DIN 13

Vertical Synch 12 9 5

Ground 13 1 6, 7, 8, 9

NOTES: Sony 1302, 1303, and 1304 use the same pinouts.
The above can be used for the NEC 3D with a DB-9 to DB-15
conversion cable supplied as standard with the 3D.
ST 13-pin DIN cables with male DIN and unterminated at the other
end and DB-9 plug/unterminated are commercially available.

EDITOR'S NOTE: Try Best Electronics in North America - or, if you have a broken SC1224, "steal" the monitor cable from it. You will need to add a couple of extra wires for monochrome use in that case.

The NEC DB-9 to DB-15 converter can also be purchased seperately.
If problems are encountered with the NEC 3D, try disconnecting
some of the grounds on pins 6, 7, 8, and 9.

This plug is available in most electronic supply stores. One end is DB-9 Female for connecting to the box's output cable, and the other end is DB-9 Male that plugs into the Monitor or the DB-9 to DB-15 cable for the NEC 3D. The converter has a small printed circuit board with jumper wires to make the proper input/output configuration. The pinouts shown above are for a switch box wired for Sony output and their conversion to output configuration for a NEC monitor.

Center poles of switch (labeled as RED, GREEN, and BLUE OUT)
are common output to the Sony monitor through the DB-9
connector. When switch is thrown to COLOR side (lower contacts),
the ST's RGB output is fed to the common output center poles.
Monochrome Detect has no output in COLOR. With the switch thrown
to MONOCHROME (upper contacts), Monochrome Detect is grounded and
Monochrome Intensity is fed to the three RGB outputs. Horizontal
and Vertical Synchs are fed straight through from the ST to DB-9
connector. Thanks to Mike Odegard for the original circuit in
file #5617 uploaded in January 1988. It works much better than
my circuit that didn't use resistance.

I have had this problem also. Do you have a copy of the latest
Esscode program? It does MIME. You basically run the MIMIE decode
option, pick the MIME file to decode and then pick the destination
file. It worked for me.

Is there any software that will support a voice mail feature on the Atari
computers? I may think of getting that. I don't know about a "smart
modem" like that though.

Yes, it works. I have only one problem with e-mail.

I have two different providers.

E-mail only works with one. I think it is a problem of the provider
not of STIK/CAB

I'm waiting to hear from a friend whether he got an email I sent while viewing his home page
using CAB last night. Everything seemed normal, and when I hit the "SEND" button, I got no error
messages. Of course, I also got no message saying that the post had been sent...don't know if I
should have expected one of those. The setup is: CAB1.5, STiK 1.08, the CAB.OVL that came with
WWW130, a 2.5meg ST w/TOS1.04 and a Supra 9600 baud modem. So we'll just have to see.

Anyway, this is with a University of Wisconsin-Madison account that already works with Antmail
0.7.9 (which is written by Dan Ackerman, who I believe has an Ohio State email address too).
Have you used Antmail successfully?

Correction, please: The above is a tertiary address, at best.

The following email addresses are in order of preference:

AtariComputing@atarinet.portland.or.us
RichT@atarinet.portland.or.us
atari@teleport.com
ataricompusa@freemark.com
RichardX_Tietjens@ccm.jf.intel.com

Note that the Intel address is checked weekdays only, and the Freemakr
account is checked once daily. The others are checked at least twice daily
(more often as time permits).

CAUTION: I don NOT have the pinouts for either chip. My conjecture was
ONLY for modifying the suppky voltage - pinouts are at this time WAY outside
my area of interest.

That's true, but all you need do are copy (in this order) DRVIN.PRG and
SCC.PRG into your AUTO folder.

>...after installing the newest version, CAB tells me "read error on file /"
>no path, no filename, nothing! This is so frustrating!!!)

Find your WWWCACHE folder and look at the contents; there should be a
zero-length file named something like CABCACHE.xxx - if it's missing, start
CAB while you are off-line, pull down the config menu, make sure your cache
path is set properly, save the prefs, and then clear the cache. Exit and
restart.

>Following up my own message, I actually managed to get STiK to dial
>after hours of troubleshooting. Seems the modem was not responding
>to the init string under the normal entry in the STiK setup.

Sounds like an older version of STiK.

HSmodem will fix the port speed problem, BTW.

>I connect, it makes zero difference if I have the correct
>user name and password entered. I can enter complete garbage and it still
>thinks I am making a good connection. The script seems to be correct, it is

>believe it or not!). 3) Nothing works, not CAB, not AntMail, not nuttin'.

Is your account plain, uncompressed SLIP? PPP won't work, and neither will
CSLIP; the VJ flag must be set OFF by your ISP.

(Re: gateway address)
>How can STiK possibly work at all without this setting???

I've set STiK up for at least 4 local ISPs and never needed a gateway
address - thought it was only needed for email, actually, and have never
bothered with it except when using a direct NOS connection.

>Any help would be useful.
>
>a) how do I get more than 19,200? I downloaded hsmodem, but the
>instructions are unusable. (running it seems to do nothing)

See install instructions above; be sure you set your port to MODEM2 or
SERIAL2 rather than AUX or MODEM1 since that is limited by the BIOS to
19200.

>b) has anyone gotten STiK to work with TIAC? if not, why? if so, how?
>
>c) Has anyone gotten Netcom and STiK to work together? how?

I don't beleive Netcom offers SLIP.

>d) Anyone got a handy login script for a decent nation-wide ISP you could
>post???

You can have decent, or you can have nation-wide. I am blissfully unaware
of an ISP who is both.

>e) Why am I up so late?

Too much coffee?

>Thanks in advance. Oh, I'm on a 14mb Falcon (clabs) with

Unless one of the HA's has a problem of its own, I see no reason to think
two would cause any problems. My MSTe has the internal Atari host adapter
and an AdSCSI+, and from time to time has had a Berkeley Systems, a Supra,
and an old ICD hooked up as well. As long as proper device ID numbers are
observed, no deleterious effects should be noticed.

BTW, Tom, glad you're enjoying the drive!

2747. AC Press Release - update

Newsgroup: comp.sys.atari.st
Date: 1996-11-15 00:00:00 UTC
From: cgood@cix.compulink.co.uk
Message-ID: <E0xLnM.BMp@cix.compulink.co.uk>
Source record: 133876

Sorry for yet another update. This time some of the subs details that were missed out have been amended. The previous 2 versions have been withdrawn. Apologies if you've downloaded all 3.

Press release 15 November 1996
==========
Mike Kerslake, a magazine publisher with over fifteen years experience has teamed up with Joe Connor, ex Reader Disk/Public Arena editor for Atari World to create a NEW printed Atari magazine called Atari Computing.

The first issue was launched at the recent Atari shows in London and Birmingham and completely sold out both days! Delighted by the response we've reprinted Issue 1 so if you want to get your hands on this collectors item and join the queue for Issue 2 you need to move fast.

Issue 1 featured contributions from respected and well known Atarians including Graeme Rutt, Jon Ellis, Nial Grimes, Mark Baines, Denesh Bhabuta, Kev Beardsworth, Colin Fisher-McAllum, Harry Sideras, Howard Carson, Xav, Carl L�fgren, Thomas Binder, Al Goold, Chris Good, Ed McGlone, Roy Goring, Neil Martin, Richard Spowart, Chris Holland and Steve Llewellyn.

We've also signed a deal with the two leading disk based magazines, AtariPhile and Maggie to publish regular sections within the magazine. If you've never seen a disk magazine before we think you'll be amazed to find out how much you've been missing!

The Atari Computing launch issue included
---
* News and gossip put together by Graeme Rutt.
* Reviews:
HD-Driver - by Jon Ellis
Deadlands - by Nial Grimes
Kandinsky v2.5 preview - by Kev Beardsworth
E-Copy - by Colin Fisher-McAllum
CoSTa - by Neil Martin
MagiC v4 - by Kev Beardsworth
MagiC v5 preview - by Thomas Binder
* PD/Shareware reviews of AudioCreate, CPU MOD, Pysgham, Start Me Up!, ST-Guide, The filler, CoMa, AppLine, Graph, STD Codes, Maggie 20, Croft Soft Newsletter, 7up, Warp, Maggie 20 and INcontrol reviewed by Joe Connor, Denesh Bhabuta, Carl L�fgren and other reviewers.
* Features:
Music and MIDI primer - by Ed McGlone
RSC file editing - by Mark Baines

NeST primer - by Harry Sideras
BBS primer - Colin Fisher-McAllum
DIY project to add joypad to STe - by Xav
Hard disk primer - by Howard Carson
* User group reports co-ordinated by Al Goold
* Guest sections:
AtariPhile
Maggie
Calamus User
* Reader disk including ST-Guide, MagiC utilities and GEMTrek
* Letters, obituraries for Atari, ST Format and Atari World
* Q&A section, our team of experts are kept busy!
* And there's more!

Background

Following the closure of Atari World earlier this year it was announced ST Format, the last surviving UK newstand publication, has also closed. It's the end of an era in the UK which for the first time since 1987 has no Atari newstand presence.

The men in grey suits are telling us to move onto other platforms but hang on a minute, let's take stock of the situation...
- Atari machines can be purchased and repaired on a shoestring
- Atari machines can produce superb printed output
- Atari machines can surf the Internet and run BBSs
- Atari machines can form the nucleus of a digital music studio
- New software of better quality than ever before is still being released!

That doesn't sound like a dead platform! The Atari platform has been emulated by just about every other platform, we're owners of cult machines! Have you ever noticed ex-Atarians animatedly talking about the 'Good old days' it's a feel good factor missing from all the current machines.

We don't need a new platform but we do need information and a printed magazine is undoubtedly the best way to ensure we see in the millenium!

Apart from a darn good read the other thing most of us like is some new software to play with. The Reader Disk concept offers all readers the chance to get their hands on the hottest new software around along with exclusive versions not available anywhere else. We intend to offer one Reader Disk to accompany each issue, buy it or not, the choice is yours!

What we need, now more than ever before, is your support. It's going to be tough to keep going so we're initially planning bi-monthly releases -but this could change, it's really up to you! Instead of wishing us luck post a cheque to order your copy today!

Ordering
==========
As we're sure you'll appreciate launching a new magazine is a risky

business and our print run will be conservative - we don't expect to keep a stock of back issues for long.

We're not a newstand publication so don't bother looking in the shops. The Atari platform needs this magazine and we need your subscription so do yourself and us a favour, take out a subscription or order an evaluation copy today!

Subscriptions

Many of you (and most of us) lost money following the Atari World debacle and we're determined not to make the same mistake. Atari Computing subscriptions are refundable at any time. Cancel your subscription in writing and we'll return any outstanding credit to you, minus a deduction to cover our costs.

Atari Computing Issue #1 Reprint update
****
Just to clarify matters, here is the official statement from the
subscriptions/distribution part of AC magazine:

As many people know, issue 1 of AC sold out at the Atari shows in
September. All people who's order/payment had been received by us
before the show weekend either picked their copies up in person, or
had them despatched to their home addresses early the following week.
These people were guaranteed a copy, and they have now received them.

Due to the overwhelming number of orders for issue 1 which we received
after the show weekend, and were unable to meet, we decided to do a
reprint. This reprint was not economically beneficial for us, but we
knew the disappointment that would be caused if many people didn't get
a copy of issue 1, therefore we decided to reprint.

Unfortunately the printers were not able to do the reprint
immediately, and it was only recently that we received the reprint of
issue 1. Since then we have had to process many more names and
addresses and payments (many of which were unfortunately incorrect due
to confusing/unchecked info published by other organisations).

However, the good news is that all of the reprinted copies have now
been despatched.

All people who's order was received by us at either the Troon or the
Sheffield address by last weekend will be guaranteed a copy from the
reprint. However, we have now, effectively, sold out of issue 1. Any
orders received on or since Monday 4 November will have their
subscriptions, or requests for evaluation copies, started/met with
issue 2, which is due out in early December.

Subscription Payments:
****
These payments should still be made to the address published on
subscription forms, which are available via email or snailmail

About the magazine/Who are we?

Atari Computing is financed by the Atari Computing Group, based on CIX, and dedicated to supporting the Atari platform - We're delighted with the response to Issue 1 and working hard on Issue 2!

In case anyone is not sure about the status of Atari Computing, it is an enthusiasts' magazine compiled and distributed by Atari enthusiasts. Unfortunately, we don't have the resources of a 'full-time' publishing company, so all our efforts must be directed to getting the magazine out every two months, rather than try to run an Atari 'helpline'.

Our apologies for the delay in sending out the reprint copies, but there's only a very small group of volunteers doing the work in their spare time, and we've been a victim of our own success!

Who said the Atari scene was dead!

Best wishes

The Atari Computing Group A|C|G

Chris

No jumpers? I suspect you'll have to modify the cable, then, or make a
kludge cable. Get a standard PC floppy cable with female headers for 2
drives and a double-male 34-pin header. Plug the header into the end of the
cable that's on your ST motherboard. Plug the single female header from the
new cable into the male header, and then plug the connector that's past the
twist in the cable into your new drive.

What's happening is that your ST is looking for A: but the drive you have
put in thinks it's B: - and the ST won't work with a B: and no A:.

2756. Announcing PhotoScan

Newsgroup: comp.sys.atari.st
Date: 1996-11-15 00:00:00 UTC
From: sdelaney@steil.wintermute.co.uk
Message-ID: <847287094_OASIS_NEWS@steil.wintermute.co.uk>
Source record: 133885

```
**************************************************
* Introducing PhotoScan *
* Floppyshop's NEW Photographic Digitising Service *
**************************************************
```

Floppyshop are pleased to announce PhotoScan, a low cost photographic digitising service for those of you who do not have CD-ROM drives and are therefore unable to make use of Kodak's PhotoCD technology. PhotoScan was originally intended solely as a service to Positive Image users who did not have scanning facilities. However, we recognised that Atari owners have a need for this type of service in other areas including Desktop Publishing, and of course everyone wants to make up slideshows featuring their favourite holiday snaps.

All you have to do is send us your snaps (along with the appropriate fee) and we'll put copies of them onto floppy disks in both 256 colour and True Colour formats. Be warned, a full size 6"x4" print saved as a 256 colour image requires 528K of free RAM to reload and a True Colour JPEG of the same image will require 1.55 Mb of RAM when decompressed. For this reason, you will need at least 1 Mb of RAM in order to use the 256 colour image and at least 2 Mb for the True Colour one. In most cases, the 256 colour images are almost indistinguishable from their True Colour counterparts, use them and save memory. All scans are created using professional scanning equipment and calibrated using Kodak's proprietary high precision colour match software.

ST owners should not be put off by the mention of 256 colour images. GIF images can be viewed on an ordinary ST/STe in full colour using either Speed Of Light or PhotoChrome, two Shareware packages available from Floppyshop. In addition, the images can be easily converted (including resizing and colour reduction if necessary) to any other format you require using such packages as GEM-View, Look 'N' See, Bitmap View and a host of other Shareware file conversion tools, all of which are available from Floppyshop.

Ordering Information
****

1. Maximum size of photograph is 6"x4" (but see 9 below).

2. If your photographs are particularly valuable we suggest that you send them to us by registered post. If you want your goods returned by registered post, this will be charged at cost (see below) and is in addition to the stated P&P.

3. This is a digitising service not a photo retouching one! The disk images you receive back will be a close match to the print you sent us (blemishes

and all!).

4. All material sent to us for scanning must be your own work or you must enclose written permission from the copyright holder to reproduce his/her work. We will not scan material taken from books, magazines or indeed any material protected by copyright law. If you use our service you agree to indemnify Floppyshop against any claims arising from breach of copyright as a result of us duplicating any material on your behalf.

5. We can digitise images from prints, negatives or transparencies.

6. Your photographs may be colour or black and white. In the case of black and white prints, the disk images will be saved as greyscales. If your photograph is in colour but you prefer a greyscale scan (eg; for use in a DTP package) you can request this as an alternative to colour.

7. 256 colour images will be supplied in GIF format unless you specifically request otherwise. The alternatives on offer are TIF or PNG. There is no choice for True Colour images, these can only be output as JPEG due to their sheer size.

8. Please ensure that you send your photographs to us in appropriate packaging designed to protect them in transit (hard backed A5 size envelopes are recommended for this purpose). We can take no responsibility for goods lost or damaged in the post on their way to us. It is your responsibility to ensure that your photographs reach us in good condition.

9. If you need larger photographs scanned or particularly high resolution scans for professional reproduction work, we can handle up to A4 size at up to 1200 dpi but the files will be massive and you will have to send us a formatted EZ-135 cartridge to put them on! We will need to discuss your exact requirements in these cases and will give you a quote before commencing work. If you require this service please call Steve Delaney on 01224 586208 Tues, Wed or Thurs between 9am and 4pm. Or you can email me (sdelaney@steil.wintermute.co.uk)

10. We have demo disks available which illustrates the sort of quality (dependent on the quality of your photograph of course!) you should expect from our service. Just order the PhotoScan demo disk. It costs 1 pound and is available for the ST or the TT/Falcon. Please state which computer you own when ordering. The demo files are also available by ftp. Here's how to get them:-

ftp ftp.wintermute.co.uk

Log in as ftp or anonymous and use your email address as your password. Now change to the correct directory as per below:-

cd /home/s/steil/outgoing/

followed by dir to display the directory.

The file you require will be foto_st.zip or foto_030.zip as appropriate. Just type:

get foto_st.zip

or

get foto_030.zip

to download the appropriate file.

** You can also download them directly from our Web site by selecting the option to download the Positive Image demo from the title page. This opens up the directory which contains all Floppyshop downloadable software. The url address is:

http://www.netkonect.net/flopshop/

Pricing
****
Due to the setup time involved we regret that we cannot handle orders for less than three scans. The charge per scan (up to 6"x4") is 2.50 pounds. There is a fixed P&P charge (1.25 pounds UK, 2.25 pounds Europe, 3.00 pounds rest of world) per order regardless of order size. If you wish your goods to be returned by registered post, please add the registration fee (currently 2.70 pounds in the UK, overseas customers contact us first if not paying by credit card) onto the above. Please note that the P&P charge is in addition to that for any software ordered at the same time as photographic orders are despatched separately. Usual turnaround on PhotoScan orders is 7-10 days.

Disclaimer
****
Although every care will be taken with your photographs, we can accept no liability for loss or damage to your property however caused. Our liability is strictly limited to the cost of your order. Receipt of your photographs by us for digitising implies your acceptance of this disclaimer.

Placing Your Order
****
All orders should be sent to Floppyshop, PO Box 273, Aberdeen, AB15 8GJ, Scotland, U.K. and cheques/PO's should be made payable to Floppyshop. Credit card payment welcome.

Further Info
****
If you require further information, email sdelaney@steil.wintermute.co.uk

From: mdf16@zimmer.csufresno.edu
Message-ID: <56ijrl$55d@shadow.CSUFresno.EDU>
Source record: 133889

Does anyone know if someone is planning on making an '060 card (similar to Afterburner, only with the new CPU) for the Falcon? From the MIPS specs I've seen, this chip rocks!!!! I was thinking about eventually getting an Afterburner (when I get rich enough), but an '060 would be well worth the wait! Someone said the Phoenix will have a 120MHz 68060? How many MIPS is that? I know nothing about how MIPS is calculated. Would that just be 2x the speed of a 60MHz 060? That would make the 120MHz 060 a 200+MIPS CPU!!! WOW!!!! That'd be awesome!!!

Actually, this can already be done without AV Protocol.

What AV_START does is let an application tell the desktop (or AV server)
to open a file. This might be an application, in which case it would be
executed, or if it was a non-executable file, it might be loaded into
a suitable viewer. Just whatever the AV server thinks is the right thing to do.

>
>Mike

The 060 is indeed bus compatible with the 040. The F-Line call is
different as you noted, however, there are unimplemented interrupts
in the 060 that have to be handled as well.

Other than that, there would not be much expense involved. The 060 is
not that much more $ than an 040.

All the best,
Chris @ Computer Direct

Hi there...

Brian Roland (bjr@edison.ebicom.net) wrote:
: What is the MOV format?
: Any Atari progs that will display them?
: If so...where can I get it?

MOV usually refers to Apple QuickTime format. These are usually video files with sound, but can also be MIDI and other stuff.

If you have a Falcon, or TT with graphics card, then M-Player will possibly play them. You will also need LOTS of RAM if you want to hear the audio that accompanies the video data. The player is pretty slow, and drops a lot of frames in order to keep up with the sound, but it is almost our only option for playing QuickTime movies. It also does Windoze AVI movies and FLI/FLC/FLH animations.

Sadly you will only need a slow Mac to play QT movies at MUCH better quality, so this isn't really what I consider to be useful for Falcon owners. DSP use is a must...

Taneli Mielikainen (Taneli.Mielikainen@club.mpoli.fi) wrote:
: How fast is 56001(32MHz), 68000 (8/16 MHz), 68030 (16MHz) and 68060 (60MHz)?
: (MIPS,FLOPS, or compared to quite fast Pentium)

I will quote these figures in MIPS...

DSP 56001 (32 MHz) -> 27 MIPS
MC 68000 (8/16 MHz) -> 0.8/1.6 MIPS <- This could be wrong
MC 68030 (16 MHz) -> 3.84 MIPS
MC 68060 (60 MHz) -> 110 MIPS

As far as I know, a Pentium133 is 85-90 MIPS.

The Pentium has partly a 64-bit internal architecture whereas the 68060
is entirely 32-bit (please tell me if I'm wrong). Looking at the MIPS
rating you can see that the 68060 will make a Pentium at the same clock
speed look slow.

Please note that it is dangerous to quote MIPS as I have here. The best
way to measure performance is in how much one enjoys using their
computer. My Falcon030 then performs better than ANY PC or Mac!! :)

M-Player works very well in playing AVIs and MOVs on a TT030, equipped with a
Cyrel, Sunrise graphics card. This is a great piece of shareware. The check
is in the mail for this one.

Thats' an idea. Not sure that it's that easy to locate the traces and cut them,
but it should be possible.

So the 060 is 100% pincompatible then? You don't need to change anything except
5V to 3V?

Anyone who has done it? :-)

Bus compatible? Not pin compatible as well?
Are these interrupts connected to pins or is it software controlled?

> Other than that, there would not be much expense involved. The 060 is
> not that much more $ than an 040.

You doesn't happen to know if it would be possible to put a 060 on the AB040
without to many modifications?

Regarding price, the 060 is two times the price of a 040 if you buy it
at Falcon Pro Center in sweden...

You need to put STIKTSR.PRG in your auto folder and edit the configuration files:
DEFAULT.CFG and DIAL.SCR. These files then need to go in a folder called STIK_CFG in the root of your boot drive. Finally, remember you also need STIK.RSC as well as STIK.ACC in your boot-root. The STiK doc might not seem that comprehensive but you'll find all you need to know from the comments in the configuration files. Other questions should be answered by whoever you are using as an ISP. The most important thing you need to know is do they allow SLIP connections - this will let you browse the web, telnet and ftp. If you want to send and receive mail they will also have to provide a POP3 server and an SMTP server.

Hope this helps,

Michael

] >shell account and I have figured out how to decode the UUencoded files
] >but not the Mime format. If any one could help me out I would appreciate
] >it very much. If you could send me the info via E-mail I would be grateful.
]
]
] I have had this problem also. Do you have a copy of the latest
] Esscode program? It does MIME. You basically run the MIMIE decode
] option, pick the MIME file to decode and then pick the destination
] file. It worked for me.

Also note that when uudecoding or mime decoding, the file selector pops up looking for a destination filename. When uudecoding, I have found this needs to be cleared (ie a null target filename), but when mime decoding you *must* have a target filename (I usually use something like test.txt. As I recall the software generates the correct filename from the archive anyway, but if not then change the name if it is a zipfile or binary). In this respect it is not very good interface coding, but it is a good program otherwise.

<trivia mode on>
I think I saw somewhere that the PC version is up to about version 7
<trivia mode off>

Hope this helps.

2774. Starfax, Starcall, Okami, English KGMD - where?

Newsgroup: comp.sys.atari.st
Date: 1996-11-15 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GKPUEGUQUp@tos.ak.planet.gen.nz>
Source record: 133937

I recall recently seeing mention of fax software called Starfax, and a terminal called Starcall.

Unfortunately, the article has expired just when I want to get this software.

In addition, I am looking for Okami. I tried some WWW page URLs I saw posted here in c.s.a.s., but they didn't seem to work. Metacrawler was also unable to come up with a valid URL.

And lastly, I am trying to find the English version of KGMD.

Any help with finding any of these items would be appreciated.

>As far as I know, a Pentium133 is 85-90 MIPS.

Actually Chris...

There is no such beast as a 68060 60MHz. 50MHz and 66MHz only. The 50 MHz is rated at 100 MIPS and 47 MFLOPS. One could also rate it at 150 MIPS if they included the math functions. The 060 is capable of 3 instructions per cycle and one of these instructions can be a math instruction due to the multi processing capabilities of this processor.

We run the 060 at 60MHz in our DirecT60. This gives us a rating of 120 MIPS. (flops rated seperate)

The 060 66MHz would of course have a rating of 132 MIPS. (flops rated seperate)

All the best,
Chris @ Computer Direct

> owners. DSP use is a must...

Ehhh.... are we using the same program? Okey I have a 040 in my Falcon, but
I had no problems what so ever reagarding speed.

Which MOV files have you found that are causing frames to be dropped?
Could you point me to one that is less than 1.4MB so I can get it home
on a disk.

I have only found MOV files which uses 160x80 (maybe a bit higher) and with
sound it plays all frames without any problems at ~6fps. Whitout syncronization
with the sound I get over 30fps.

I can't belive that a 16MHz 030 MAC could do it better! As you said it doesn't
use the DSP so it's a great piece of work and does the job very good indeed.

< English text below >

Hallo!

Es gibt jetzt eine Mailingliste fuer Thing, den alternativen Desktop fuer
TOS-Rechner und kompatible Systeme. Die Adresse der Liste ist
binder@isa.informatik.th-darmstadt.de, mit dem Subject "Thing: subscribe"
und der eigenen EMail-Adresse als erster Zeile des Bodies traegt man sich
in die Liste ein und erhaelt dann naehere Informationen. Wer nicht teil-
nehmen will, kann trotzdem Beitraege schicken (das Subject muss dabei
"Thing: " enthalten), sollte aber dazuschreiben, dass er nicht Mitglied
der Liste ist.

Achtung: Die eigene Adresse fuer "Thing: subscribe" muss im UseNet-Format
vorliegen, also z.B. Thomas_Binder@hd.maus.de, sonst klappt es nicht!

==

Hi!

There's now a mailing list for Thing, the alternative desktop for TOS-
computers and compatible systems. The address for the list is
binder@isa.informatik.th-darmstadt.de, use the subject "Thing: subscribe"
and your EMail-address as the first line of the body to subscribe to the
list; you'll then receive further information. If you don't want to
subscribe, you can still send contributions to the list (the subject has to
contain the substring "Thing: " for that), but don't forget to state that
you are not a member of the list, then.

Important: Your own EMail-address for subscriptions has to be in UseNet-
format (e.g. 12345.6789@compuserve.com), otherwise it won't work!

Ciao

Thomas

Hello,

For a small project i'm planning, i will need to program
some UV-proms (27128/27256) and small PALs. i really would
like to do that with my megaST, that's why i'm looking
for a used Prommer (Junior or other)...i remember the
kind that goes into the cartridge port, but any will do.

Any offer is welcome. based on a reasonable price i can
pay postage from europe or the usa even.

thanks.

fab.

It'll gobble up some of your RAM and, in exchange, give you more
partition identifiers to use if you run out on normal DOS.

JF> either.
JF> There are 3 progs in the packet: CBHD.PRG, CBHD0.PRG and SCSIDRV.PRG.
JF> There is also a SCSI.RAM. What are these good for?

Have you got the .HYP, Jens. It's a bit of a struggle for me as only Deutsch ATM. However, I have tried my best with it and agree that it's all a bit confusing!

Some of the CONF settings are identical to ICD's (FAT/Dir buffers, Additional folders). Others are new - "Active partitions" and "Write Protected Partitions" but are fairly straightforward. I haven't touched the default setting of the SCSI-driver parameters because these might stop the thing working altogether! BUT, it would be a good idea to be able to use these to fine-tune the driver for a particular computer/HD configuration.

OK, a few guesses now :)

CBHD0 - provides the SCSI interface as in the docs. Think of it as an operating system extension.

CBHD - this is the SCSI i/f PLUS a HD driver which hooks into the Atari file system.

SCSIDRV - I think this is identical in function to CBHD.PRG; a SCSI i/f and file system driver which can be installed during normal running (MORE about this later!)

SCSI - from it's size I guess it is the same as CBHD and SCSIDRV in function. Maybe this is the file which is loaded by Mac emulators?

And now one for you :) ......

SCSI.CPX - what on earth does this do? It just seems to call itself v1.00 and offers the option of "Rescan" which does nothing useful. (Ermm ... Claus, HELP!)

>> Here is how I did it - maybe there are some unneccesary steps here
>> but this works:

JF> I followed your instructions verbatim (with CBHD.PRG), but all I got
JF> when rebooting the computer was:
JF>
JF> ----8<---
JF>
JF> [welcome banner]
JF> Initializing SCSI Driver...
JF> Scanning Busses...
JF> ACSI... 01 02
JF> scanning done
JF> 00.01.0 Hard Disk FUJITSU M2682S-512 C D E F G H I
JF> 00.02.0 Hard Disk SyQuest SQ 555 J K L M
JF> SCSI driver not installed
JF> Installing ACSI-Buffer
JF> AUTO folder : C
JF> ACCs/DESKTOP.INF: C
JF>
JF> ----8<---

Ah yes! I recognise this. When it says "SCSI driver not installed" it is
reporting the situation when it started running. If you were to run CHHD
again (as happens on my m/c which uses MagiC which does a re-boot) it would
say "SCSI driver installed".

JF> Then there were 11 bombs across the "SCSI driver not installed"
JF> line.

:(ugh! NOT expected!

JF> Here's what the German installation docs say:
JF>
JF> ----8<---
JF>
JF> To install the CBHD harddisk [driver] you preferably should use SED
JF> if you have
JF> it. SED is the sector editor from the Scheibenkleister [book] which
JF> is freeware
JF> as source text.

I found SED v5.66 but was puzzled about how I was supposed to use it. I can
find nothing there which installs a driver. All I can think is that you are
supposed to use the sector editor to edit the boot block (which contains the
driver loader) to make it refer to CBHD.SYS rather than what was there before
(in your case, and mine, the boot block would have contained the string
"ICDBOOT.SYS").

JF> You may use CBHDCONF alternatively.
JF>
JF> First start a SCSI driver (CBHD.PRG or SCSIDRV.PRG).
JF>

JF> After that you can make a drive bootable with CBHDCONF
JF> ('Installieren' menu entry). Following this you have to copy CBHD to
JF> CBHD.SYS onto the corresponding
JF> partition.

This is where the trouble is, I think!

I don't know whether you have a streamer tape and have looked at GEMAR versions 3.0 and above. These use the CBHD driver and say that CBHD.PRG or SCSIDRV.PRG should be run first. If I do this GEMAR crashes!

Both CBHDCONF and GEMAR documentation seem to believe that running these PRGs will make the driver correctly available. I don't think this is true. The only way I have got CBHDCONF and GEMAR to work properly is to fiddle around to make sure that CBHD.SYS gets loaded at boot-time. Hence my long-winded method of getting the ICD driver-loader to load CBHS.SYS before running CBHDCONF/Install to get it to re-write the boot-sector to it's own specification.

Of course, you should only have to do this once!

JF> CBHD0 itself doesn't have any routines to use the interfaces of the
JF> Atari, it uses the routines of the SCSI driver instead. So CBHD0 can
JF> also be used on a Macintosh running MagiCMac.
JF>
JF> BTW: CBHD.PRG is also using the routines of the SCSI driver and
JF> doesn't use own routines if the buses are already served by another
JF> driver.
JF> ----8<---
JF>
JF> I think it's a bit confusing: if CBHD.PRG is the driver, what is the
JF> SCSI driver CBHD uses as mentioned in the documentation?

You are right! It IS a bit confusing. I have read this a few times and think that this is what it amounts to:

CBHD0 has NO hardware driving routines - it just hooks its software interface onto the driver already installed. (We knew this!)

If CBHD or SCSIDRV find h/w drivers installed they just hook the s/w interface into them. If there are NO h/w drivers installed (i.e if CBHD runs on a bare m/c) then CBHD and SCSIDRV install THEIR OWN h/w drivers.

If we assume there is a FAULT in the way that the s/w interface works with any installed ICD h/w driver this would explain why GEMAR and CBHDCONF fail if they are run with the s/w i/f installed by just running the .PRG versions in a running m/c.

Make sense??? If so Claus may have some work to do on the ICD driver/CBHD s/w i/f interaction. (Claus ?????)

JF> After unsucessfully trying to install CBHD on my harddisk, I re-
JF> installed ICDBOOT.SYS and prepared an autoboot floppy with CBHD.PRG
JF> in the auto folder and SCSI.RAM on A:\.

JF>
JF> I made a warm start pressing CTRL-Shift-Alt before the floppy drive
JF> was accessed --and it worked.
JF>
JF> But how do I get the stuff working on harddisk?

I think you are nearly there!!! I don't think that SCSI.RAM is necessary but once you have got CBHD running as the first (and only) driver you should run CBHDCONF/Install immediately when a new boot block which looks for CBHD.SYS will be written. Provided you have CBHD.SYS in the root directory of the partition you have selected as the boot partition everything should load up fine at the next boot. I suppose there are quite a few ways to make sure that CBHD is the first and only driver; my fiddling explored a few of these but yours is just as good.

I have just acquired CBHD v4.57. Not a lot of change but there is a primitive partitioner available in this. The part I REALLY want is the "Geratereihenfolge" which will enable us to tell CBHD which SCSI devices to scan - this will speed up booting.

While I have had quite a few bothers with CBHD/GEMAR/CBHDCONF I don't intend to denigrate it. It seems like a really fast driver and has behaved very well during the past 2 weeks when I have had it installed for normal use.

{Well done, Claus! Maybe there is a bit more work to be done on the docs. and the interaction with the ICD driver :) }

E> Anybody tramped this road before?

Funny you should mention this, Allan. It was also Hallvard (and now Jens,
too) who had problems with the CBHD driver.

I have cogitated over the evidence and done experiments of my own and reckon
that there are problems with the CBHD software interface running with ICDs
driver (6.5.1 in my case).

I know this doesn't seem to have much to do with newdesk size but it does
cause one to raise an eyebrow at the ICD s/w.

Hmmmm......

r> the internal drive in
r> about 99.9% of my tries won't find the protar and when it does, the
r> ATonce starat doesn't
r> find it as a boot drive.

Sounds like a termination or ID problem to me.

I'm not sure of the geometry of the bus in the Mega STe but I guess there is an internal adaptor from DMA to SCSI for the internal drive. This drive almost certainly has ID 0.

Your Protar makes another connection to the DMA and has its own (yet another) DMA-SCSI adapter.

The drives in these shoe-boxes are usually set to ID 0 at manufacture so, if you want to use them together you are going to need to change the ID to something unique.

I suppose there COULD be probs. running 2 adapters off the DMA. Not sure how you could fix this as the adapters will each have a hard wired DMA input which you can't adjust.

On a 1040, the only thing you should have to do in order to use both STraightFax and STalker together is to temporarily disable STalker before starting STraightFax. You can do this with the "Disable STalker" menu entry; you don't have to reboot or anything.

If you do not do this, then essentially STalker reads some of the data intended for STraightFax, thus confusing STFax immensely. I compare it to the old Three Stooges bit where they are all trying to squeeze through the door at the same time.

2790. News about WEBSPACE.

Newsgroup: comp.sys.atari.st
Date: 1996-11-15 00:00:00 UTC
From: Katherine L Ellis <kellis@primenet.com>
Message-ID: <Pine.BSI.3.95.961115111022.16483B-100000@usr10.primenet.com>
Source record: 133953

And yes, The story wasn't bogus at all.
There is such thing as WEBSPACE, The new HTML/WEB browser.
It was released as a demo on a french magazine. I have a copy here at
my webpage. I tried it. It is pretty interesting.
1) this demo is far from being usable. It allows you to view HTML off
line only.
2) True the speed seems to be very good not as much as 10 times faster
than CAB, like I heard before.
3) Besides, it doesn't support transparent gifs, as well as animated
so off course it speed up the process a little bit. But I am sure that
It will still be faster than CAB.
4) The graphical interface (french only on this pre-demo version) is
very good.
5) WEBSPACE requires more RAM than CAB to run.
6) The final version should be ready for the show in Paris. (7/8.dec
1996)
7) It will be released as a commercial program.
the price could (I say could) be around $60 US. And it would include
as well one nice book about HTML+ 1 month to Imagenet (internet
provider, only in france though)+ extras that I don't know yet.
8) WEBSPACE demo will be on CNAM in a few.

Well I think that's it.. I can't wait to see the final version..
Bye..

2793. need to convert IBM .pcx to Atari .pcx format

Newsgroup: comp.sys.atari.st
Date: 1996-11-15 00:00:00 UTC
From: fredu@enterprise.america.com
Message-ID: <56i9ne$mtl@enterprise.america.com>
Source record: 133956

I am looking for a way to convert an IBM image file in .pcx format to Atari .pcx format. The IBM tends to tag even a black and white image with color info, and the Atari apparently does not like that. I no longer have an Atari, but need the format of the image files for a similar application and the Atari .pcx files I have work fine.

I realize that I need an IBM program, but there must be some multi-platform users here who can help?

thanks

2794. Small Atari auction - one day left

Newsgroup: comp.sys.atari.st
Date: 1996-11-15 00:00:00 UTC
From: smedley@gte.net
Message-ID: <56ic9s$aup@news2.gte.net>
Source record: 133957
Cross-posted to: comp.sys.atari.st,rec.games.video.atari

```
**********
*** MAJOR UPDATE ***
**********

I added a section for buy-out bids. If the seperate bids for those
items is LOWER than the buy-out bid, then I sell them as a paclage.
But if the individual item bids are higher, then I sell off the
individual parts. Buy-out bids are listed at the end of this post.

Auction rules -

Bids will be accepted until Saturday, November 16th. At that point the
auction will go to a "going once, going twice" format, with updates
sent by e-mail to all participants. The auction will end NO LATER THAN
Thursday, November 21st (Turkey Day). If there are still competing
bids for an item when I check my e-mail that morning, the highest
bidder in my mail box gets it. Bid increments are a $1 minimum.

ALL PRICES ARE IN U.S. DOLLARS!!!

Shipping to be paid by buyer. All items shipped COD.
(I will pay COD charge, since I insist on shipping that way.)

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

Item #1 - Atari TT030 workstation

4 megs ST RAM
TOS 3.06 ROMs (USA)
720K floppy drive
120 meg hard drive
Long-range printer port modification
Revision H motherboard (will accept CaTTamaran 48Mhz upgrade)
Includes AtariWorks, Civilization, and a few misc. games

This system was formerly used to control an automatic embroidery
machine, which is why the transmission distance on the printer port
was boosted (sorry, but I don't know what the actual range is). The
floppy drive is actually a 1.44 meg mechanism, the system lacks the
Ajax driver chip required to do 1.44 meg read/write operations. (BTW -
Toad sells these chips for $40.) Keyboard & mouse included. Has been
packed away in my closet for some time, so clock battery is probably
dead.

Current bid: $245 by ghaddrel
```

CLARIFICATION - I cannot verify if the floppy is really a 1.44 meg mechanism. That is merely what I was told when I bought it. I do have a spare 1.44 meg floppy drive that I will include at no extra charge, just in case the drive turns out to be 720K after all.

-=-

Item #2 - AlberTT VME graphics card (x2)

1024x768 w/ 16 colors (compare to TT medium res of 640x480)
VGA output (48 Khz horizontal scan rate @ 1024x768)

This card requires a minimum of 4 megs ST RAM to operate. I have two of these, so the second highest bidder gets the other one. They should be compatible with just about any GEM program that recognizes the TT video modes. (I gotta admit, I have not tried them with anything - my monitor went on the fritz right after I got the cards so I haven't hooked them up. They do work, though - saw them tested before I paid for them.) I have no idea if it will work on a Mega STe.

Bid on card #1 - $50 by jonaeson
Bid on card #2 - $50 by jonaeson

(Yes, he wants both!)

-=-

Item #3 - Hand scanner w/ Touch Up software

400 dpi scan resolution
Cartridge port interface - no SCSI hardware required!
Includes Touch Up edting software

Everything works great in this package, and the scanning/editing software, Touch Up, is a fantastic package. Will work with any ST, STe, TT, or Falcon. In their most recent catalog (95-96) Toad sells a similair scanner for $109, plus another $39.95 for the software.

Current bid at $30 by dooley

-=-

Buy-out bids -

TT030 + one video card = $275 by smokin

>Bus compatible? Not pin compatible as well?
>Are these interrupts connected to pins or is it software controlled?

Pin compatible as well, you do have to supply the proper voltage to
one of the pin legs though.

The unimplemented integer interrupt handler is controlled by software
in our machines, a TSR in the auto folder. It has been compiled together
with the F-Line implementer into one patch now.

>You doesn't happen to know if it would be possible to put a 060 on the AB040
>without to many modifications?

I will know when we finally receive our AB040. David says he should
finally be able to ship next Monday. I suspect some problems though
with the OS. We use a modified / licenced version of TOS 3.06 on our
T60 and T40.

>Regarding price, the 060 is two times the price of a 040 if you buy it
>at Falcon Pro Center in sweden...
>
>//Magnus Kollberg

Yes, that is about right. The 68060 we sell for 800.00 Cdn., about
3700 SEK and the 040 sells for about 450.00 Cdn.

But, the 060 is easily 4x's as fast, so it offers better processing
value for the dollar (or Krona!)

All the best,
Chris @ Computer Direct

>
>//Magnus Kollberg

Other than the power requirement, the 040 and 060 are pin compatible.

This is the only mod required to switch between 040 and 060 on our
DirecT40 / T60's.

All the best,
Chris @ Computer Direct

>because the instructions are utterly incomprehensible.

You really must I'm afraid - none of the problems below can be
properly diagnosed until you have (and will probably then vanish). The
buggy rom serial routines will be corrupting data all over the place.

Place DRVIN.PRG before SCC.PRG. I don't have a Falcon myself so I
can't tell you if it will work without configuring. Post the questions
it asks here and someone will know the answers.

>However, that
>does apparently limit my speed. Now I have an entire series of other
>problems which seem daunting. (one fun one is that after installing
>the newest version, CAB tells me "read error on file /" no path, no
>filename, nothing! This is so frustrating!!!)

This is typically the result of miscommunications between cab and
cab.ovl. Cab.ovl communicates with stik and stuffs the files into
cab's cache. Cab then reads them. Usually, this crops up if cab loads
cab.ovl, which it does when it thinks stik is enabled, and it turns
out stik does not have a valid connection. Thus the problem could be
in cab, cab.ovl, stik, or not having hsmodem. Not much help!

>Here is the *host* of problems I am encountering:
>
>Following up my own message, I actually managed to get STiK to dial

>www131 archive. Anyway, I'm still having so many problems I can't even begin
>to troubleshoot it on my own.

1) I get no usable speeds above 19,200

hsmodem provides this. The max baud rate is 19200 as you know. The
faster rates are usually mapped onto unused lower ones. One section of
the hsmodem setup deals with this. Most people use the 3 slowest rates
but its up to you and partially explains the complexity of this
particular section. Note that I'm talking about the ST here - not
having a Falcon, means I could well be very wrong on this point.

>(the modem is a USR 33.6 which works find on my Mac).
>2) When I connect, it makes zero difference if I have the correct user
> name and password entered. I can enter complete garbage and it
> still thinks I am making a good connection. The script seems to be
> correct, it is the same one that works on my Newton (which also
> gave me fewer problems, believe it or not!).

Then it should not be giving you these problems. STiK will proceed
happily through a bad login btw but you will see if spend a lot of
time waiting for login prompts as a rule.

3) Nothing works, not CAB, not AntMail, not nuttin'.

It looks more and more like hsmodem.

>Let me add that I can set up PPP/SLIP accounts in my sleep on other
>platforms, I am not new to this, so I figure I must be overlooking
>something very simple that is specific to STiK. One thought that
>occurs to me is that STiK has no provision for entering the GATEWAY
>ADDRESS. I can enter the host name (tiac.net) and the DNS server,

NAMESERVER (the DNS) is the only address which needs to be in dotted
decimal.

>and of course my own IP number. I have arranged for the account to be a
>static SLIP account.

Then all you need do is set CLIENT_IP to your address. No need to
bother with the $GET_IP but you can (as I do), because it makes it a
little easier to see the login process has proceeded ok.

>I also run 5 PPP accounts for my employer through
>tiac with no difficulty. However, in all of these I can enter the
>Gateway Address. How can STiK possibly work at all without this
>setting???
>

>Any help would be useful.
>
>a) how do I get more than 19,200? I downloaded hsmodem, but the instructions
>are unusable. (running it seems to do nothing)
>

>
>c) Has anyone gotten Netcom and STiK to work together? how?
>
>d) Anyone got a handy login script for a decent nation-wide ISP you could
>post???

Look in the installer subdirectories for the generalised scripts. It's
pointless me posting mine because its for a subsequent beta and
radically changed.

>e) Why am I up so late?

dunno - I ask myself that self same question all too often! :-)

>Thanks in advance. Oh, I'm on a 14mb Falcon (clabs) with
>a 33.6 modem and all non-essential auto programs off (fspatch seems
>necessary, STiK also won't dial my modem without this installed).

Best troubleshooting advice really is to work from the bottom up. Do
the hsmodem thing then try the finger client - if that works then you
know stik is working and the nameserver setting is valid. Then start
on Cab.

>This is really bugging me, do you get that impression???

Never would have guessed! :-))

Plans are afoot to simply installation btw!

Yes, but it seems it only works on Falcon ?? Correct me if im wrong.
It disnt work on any of my machines. (ST, STM, STFM and STE)

>8) WEBSPACE demo will be on CNAM in a few.

It there, and its also on my BBS (WEBSPACE.TOS)

Junior Office is a FAX program for the ST that works well for me.
It is located at:

http://micros.hensa.ac.uk/micros/atari/tos/atari-tos.html

or

ftp.micros.hensa.ac.uk/micros/atari/tos
> 4. Host data mode

Buyer pays shipping. Thanks. /Danny/

2809. Slow and buggy STIK-Transmission

Newsgroup: comp.sys.atari.st
Date: 1996-11-16 00:00:00 UTC
From: gerdw@wa.caeci.ol.ni.schule.de
Message-ID: <GKQSBEURUP@wa.caeci.ol.ni.schule.de>
Source record: 133772

Hello!

I have a slow and buggy STIK-Transmission, if I use my provider
T-Online, Germany.

A friend of mine told me, that in the Default.CFG I can fill in the Line
"REPORT=1" to find out what's wrong.

I did it and Cab shows me at the bottom of the monitor the lines:

Dropped Packet! bad IP_Version 7
Dropped Packet! bad IP_Version 11
Dropped Packet! bad IP_Version 7
Dropped Packet! bad IP_Version 10
Dropped Packet! bad IP_Version 14
Dropped Packet! bad IP_Version 7
Dropped Packet! bad IP_Version 7

and so on.

The pages were transmitted, but very slowly,
and often the RD and TD lamps of my Modem were blinking, but nothing
happens "Receive bytes 0".

Only the list of bugs" Dropped Packet! bad IP_Version 7" is growing.

Can someone tell me, what I can change, that this problem doesn't
happen any more?

Greetings to all

Gerd

>Hey, congrats., Daron!!! But it's not Xmas yet!!!!

Yep I know, just hel to get it all working!

>This graunching cartridge ... it's not write protected, is it?

Nope, just verified as screwed on both my and other ZIPS.

>It'll gobble up some of your RAM and, in exchange, give you more
>partition identifiers to use if you run out on normal DOS.

Ah right, not much use to me then at the moment, still enjoying the
use of Kobold in backing up in ten minutes!

The only worry about the ZIP is that when formatting I always get bad
clusters (from 2 to 16) on each disk when formatting which others do
not seem to get, but the data seems secure enough (this is using HDX
5.04).

The only panic was with the termination, I had set it to on on the ZIP
which everyone recommended, and then the decent into hell
commenced....

The MiniS was knocked off the desk which resulted what I thought was a
completely corrupted drive, and I copied all the data I could onto
ZIP, reformatted the drive and copied back the data, no difference,
applications bombing out all over the palce, WWW pages screwed, NeST
main progs knackered, et al.

After panicing left right and centre I remembered having similar
problems with the CD-300 when I first installed it (set to terminated)
so turned the termination off on the ZIP, and now all appears to be
back to normal!

A scrary 24 hours though!

Not as fast as the PPC 603e processors. Spending that kind of money on a
processor line that is not going to be continued is ludicrous. Need to goto
PPC for power/performance and more bang for the buck..

If you run STik I suppose not, but you can't be 100 percent sure until
you've checked the source code :-)

With Oasis 1.35 and NOS.TTP it's another story. NOS can act as a ftp
server making both download and upload from a remote site possible. I
have actually seen examples of STARTUP.NOS on the net where the ftp
server is started. I have never tested if it really works though.

If you have a dynamic ip address it's of course much more difficult to
find your correct address.

hmmm It sounds like your TCP/IP parameters are to high, and thus
fragment to much your data.
In this case you should lower them down to MTU= 576 MSS=536 and
W.RCV=4*MSS (I don't have a calculator).
TRy that first.. Bye.

2819. STiK sending CR after connect - how?

Newsgroup: comp.sys.atari.st
Date: 1996-11-16 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GKQLBDUQUp@tos.ak.planet.gen.nz>
Source record: 133782

I am trying to set up STiK for a club member so that he can access the internet via SLIP. As I use MiNTNet myself, I am not very familiar with STiK.

The ISP I am with requires that a carriage return (CR) character be sent as soon as the modems have connected before the ISP sends a "login" prompt.

Here is the STiK dial.scr I am using:

```
--- SNIP ---
BAUD_RATE = 19200
HANGUP = ATH
PREFIX = ATDT
PHONE_NUMBER = 3032900
INIT = ATZ
CONNECT_WAIT = 35
REDIAL_DELAY = 20
SUCCESS = CDWAIT
FAILURE = BUSY
FAILURE = NO CARRIER
FAILURE = NO DIALTONE
WAIT 1
RESP = /
FIND = ogin:
RESP = sbreid
FIND = word:
RESP = your_password
FIND = ogout
RESP = 3
--- SNIP ---
```

Well, what happens is that it connects, and just sits forever waiting for the "login" prompt.

I was told that the

```
WAIT 1
RESP = /
```

portion would send the CR after the connection was made. Is this correct?

It appears that the CR may not be being sent.

Any help in getting this to work would be appreciated.

Hi all..!

I'm in desperate need of someone to help me with a little problem that
i'm having..

I just recently started useing CoMa 3.50 as it is compatible with my new
modem (Sportster VI (Voice/Fax) And I used to use STraight Fax 2.5 until
I relized that it would not work properly with my new modem! And I used
to have no problem useing Calamus to print to a STFax file (.J0?)

Now I would like to do the same with CoMa 3.50!!
I there a driver that will let me print a Calamus file (.cdk) to use within
CoMa?

Any suggestions would be Very Helpful..!!
Any drivers forwarded to my mailbox would even be more helpful.! ;-)

Thanks
John Dooley

YES! This seems to be exactly it. This is exactly what happens to me.
A reboot seems to clear it all (happened just now).

It definately seems to be a problem with Magic and the DSP. I only use jpegd
for DSP stuff and there's definately a clash there between Magic5 ad it.

Any comments Andreas?

Ron,

Stalker cannot operate with a SLIP or PPP connection, but you can do all those things using a normal dial-up connection. If the Victoria freenet is like the TFN you should be able to browse the web with Lynx, a text-only browser and even download .html documents and images to view seperately.

Freenets don't usually offer SLIP/PPP connections anyway, does VicFN?!

I'd like to see the answer to this also as our local provider requires a
CR before any transmission begins.

Dan

```
Hi! I am looking for an Atari mouse for my STe, the one I had accidently
got crushed by a box while I was reorganizing my room. It must be in
working order and it doesn't have to be the Atari mouse but I won't
complain if it is. Thanks...

You might want to check if the modem on the other end is a US Robotics.
They have a known problem with "pausing".

It's a weak VT 52. I WAS working on a VT 100 version, but the
compiler is giving me problems. Maybe one of these days.

>Guess the question is...
>Does this overlay use the DSP to load the images for CAB?
>Or...Is it only good with the ACC viewer that comes in the archive?

All you need is the JPEGD program in your AUTO folder - this is the gubbins
of the DSP decoder. The ACC that comes with JPEGD was just a test program
to show that it worked, so you don't really need that bit.

IIRC the JPEGD program was supplied with ImageCopy too, though there does
seem to be a buch of different versions floating about - all with the same
version number apparently!

I'm still using the JPEGD I've had in my AUTO folder for ages, and I too
can notice the difference in the time it takes CAB to display a JPEG. If
anybody wants to know, the JPEGD I'm using is 10640 bytes long.

>I'm sure we are found more as 10 people in few minutes that need a manual
>with MORE spez.informations about magic5.0x
>magic5 have ONE smal manual for magic5, magicMac and magicPC..

Exactly... I was trying to install an app a few days after buying MagiC which said it had to be places in MagiC's APPS folder. Nowhere in the manual does it mention what the APPS folder is or where it is located...

On another point - today I was trying to free memory for a fairly memory-hungry application. I tried downing the resolution, but I noticed every time I changed res, I was losing more and more memory... By the time I'd changed res 3 or 4 times I was down to around 300K. This is on a 4Mb machine (well okay, with my usual installation I'm at 1.2Mb after booting). Is this a bug?

Neil.

Hi! I'm a french ATARI user.

Did you know PHENIX 040/060 ???
This will be a new ATARI clone, by Centek, in France.

First caracteristics:

- MOTOROLA MC68040 66 Mhz --or-- MC68060 120 MHz
- 32-bit Data and Address BUS 33 MHz
- 64-bit interlaced RAM ext. to 120 Mb with SIMMs 32-bits (4 slots)
- FLASH EPROM 64Kb for the DOLMEN system's kernel, which allows updates facilities.
- DSP 56302 (Falcon compatible) 66 MHz (66Mips), 6 DMA channels (32-bit)
- 26 pins DPS port for Audio Digital Interfaces (Falcon compatible)
- Second slot for DSP 56302 linked to the first DSP
- IOP 683xx - 4 serial ports - 1 parallel port with 2 independant DMA channels (32-bit) - Max 44 Mb/s
- FAST SCSI-2 WIDE controler (16-bit) - DMA 32-bit - 20 Mb/s
- High quality Vocal Synthesis Processor on mother board.
- 3 PCI slots (32-bit)
- PCI Video cart. with 2Mb Video RAM:
* Matrox 'Mystique' (1280x1024 16M colors)
* Matrow 'Millenium' (1600x1200 16M colors) (PRO)
- 2 slots for Audio/Midi carts:
* 16-bit, 2 in/4 out, with CODEC SURROUND (Falcon compatible)
* 24-bit, 8 in/8 out + S/PDIF interface (PRO)
- 2 slots: DIRECT PROCESSOR 040/060 for any extension carts (PC emulation, RAM...)
- Standard PC keyboard - 105 keys and standard 3 buttons mouse (9600bps)
- Standard PC tower or desktop, grey or black.

DOLMEN is a new operating system, which is TOS compatible.
The CENTurbo II has a slot for a 64 Kb FLASH EPROM which will contain the kernel of DOLMEN. All this will be connectable to the Falcon.

Phenix 040: 'Mystique' graphic cart, HD SCSI-2 1Gb, 1 CDROM SCSI-2 4x and 8 Mb RAM.... Price? less than $2000!

What are you thinking about it?

I've found that SpeedoGdos 4 works best with Atari Works, NVDI and
SpeedoGdos 5 both leave spurious lines on the screen, forcing
screenrefreshes, also, SGdos 5 doesn't seem to display bold characters
properly with AW., I therfore have all three now set up under stoop,
and use SG 4 for use with AW only, I loose the other font families,
but so what. I agree, AW is great for quick general purpose use, just
as long as you remeber to save before using the thesaraus or spell
checker!

Okay, it -sounds- good...but what about the rumors going around that
you would use STik to dialup your server? I mean, if thats true, then
that would mean no PPP, just SLIP (still!) and it wouldn't help Atari
users like me at all... :(

Sincerely hope that it dials itself, and supports PPP!!! :)

2842. STARTRACK-HDR-Sampler for Atari (VME-Bus)

Newsgroup: comp.sys.atari.st
Date: 1996-11-16 00:00:00 UTC
From: stepwil@aol.com
Message-ID: <19961116013000.UAA03998@ladder01.news.aol.com>
Source record: 133892

Hello !

I should like to announce herewith, that STARTRACK, the
Harddisk-Recording-Card
for all Atari and compatible systems (TT,Eagle,Medusa and Hades) with
VME-Bus
is now released !
You can see and test it on the Atari-Fair in Neuss (near
Dusseldorf/Germany)
from 30.11. to 1.12.96 at the stand from MW-electronic.

Thereby you can also see the working prototypes from the DSP-extension
(with
Motorolaxs DSP 56001-33 and another extension with DSP 56002-40) and the
XLR-extension (on a professional mixer-equipment) for the sampler in
action.

Ixll be there, and proudly to answer your questions referring to the
HDR-soundcard.

All musicians, music-publishers and interested people are welcome of this
Atari-fear
in Germany !

I have make yesterday an exact soundcheck with this Soundcard, and the
result is,
that the sound of my DAT-recorder (Onkyo DAT-901) is not better as the
soundcard.
On the contrary - partly noise the soundcard less as the DAT-recorder !

I have until now the soundcard successful tested on the following systems:
TT, Medusa T40, Hades 060.
(For all people which it not to know: the Hades is a Atari-compatible
construction
from Switzerland (Medusa Computer Systems) with 4 PCI, 2 ISA-Bus and
1 VME-Bus-connectors, 8 sockets for PS/2-RAM and as processor an MC68040
with 64 MHz or an MC68060 with 60 MHz in a Mini-Tower).

I have make a few tests with the Hades 060 and my Sample-Editor for
Startrack, that me really have knocked-out:

10 tracks mixing and level-adjustment for each Stereotrack at 48 kHz
samplerate
12 tracks mixing and level-adjustment for each Stereotrack at 44.1 kHz
samplerate
16 tracks mixing and level-adjustment for each Stereotrack at 32 kHz
samplerate

Thereby is it important to know, that the mainprogram is written in
GFA-Basic
and the sample load-routines also execute in GFA-Basic.
Only the mixing from the tracks is execute in Assembler.
By an optimizing from the load-routines in Assembler is it most likely,
that you can more
tracks mixing.
The complete calculating is making by the host-mainprocessor (68060) from
the
Hades and not from the DSP.
The DSP can parallel to the hostprocessor calculate DSP-Effects

Altogether (in my opinion) is the Hades ideal for Harddisk-recording.
It have a great System-Performance (more then PCs and Apples ?).

For musicians really interesting and important: The VME-card can you plug
in a
special 5 1/4 inch slot in your PC-case. All connectors from the Soundcard
are now on
the front from the PC-case. That is very practical and useful, when you
often
connect and disconnect the Connectors (Cinch and TOSLINK-Opto).

The Soundcard have following Connectors:
digital Input and Output (optical TOSLINK and Cinch, switchable)
Stereo-Analog-Input (2 Cinch) with 16Bit sigma-delta linear A/D, 64 x
oversampled
Stereo-Analog-Output (2 Cinch) with 18Bit sigma-delta linear D/A, 64 x
oversampled
Thereby are the Input and Output exactly one after another trimmed i.e. at
0dB-Output-Level
have the Output the same level as the Input. The Output have
CD-Player-level.
You have also a SCMS-Decoder for free-copy from the digital-Input and
Highend Stereo-Volume-Controllers (in hardware) for the Input and optional
for the Output.

The XLR-extension is in a double 5 1/4 Inch-Slot for a PC-Case. The
XLR-Connectors
are now on the front from the PC-case. Optional can you have this
extension as a
VME-Slotcard.
You have digital AES/EBU Input and Output in XLR-norm and Analog-Input and
Output
in XLR with Studiolevel.

The Romport-Card for the Hades is now released.
This card have 3 Atari-ST-comatible, switchable Romports, 2 internal and 1
external for
Romport-Dongles.
This is importand for Cubase Audio, Emagic Notator Audio and other
dongle-protected softwares.
I hope, that this Programs work in the future with the STARTRACK-Sampler.

That all can you see it on the Atari-Fair on a Hades 060 !

My STARTRACK-Homepage: http://members.aol.com/stepwil/index.html
On the Homepage you can download a free Demoversion from the actual Startrack-Editor and
you can read details from the Startrack Hardware and Software.
A picture say more as thousand words: Pictures from the STARTRACK-Hardware and
Software can you see it on the Homepage. The Homepage is written in german, in one
week also in english.

email me: "stepwil@aol.com"

Greeting from Germany, Stephan

I have read about someone in Europe coming out with a D2D device for non-Falcon TOS computers in ST Format, would this be it?

One note, since this is VME-bus it means that it won't work on the ST's. But there's a program called Sam-2-Disk that uses a sampler like Stereo Master to record and playback samples on hard drives. It was on a coverdisk of ST Format and goes up to 20Hz, so it's good for fooling around at home.

Now D2D is on ALL Atari's! :)

That's cool, so I wonder what types of games could be played on it? :)

As for the infrared port, I read that it wouldn't work on a ST computer
because the serial port is not like the PC's. But the direct connection
can be used only it's the same as a null modem, one file sat a time. But
using Ghostlink can make it easy. :)

Hay Fred, If it's an IBM disk formatted double side double density you
shouldn't have a problem. If it's high density... all you have to do is
get it on a dsdd disk and your atari will be able to find the file.

Now... going frrom Atari to PC... you'll need a program to make the disk
readable. I found a couple on the UMich web site. I think it's called
Convert or PC-ST. I hope this helps you.

>I dunno. I'm using NVDI 3 and Atari Works 1.2 on my MegaSTe and haven't
>encountered any such difficulties.

I'm using NVDI v3.02 with AtWorks v1.2 on a Falcon and have not had any
problems with fixed characters at the top of the page. (You might check
to see if there's something hidden in your header/footer controls?)

I use these with an Epson Stylus Color printer, and the only odd thing I've
noticed is that on occasion, when attempting to print a single page, the
page prints fine and then the system form feeds 2-3 blanks pages and then
the printer says it's out of paper (even when it isn't.)

If you've been working with Ataris for as long as Dan and I have, then you've
learned to live with its quirks!

To my knowledge, there is no such thing a "Atari .pcx format" graphics.
PCX files are from the IBM platform, and the only relationship they
share with Atari is that there are Atari programs that can view them.

Like I said WEBSPACE IS THE NEW HTML/WEB BROWSER. I think most of the
people know what a browser is. :)
It would replace CAB.
However, if OXO have a plan to program a dialer then PPP connection
would be possible without Mint+mintnet. But as far as I know, no
dialer.
SO you still have to mess around with STIk or Mintnet.. hehehe
WHo knows what will the complete package be.. It might (MIGHT, pure
personal supposition) include a PPP dialer...
Bye..

Message-ID: <E0xw4C.54t@iglou.com>
Source record: 133901

I have two monitors, one color and one mono. I'd like to sell them. I have no idea of what they are going for, but make me an offer.

The color monitor is the older one (not the one made by Goldstar). I think it was made by JVC.

Send me e-mail....

So it really does exist after all :)

>1) this demo is far from being usable. It allows you to view HTML off
>line only.
>2) True the speed seems to be very good not as much as 10 times faster
>than CAB, like I heard before.
>3) Besides, it doesn't support transparent gifs, as well as animated
>so off course it speed up the process a little bit. But I am sure that
>It will still be faster than CAB.
>4) The graphical interface (french only on this pre-demo version) is
>very good.

I've just downloaded it from your page and given it a try!

My impressions are (on the downside):
2. The demo is rather poor but then it's only a demo.
3. Nearly all GIFs displayed are totally corrupt.
4. It hangs on all jpegs that I've tried it with (needing a reboot).
5. It doesn't use NVDI fonts. Pages are displayed with the standard atari
font and look awful!

On the plus side:
1. It looks like it could be excellent but needs a LOT of work first.
2. It's very fast!!! Which could be the biggest advantage over CAB (after all
speed is everything when online).
3. It looks like it'll support STiK andMiNTnet directly. No need for
gluestik etc.
4. It looks like it's going to support email and news directly.

I would want to see a MUCH improved demo before forking out $60 for it
though. As it stands ATM, I wouldn't pay $6 :(Maybe a demo that supports
everything the commercial one does but offline?

>6) The final version should be ready for the show in Paris. (7/8.dec
>1996)

Not long now then!

Gary.

2853. Re: need to convert IBM .pcx to Atari .pcx format

Newsgroup: comp.sys.atari.st
Date: 1996-11-16 00:00:00 UTC
From: fredu@enterprise.america.com
Message-ID: <56k4vk$o5n@enterprise.america.com>
Source record: 133903

I appreciate the responses to my post and I apparently was not all that clear. I need to create a one-bit image in .pcx format. I was able to use some old .pcx files I had left over from my Atari days with no problem. At that time I also attempted to read some IBM created .pcx files into Touch-up and got the message that color was not supported.

Even though the images were black and white, they were 8-bit image files and were interpreted by the Atari as color, understandably so.

Now I need the reverse, and the same problem arises. I need to create a one bit image file in .pcx format and all the miserable IBM programs I have make the file 8 bit color, even though the image is only black and white.

I was hopeful that someone on the net used an IBM class program to manipulate images and then perhaps incorporated them into their Atari, validating my search.

I do not have any file transfer problems as noted in an earlier message. I no longer have an Atari computer to make the conversions, but I do need that format of image.

thanks
fred

2857. Stacey Selling as Parts!

Newsgroup: comp.sys.atari.st
Date: 1996-11-16 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <56k85u$jva@nadine.teleport.com>
Source record: 133907
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

I have an Atari Stacey I'm selling for Parts, to be sold for parts. Not to be repaired. If you wan't to try to buy it to try to repair it? I'd advise against it. It is one of the first ones off the Assembly Line, without batteries. It's Switching Power Supply has been tested & works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold. Unless, of course, It's sold with the Stacey. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

Hi Ron,
Let's see. The sequest 135 removable seems the way to go for you.
They are faster than the Zip, hold a bit more megs and are SCSI so
they will be compatable with any future computer you care to buy.
The future of Atari isn't as bleak as you suggest. Magic is available
for Mac and PC's now and don't forget we can still easily exchange
files (text, graphics etc) easily with other platforms. We can still
do virtually everything a PC or Mac can do (though I do wish we had
a decent player for AVI animations!)
Cheers
Dave Beards

You probably need to add an SMTPSERVER address. This contains the
address of your provider's SMTP Gateway machine. The following lines
are from my config file.

EMAIL = ccook@icis.on.ca
SMTP_HOST = mailhost.icis.on.ca
SMTPSERVER = 205.233.131.2

Now if I could just get e-mail support in the mint overlay!

Hi all..!

I'm looking for a GreyScale HandScannr for the Atari ST/e line of computers.
I will also need the Cartridge port connector to plug the scanner into to
use it! :)

If you have on for sale please e-mail me at: dooley@infomatch.com

Hi all..!

I'm looking for a SCSI Host Adaptor..!
I'd prefer it without the drive but if it's a good deal... hell I'll buy
the drive too..! :)

Would prefer a Link96 but any SCSI host will do..

So if ya got one.. E-mail me at: dooley@infomatch.com

SeeYa

I dunno but it seems to need LOADS of ram.. I booted with my normal
setup loaded it and had about 9 megs of ram free.. thats without any
pages loaded into it.. I probably use just less than a meg at bootup
so thats 4megs just for webspace to load?

Nick.

Don't worry. I changed to an older version of CAB.OVL and it works fine...

Thanks anyway.

Okay, as it stands, I translated the resource files for WebSpace and sent them to OXO. In other words, there is now an english resource. However, to prevent any problems (e.g. like we had with Thing - no fights! Just an example) I sent it to OXO and they will do with it what they will. Do not ask me to send it to you here in this newsgroup. I will make decisions about if I can give it to anyone if I am sent email back from OXO, and if email is sent to me by people. Oh, and to the best of my knowledge, WebSpace is going to be a complete system, including its dialer, etc. It to be commercial from *RUMOPURS* (Rotten vi) (Rumours) I have heard from well placed people. Also, the fonts do work. It's just that the demo does not save the font, so you have to select it everytime you use it. the only thing I haven't tried is being on-line with it, and though I believe you all I want to make sure for myself. So far, everything I tried worked to a lesser or greater degree. Yes, I'm using a Falcon, but I also tried it with my STe, which also worked. The demo's home page function didn't work properly, so I had to load it by hand. CAB's HTML files work as well.

Yes, that is allowable, at least with MagiC 4 (I can't imagine MagiC5 not doing likewise). However, it is necessary to turn pre-emptive m-tasking off, so you have to wait til the system lets you switch tasks.

The 060 is *very* fast, if you want price/performance, get a StrongARM chip
- 233MHz for 50 dollars!! And a very nice chip it is too.

As is usual, Peter is wrong. The 68060 runs 68k code much faster than
a PPC does. A PPC to be truly efficient needs software written in
native PPC code.

All the best,
Chris @ Computer Direct

Sure you have the access to the new HSMODEM speeds (like selecting 38400 baud),
but that wasn't what I meant. I meant that you won't get HSMODEM's
faster serial routines. Without these faster serial routines, I can't
get 3200 cps rates on a Falcon with MultiTOS or similar system.
But surely this isn't a problem with faster machine like TT.

The program is called 'ST2DOS' and it runs on the DOS machine. It rewrites
the offending areas of the ST-formatted disk and thereby makes the disk
readable and writeable on both machines.

I'll second that:). My Quadra 040/50mhz will run 68XXX code just as fast
as any PPC. The 060 will again run four times faster. So why pay for a
new
PPC that will be four times slower than the newly available 060 TOS
machines?
So you can go out and spend another 5 to 6 grand (bucks, dollars,
whatever)
in Mac software?

Thank's for selling the best,

Mike

If I remember correctly RESP = lines need a proceding FIND = line
before it thus try

WAIT 1
FIND =
RESP = /

and see if that helps.

Nick.

Got just what ya need here. I have a 525 meg Fujitsu drive in a Toadstor
case with ICD Link 1 in excellent condition and still under warranty for
sale. Paid $749 for it 2 years ago and its been idle for over 6 months
now since I took down my BBS. Make a reasonable offer and maybe we can
cut a deal, I'm flexible on the price and its a great drive setup. There
is about 3 years left on the warranty. I gotta sell it as a package
though. If I ever decided to put the BBS back up and had only 1
component, I would be stressed out, but if both are gone I would forget
it and the expense that comes with running a board again. Let me know.

2895. Attn: TT owners with 4mb TT ram

Newsgroup: comp.sys.atari.st
Date: 1996-11-17 00:00:00 UTC
From: orb@u.washington.edu
Message-ID: <56o371$1g9@nntp1.u.washington.edu>
Source record: 133833

Hi-
I currently have a CA400312 4Mb TT RAM daughterboard in my TT030. The CA400312 cannot be upgraded past 4 Mb (AFAIK). I'd *really* like to upgrade to 16 Mb TT ram since i'm running NetBSD on my machine and it's kinda tight with X11.

Thus i'm looking to trade my CA400312 with someone who owns a CA401058 daughterboard that can be upgraded to 16 Mb. If you only have 4 Mb TT ram and have no intention of upgrading to 16 Mb, the swap would be completely transparent & you shouldn't notice any difference.

I can offer $25 + shipping for the trade. Please reply to orb@ee.washington.edu if interested.

thank you
-kyle

2896. New Jaguar Games (Was Re: Keep the Atari Spirit alive!)

This is a beginning of a new thread I hope, but it has much to keeping the Atari spirit alive...though it has nothing to do with portible computers or any rantings from the Sinclap a.k.a The MacNerd (I hope)

On Sat, 16 Nov 1996, Steve wrote:

> Thank God we will no longer need to deal with the absolute
> stupidity of the Tramiels. Another example of lunacy by the T bro's.

Can you believe people out there are still playing 2600 games? So I don't see anyone dumping Atari machines in a pit somewhere. And that doesn't even include EMULATION of Atari systems either. :)

> Join the Telegames list. As a result of the list, 4 new games will
> be released for the JAguar. Show your support!!!! Contact Telegames at

Hopefully, it will survive as a cult system much like the Vectrex. Too bad it lost a lot of creditiblity because of Atari and lazy programmers. :(

> How would you feel about Jaguar shareware and would you be willing to
> pay money for a hardware add on that allowed it? Developers Welcome.
> Vote for the games you want to see @ Kitten Litter
> http://www.dfw.net/~kitten/

First, make a Jaguar console that allows shareware games to be downloaded into it. Sony is coming out with a PlayStation that will do the same thing. Then also offer ST's as a means of a cheap development computer to code custom games. Maybe someone might be clever enough to make STOS

extensions for Jag games, so game making can be *that* easy! :)

Hi,

I have an Atari SLM804 laser printer for sale.

300x300 DPI / 8 Pages per Minute
Plugs into DMA port of the ST or TT030
Drum installed is in fair condition
Extras included with printer are a drum (not great),a new sealed toner,
and SLMC804 ASCI controller.
Comes with manual and I can supply a disk of SLM utilities

Asking $125

2898. Cubase v2.0 for Atari

Newsgroup: comp.sys.atari.st
Date: 1996-11-17 00:00:00 UTC
From: Ned Kelly <ned@glenrowan.com>
Message-ID: <01bbd4d0$aa6ee120$LocalHost@mail.aapi.co.uk.aapi.co.uk>
Source record: 133836
Cross-posted to: alt.steinberg.cubase,comp.sys.atari.st,comp.sys.atari.st.tech,maus.sys.atari.software,tp.pd-soft.atari,uw.sys.atari

I have recently bought an Atari ST with Cubase v2.0, but unfortunately, no manual! I would like to get hold of the manual, or at least a copy, and am happy to pay reasonable costs involved.

Please mail me on "mwainwright@aapi.co.uk" if you can help.

(NB As I am in the UK and my Atari is in Australia, replies from either country, or nearby, are probably the most practical, but don't let my/your location get in the way!)

2899. Looking for Volume 3D program.

Newsgroup: comp.sys.atari.st
Date: 1996-11-17 00:00:00 UTC
From: "Mr. Maddog" <mrmaddog@ptdprolog.net>
Message-ID: <Pine.GSO.3.95.961117173148.23771C-100000@ns1.ptd.net>
Source record: 133837

Does anyone know where I can find a copy of Volume which creates 3D objects and renders them? I tried looking on most Atari FTP sites and even used Archie, but it's not on the Net anywhere!

It was on a coverdisk of ST Format Issue 34 (May 1992). If someone has a copy or know where to get one, please be kind to let me know. I'm trying to make sprites for a game I'm making, so if not this then I'll have to try to download Cyber.zip from Umich.

2900. Linux/m68k v2.0.25 is out

Newsgroup: comp.sys.atari.st
Date: 1996-11-17 00:00:00 UTC
From: Jes Degn Soerensen <jds@kom.auc.dk>
Message-ID: <52vzq0gmvws.fsf@dacia.kom.auc.dk>
Source record: 133838
Cross-posted to: comp.os.linux.m68k,comp.unix.amiga,comp.sys.m68k,comp.arch.bus.vmebus,comp.sys.atari.st

The Linux/m68k development community is pleased to announce the first "stable" release of Linux 2.0 for Motorola 680x0-based systems. The basic kernel sources include support for Atari TT and Falcon series and Amiga computers. There is also a port to the Motorola VME 162, 166 and 167 boards available (see below for contact information).

Linux is an implementation of the Unix operating system that has been made freely available under the GNU Public License. It was originally written for Intel 80386 processors by Linus Torvalds, and has been subsequently ported to run on Motorola 680x0 series, SPARC, MIPS, PowerPC and Alpha processors. Work is in progress on ports to the Acorn ARM and Intel 8086 processors. For more details on Linux in general, we refer you to the Linux Documentation Project (see below for addresses).

Linux/m68k runs on the following CPUs: 68020 with 68851 MMU, 68030 (not 68EC30), 68040 (not 68EC040 -- see below for 68LC040), and 68060. It does not run on the 68000 and 68010, because those systems have no Motorola-supported MMUs.

For 68020, 68030, and 68LC040 users: The main distribution of the kernel only works on systems with FPUs. There are kernels available with FPU emulation, however.

What's New in 2.0

The major changes since the last stable Linux/m68k release, version 1.2.13pl10, include the following:

* System response time is somewhat faster. The kernel can now be compiled for a specific CPU, saving some runtime checks that cause performance losses (particularly in the memory management code). Specific 68040 and 68060 optimizations are optional.

* Harmonization with the main Linux source tree. This allows future releases of Linux/m68k to be made nearly in sync with Linux/i386 releases (within a few days in most cases).

* Support for more filesystem types. Amiga filesystem support now includes both reading and writing to all types except AmigaOS 3.x Directory Cache filesystems (these are read-only), and is substantially faster. The driver also supports read/write access to Amiga MultiUserFileSystem (muFS) volumes.

* The ext2fs (Linux's native filesystem) has been changed so that all
CPUs use a common byte-order. Backwards compatibility is retained
with the Linux/m68k 1.2.13pl4 filesystem format; the new ext2fs
utilities (versions 1.05 and later) allow older filesystems to be
converted to the common format. Upgraders should use the new ELF
ramdisk for installation. The previous ext2fs format will be phased
out gradually.

* Many more kernel components can be built as modules. For example,
if you have a mostly ELF-based system, you can remove the a.out
support from the kernel proper into a module. The a.out module can
be demand-loaded by the kerneld daemon as needed. [You must include
support in the kernel for whatever format your init program is in.]

* The Point to Point protocol has been improved. A new release of the
pppd program is required for it to work (see below).

* Networking has changed significantly. You will need to update your
basic networking utilities (ping, traceroute, etc.) when you start
using 2.0.

* Many other goodies have been added that may only be of interest to a
few people. Filesystem quotas are now supported, as are IP
firewalling and masquerading, disk striping (RAID0), RARP, and
process accounting. NFS support has improved to the point where it
is possible to boot from NFS volumes. See the Documentation
directory of the kernel source for details.

* New hardware support for Linux/m68k since 1.2.13pl10 includes:
- 68060 processor support
- Cyberstorm and Cyberstorm II SCSI modules [Amiga]
- Blizzard 1230IV and 1260 SCSI modules [Amiga]
- Blizzard 2060 on-board SCSI [Amiga]
- All GVP SCSI adapters, except T-Rex cards and pre-Series II [Amiga]
- Color on OCS and ECS displays [Amiga]
- Hard drives (and other rigid disks) partitioned under MS-DOS
- Parallel port on the Multiface III card [Amiga - serial was
supported in 1.2.13pl10]
- ATAPI IDE CD-ROM support

* Hardware support not included in this release but available elsewhere:
- Floating Point emulation [copyright issues prevent its inclusion
in the distributed kernel tree]

* In the works:
- Apollo Domain workstation support
- Apple Macintosh support
- Sun 3 support
- MVME 147 support
- Debian/m68k (the first real "distribution" for Linux/m68k)
- Red Hat/m68k (another distribution)
- Cirrus Logic-based graphics cards for the Amiga [Picasso, Piccolo, SD64]
- Atari TOS and AmigaOS emulators

* Work is currently underway on Linux 2.1; Linux/m68k development is in sync
with the general kernel tree.

Command line changes

The kernel command line has changed somewhat:

* Atari users: the 'atavideo' parameter is now simply 'video', like on the
Amiga. See 'Documentation/m68k/kernel-options.txt' for some new parameters
that are supported.

* If you are booting from a ramdisk, you must now specify the root device
or else the kernel will not boot.

For example, instead of:
amiboot -r ramdisk-name video=vga70
Use:
amiboot -r ramdisk-name video=vga70 root=/dev/ram

* GVP SCSI users DO NOT need the gvp11 parameter any more; the driver now
auto detects the DMA range that each SCSI controller is capable of using.
If you are currently using the gvp11 parameter, remove it.

For example, instead of:
amiboot root=/dev/sda1 video=vga gvp11=0xfffffffe
Use:
amiboot root=/dev/sda1 video=vga

How to get upgraded software

If you haven't already upgraded to ELF, the best way is to back up
your user directories, repartition (if you like) and get the
Watchtower-2 filesystems. These include all the software you need to
upgrade to 2.0.

If you already are running an ELF system, you'll need the following packages:

pppd version 2.2.0f or later
sysvinit version 2.60 or later
procps 1.01 or later
modules 2.0.0 or later (only if you are using modules)
NetTools 1.32alpha or later
e2fsprogs 1.06 or later

To compile a kernel, you will need at GCC version 2.7.2 or later and
binutils (ld, as, etc.) version 2.7 or later.

In addition, users should upgrade to the latest version of their
bootstrap (ataboot 1.8 or amiboot 4.0) or Amiga LILO (1.02).

You may need other packages as well depending on your configuration.
Please read 'Documentation/Changes' in the kernel source tree for
details.

Where to learn more about Linux
---

* The Linux Documentation Project home page is a good place to start
learning about Linux in general. Point your World Wide Web browser
(for Linux/m68k, probably Arena or Lynx) at:
http://sunsite.unc.edu/mdw/index.html [USA]

* For Linux/m68k information, see:
http://www.rose-hulman.edu/~lawrenc/linux/index.html [USA]
or
http://bunsen.pci.uni-hannover.de/linux68k.html [Germany]

* Don't forget to register yourself as a Linux/m68k user at:
http://www.cs.kuleuven.ac.be/~geert/Linux/m68k/ [Belgium]

It's not required, but it does help us get a "feel" for how popular
Linux/m68k is.

* The Linux/m68k FAQ is available at:
http://www-agrw.informatik.uni-kl.de/~jmayer/linux68k/linux68k-faq
[Germany]
or as "FAQ" on most Linux/m68k FTP sites (see the above web pages for
links to the main FTP sites and their mirrors).

* The Motorola MVME kernels are available, courtesy of Richard Hirst, at:
http://www.sleepie.demon.co.uk/ [United Kingdom]

* People interested in helping with the Macintosh port should visit:
http://www.bates.edu/~rpelkey/linux-mac68k/ [USA]

* The central repository for Linux/m68k is located at:
ftp://ftp.uni-erlangen.de/pub/LOCAL/680x0/ [Germany]

Major mirrors include:
ftp://tsx-11.mit.edu/pub/linux/680x0/ [USA]
ftp://ftp.phil.uni-sb.de/pub/linux-m68k/mirror.erlangen/ [Germany]

A more comprehensive list of mirrors can be found as README.MIRRORS on
any Linux/m68k FTP site.

In addition, most comprehensive Linux CD-ROM sets include a copy of
this archive. (Check for whether a copy of tsx-11.mit.edu is included.)

* The 1.3, 2.0 and 2.1 development archives are located at:
ftp://sunsite.auc.dk/local/os/linux/680x0/ [Denmark]

* Usenet Newsgroups:

There are two Usenet newsgroups devoted to Linux/m68k.
news:comp.os.linux.m68k is an appropriate forum for all Linux/m68k
discussions in English; German-speakers may prefer to post in
news:maus.os.linux68k (if available at their site).

Some Linux/m68k discussion is also found in news:comp.unix.amiga and
news:de.comp.sys.amiga.unix. You may also be able to get

news:saar.lists.linux-m68k at your site; this is a mail to news
gateway for the Linux/m68k kernel developers' list.

* Some Linux/m68k users and developers hang out on LinuxNET, an Internet
Relay Chat service. Join us there in #linux68k; the main server is
irc.blackdown.org port 6667. [USA]

HI
I have been trying to install HSMODA07. so far i see no speedup in data transfer at all, but in my modem cpx, i still cannot select speeds higher than 19200 BPS.
There is also a PRG called DRIVINSA included with HSMODA07. I cannot find any info on this PRG and i have no idea what it does. Can someone clue me in??
I am using a FALCON030 270meg HD 4MEG RAM.

Thanks

2907. Atari TT030 System - Parting out (with a catch)

Newsgroup: comp.sys.atari.st
Date: 1996-11-17 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <56p24m$1l3@kendaco.telebyte.com>
Source record: 133845

Parting out my entire Atari TT030 System. Pieces and prices are as
follows; make sure to read the notes below:

1. Atari TT030 with TOS 3.06, revision "H" $875
motherboard, 4 Mb ST RAM, 16 Mb TT RAM,
HD floppy, 290 Mb internal Maxtor HD,
48 MHz CaTTamaran accelerator
2. CTX CMS-1561 15" multiscan color monitor $250
3. Quantum 345 Mb HD w/case & power supply $180
4. ICD Link SCSI Host Adapter $ 40
5. Indus GTS-100 3.5" DD Disk Drive $ 50
6. Golden Image hand scanner w/scanning tray $ 50
and Touch Up 2.5
7. ST Replay sampling cartridge with DMJ-Soft's $ 35
Sound Lab 1.1 (registered)
8. SupraFAXModem 14.4 w/Caller ID $ 55
9. Microsoft Mouse II bus version with $ 50
bus mouse adapter (use any PC bus device
device as an Atari mouse, w/o driver software!)
10. Appoint Serial mouse pen with serial $ 25
driver software

Notes:

- TT030 comes with Atari Works, WordPerfect 4.1, Breakthru 2 (MIDI),
Straight FAX!, XBoot III, Diamond Back 3, Data Diet 2.0, Invision
Elite 2, STeno, Gram Slam, Imagecopy 4.0CD, PageStream, Bitmaker,
MegaKern, Mountain Reader II (registered), Cardfile 4.06, STalker 3.05,
MaxiFile, Warp 9 3.81, Speed of Light 3.8 (registered), lots more!

- Price of all items includes shipping in continental U.S.; buyer is
responsible for COD charges.

- All prices are "OBO", but prices other than listed above will not include
shipping and insurance.

- Important point: I _must_ have a buyer for _all_ items before sales are
considered final and any items are shipped! Offers should be submitted only
on the understanding that they might be cancelled unless everything finds
a buyer.

Please send offers to mparrott@kendaco.telebyte.net or call Mike at
(360)830-2277. Thanks!

I have the demo and I must say that I am impressed. It is one nice program with many many options. I get no sound, but I can still see just how good the program is. It is nice the soundcard for it goes in the VME bus in a Mega STe, TT or Hades TOS clone. I was not sure anything would be made for the VME bus.

Neil, in Magic4 manual (somewhere, I can't find it again -- an index is absolutely required!) it is implied that the APPS folder is to be inside the AUTO folder. I _think_ that ACCs or other progs that you want in the background, eg ImageCopy, may be put there, but don't quote me: I daren't even try it :)

My own problem is "Install Application" crashes every time.
2 bombs with "6800 Error 69", whatever that is (which occurs with distressing frequency - as does "System destroyed").

>times I was down to around 300K. This is on a 4Mb machine (well okay, with
>my usual installation I'm at 1.2Mb after booting). Is this a bug?

Dunno!
Charles.

: George E. Hoffman III (geh3rd@exis.net) wrote:

: : I am looking for some help with a Pak 68/3 I just installed in my
: : MegaST4. It seems to work fine in SThi rez but in STmed rez there
: : is no blue. This makes all that should be black, yellow (red+green).
: : Hard to read to say the least.
: : The roms are labeled 306E-Uxx. The sys info prg. reports a UK version
: : and os_conf has $7 in it.

Hmm, if i remember right there was something with the set_color
routine in the patched pak3-tos306. I think they needed space and
removed it. Since most people tuning their hardware are using
nvdi for further speedup they get a working set_color in nvdi
and don't miss the original one. Perhaps i'm wrong.

Has anyone noticed the bug with the two-bomb
routine? Everytime my PAK3/TOS306-ST tries to crash with two bombs
it locks up. The exception vector 2 (the one for two bombs)
points to nirwana, even if i boot the machine completely naked
without any tool or accessory.

Ciao,
Till

From: arthurm@zetnet.co.uk
Message-ID: <848444592_OASIS_@zetnet.co.uk>
Source record: 133670

Help.

I've got a Fujitsu hard drive of inderterminate size - too big for my STFM to handle in anything but a large number of lumps. It's partitioned C to P with a bit left over. It's not caused me trouble before, and it still runs everything OK.

BUT, when I highlight the Drive J icon and click on Show Info, I either get an immediate reboot or a two or four bomb crash. last time I got two bombs, then four. All I want to know is how much memory I've got left on the blasted thing. It only happens on that one partition. Any reasons?

I managed to get it to save this. Tell it to save preferences, or whatever.
For me, it created the file in the root directory of the drive I installed
it on. I just moved this file into the directory where Webspace was, and then
ran it, and it started up with the selected fonts. :)

>select speeds higher than 19200 BPS.

I don't think you do, least not on the ST anyway. You use the hsmodem
setter program to specify which currently selectable rates will really
mean the new higher ones. Most people use the 3 lowest for 38k,58k,
and 115k.

> There is also a PRG called DRIVINSA included with HSMODA07. I
>cannot find any info on this PRG and i have no idea what it does. Can
>someone clue me in?? I am using a FALCON030 270meg HD 4MEG RAM.

drvin needs to be placed before scc in your auto folder. Try that
first and if it doesnt work drop scc.prg onto setter.prg which will
let you mess with the configs.

Message-ID: <848436256_OASIS_@pcc-uky.campus.mci.net>
Source record: 133719

Well, basically, I find myself with 2 Falcons, and I only need one. I was going to use the 2nd one to run a BBS, but I've decided, after much hard thinking, to continue to run my BBS with my current hardware/software. (I am going to upgrade the hardware though) Anyways, so I have a truly wonderful Atari Falcon 030 with TOS 4.04, 4 megs of Ram, and a 340 Meg hard drive. Everything works fine, no problems at all. Does -not- have the original software that came with hard drive-equipped Falcons but I'm going to throw in lots of PD stuff...

So, I'll take the best offer from $325.00 on plus buyer pays S & H...
E-Mail would probably be the best way to reach me...Thanks! :)

I just wanted to clarify this paragraph a bit, as it makes Geneva sound as though it only supports six desk accessories at once. The number of DA's you can have at one time is limited only by free memory. You could have 100 if they were really small :-). Not only that, you can load and unload DA's whenever you want, without having to reboot.

Try Lview Pro, Fred. It handles every file type I've been able to throw at
it so far; it can handle PCX files, and will allow you to manipulate the
color map as well.

The other alternative is to use the Unix program "lynx". This is a program that runs on the remote computer (not the Atari), and uses a VT100 display to show you text-based Web pages. You can also use regular ftp or ncftp with STalker. Again, these programs run on the host computer.

Mario,

Try using "FIND = CONNECT" instead of "WAIT 1" - every modem ought to send a
"CONNECT" message as soon as a valid carrier is detected. Anotehr option is
"FIND = CARRIER" if your modem is set up for that.

the way demon's customers web servers work means that there is a delay
from me uploading my pages to them becoming available for access..
Sometimes hitting the reload button fixes this but most of the time it
doesn't.
Anyway hopefully it should be available now.

I did spot a little typo in the filename for Cab 030 though <oops>
sorry to thiose having problems downloading it.

Tonight I have also uploaded newsie 0.64 (newsie64.zip)

hope this help's :)

Nick.

For this to work you do need to have 'start ftp' in your STARTUP.NOS
(or typing it at the 'NET>' prompt) and also have an FTP users file.

Source record: 133737

I'm setting up a UUCP gateway. I have Upoint Light working nicely, but it won't run in unattended mode and exit after a poll; Mercury apparently won't connect if the server requires more than 2 prompts (mine requires 3). Okami doesn't poll at all, it's a reader only. I haven't tried Hermes yet. I got hold of a stand-alone UUCICO that might possibly do the job, but the docs are all in German and my German is so rusty it makes the Titanic look freshly-painted.

I am not even going to consider MiNT, as it totally screws up my environment no matter what I do, so Jetmail can't find its config files.

Can anyone advise me how to proceed further? I tried email to the author of Upoint - bounced, "host does not poll" so that route is closed.

This is currently stalling the Atarinet/Nest Internet gateway in the USA. I really want to get this thing going, but I'm stuck...

Don't know if there are any actually made and sold in quantities. You all know how Atari was, 100% R&D and 0% marketing :)

If you really need to use ST programs on a notebook, then get a PC compatible or PowerBook and use Gemulator or MagicMac. And brother, they run the stuff much faster. :)

Being the "STOS" man, you sure outta know about coding in STOS. But at least with stuff like Missing Link, I was able to get far into it than I did before and that was for about two years.

Anyway, try writting a game like Heartland in nothing but machine language. AhHA!! :)

BTW, is it just me or is any C compiler on the ST a big pain to use? :P

If anyone doesn't remember, awhile back I was debating(?) with Peter Sinclap about still not seeing a viable PPC desktop that runs Intel programs. He tried to upped me one by saying they have workstations out that hase the PPC running Windoze NT. But you can't exactly go to Wal-Mart and buy one of those can you?

After reading about what PPC can do when it first came out, I have been awaiting for such a machine to compete with Intel in terms of running DOS and Windows programs. IBM was even planning to have an on-the-fly Intel to PPC translator chip. But to this day, I only see PPC's on PowerMacs.

If what you say is true, working for Apple and all, then I can't wait for this machine to actually be sold on store shelves. And I bet by some means, it can run ST programs as well :)

: (I think) and I would like to use it in connection with my Atari Mega STe4
: (which has a 48 MB harddisk). What things would I need to buy, build and
: connect for this hardware adventure? Doe anyone have suggestions?

Firstly and most importantly you need to say if the HD is an IDE or a
SCSI device. If it is a SCSI device then you are in luck. If it is an IDE
(or RLL or MFM drive) then you are out of luck.

A SCSI device _should_ be able to be daisy-chained with the 48 Mb drive.
You may need to buy a SCSI 50-way ribbon connector with two drive
connectors on it. You will also need to see if there is enough room left
in the Mega STe drive bay to fit the second drive. Finally you will need
to get power to the new HD. I'm not sure how to do this.

Hope this helps...

From: rich@rjelwell.demon.co.uk
Message-ID: <848347384_OASIS_NEWS@rjelwell.demon.co.uk>
Source record: 133747

I have noticed a HP ScanJet 4P flatbed scanner not doing much at work
and was wondering if I could use it with my Falcon.
Being a SCSI device I know that I can connect it to my Falcon but I
am not sure if software exists that will work with it. Most scanners
for Ataris have used the cartridge port.

Do you know of any appropriate software?

Rich.

d> bad clusters (from 2 to 16) on each disk when formatting which others
d> do not seem to get, but the data seems secure enough (this is using
d> HDX 5.04).

If it's consistent I'd reckon it's a driver problem. You're b****y lucky that
earlier tracks got laid down OK.

Have you tried another driver/formatter combination - your ICD for instance?
(When you have recovered your cool)

d> The only panic was with the termination, I had set it to on on the
d> ZIP which everyone recommended, and then the decent into hell
d> commenced....

Is this 'cos the ZIP is attached to the SCSI THRU port on the back of the
MINIS? I suppose, in theory, the MINIS should have had its termination
removed. You know "terminate last device on the bus only".

d> A scrary 24 hours though!

I can imagine :(

Oops, I ment to say that...but even without any multitasking OS running,
you do get a form of running up to 6 DA's and a GEM application at the
same time using SingleTOS.

I found this out reading from an article they had in Current Notes, and
that's how I can not only use Stalker and Steno together but play a
Breakout game while downloading. Thanx Dan for such wonderful programs!
:)

(BTW, it's a Breakout DA I downloaded some time ago.)

Eric,

Thanks for not flaming. Sometimes these groups get way out of hand.
Anyways, we all know that timelines are subject to delays but it WILL
happen. Apple has also announced that we will have desktops by the end
of '97 that will do the same (I have been waiting quite a long time
myself for such a box!).

Puhleeze!

The MacOS is a 68k application with some "Parts" in native code.

Are you telling me that you don't use MacOS on your PowerMac?

And as far as Apple goes...they have been announcing totally native
code MacOS for two years now, it was supposed to be out this Fall. remember
Copland? Where is it? Vapourware!!

It will be another year and a half before their announced Native Code
MacOS is on the streets, and this is just another announcement.

The MacOS is slow, even on a powerful chip like the PPC. Sorry to burst
your bubble buddy.

By the way, I think you are in the wrong newsgroup, this thread should
be in an advocacy newsgroup. Please move it there.

All the best,

Chris @ Computer Direct

I don't know how hard it would be, but it is already being done for the
Sega Genesis. Right now I can subscribe to the Sega Channel from my
cable company. They would give me a hardware device that plugs into my
Sega Genesis and I hook the cable to it. Then I can download and play
as many games as they have on the cable each month (about 25).

From what I was told once there were no ST Books sold in the U.S. but there were 12 sold in Canada. I saw one in Toronto and one in Calgary and heard of another in Vancouver. I came very close to buying one. I will be running MagicPC on a 486/100 notebook (need Win 95) later this week. I can let you know how it goes. Let me know if you are interested.

Message-ID: <E12qnE.K9y@cf.ac.uk>
Source record: 133760
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

For sale:

TT VME-bus Matrix TC1208e graphics display card, THE BEST!!!

2MB VRAM, 135MHz dot clock, hardware zoom and pan

ANY resolution and colour depth can be programmed, depending on your
monitor. e.g. 32-bit colour (16.7M colours) in 832 by 624 pixels,
16-bit colour (65536 colours) in 1152 by 896 pixels, 8-bit colour in
over 1600 by 1200 colours! All with super high refresh rates, DEFINITELY
NO flickers or interlacing! VERY fast card and highly compatible with
almost all modern GEM software, MagiC and so on. Comes with special
NVDI drivers for even more speed, and lots of other software goodies.
Set up to work on the Idek 17" monitor but will work on any monitor
(standard VGA connector on back).

Turn your TT into something special! Do real photo editing, DTP in
high resolution with FULL colour! See photos as they should be seen!
Be the envy of PC and MAC owners! Get Lots more space on your desktop!
If your thinking of adding a graphics card to your TT, then one of these
will currently set you back ï¿½1000! Not to mention several months waiting
list and the time to sort out the installation.
This card has only had a few months use, so its practically brand new.
What's more, its setup and ready to use!

But the best thing is... you can have it for just ï¿½575!

Interested? Then email Dr Simon Williams on spesgw@cf.ac.uk

> with STalker. Again, these programs run on the host computer.

You can use the Lynx browser to go on FTP sites and download files, much
easier than useing the FTP commands. You can only download one at a
time but you can do a straight Z-Modem download on your ST disk.

Yes, Stalker can be used as a VT-100 terminal for accessing text-only
shell accounts. If anyone wants to know, there is a way to make the text
colors nicer looking. I have green text, black background, blue desktop,
and purple highlight instead of black,white,green, and red in med rez.
I still get green text, but running the script with this command; I get
blue text and purple-on-green for highlight...

printf("\23332m\r\n");

This way, it resembles a multi-color ANSI screen on the BBS's.

Hopefully, I will be able to get a better modem and use the CAB/STiK
setup. But I plan to use STalker to dial in and get the SLIP connection
going which was shown how in a posting here. :)

From yet another happy Stalker user...

I would put money to the authors of this one, but it just doesn't run quick enough on a Falcon with 16Mhz bus (even with 32Mhz CPU). I play some AVIs from a x4 CD-ROM and even at x4 speed the screen update is very slow. Hard drive doesn't really improve things much either, and when a lot of movement occurs in the clip it seems as though the screen is taking about 1/4 of second to update.

:
: Ehhh.... are we using the same program? Okey I have a 040 in my Falcon, but
: I had no problems what so ever reagarding speed.

An 040 would help I guess!! Yes it is very slow IMHO.

: Which MOV files have you found that are causing frames to be dropped?
: Could you point me to one that is less than 1.4MB so I can get it home
: on a disk.

I have a CD full of AVI files (of an *ahem* adult nature!). They are
mostly 240 by 180 or so. Even ones at 160 by 120 drop frames when trying
to sync audio. Also, when playing large ones (15-20 Mb) the audio gets
out of sync with the video (or vice versa?) after a while. This could be
because adding a ninth bit to the 8 bit sample is not quite like going
from 44.1kHz to 49.2kHz. It goes to about 49.6 and the audio falls behind
slightly after a while...

: I can't belive that a 16MHz 030 MAC could do it better! As you said it doesn't
: use the DSP so it's a great piece of work and does the job very good indeed.

I wish it did use the DSP, but even if ALL frames could be decoded by DSP
in time to display, I wonder if enough bandwidth is left in the Falcon to
be able to get the decoded video stream to video memory in time before
the next frame is due... :(

> I am using a FALCON030 270meg HD 4MEG RAM.

Hi Al,

If you want the cpx to read the true bps speed then you might try switching
to the FSERIAL program and CPX. It's available at CNAM in the Telecomm folder
(I think). To install you put FAST_SER.PRG in your Auto folder and FSERIAL.CPX
in the CPX folder. On your Falcon you can then set bps to 57600 if you want.
It's in German, but easy to understand and a bit faster than HSMODa07. Falcon
only, of course. If I remember correctly, its called fser096.lzh at CNAM.

I am sure it does.. I doubt that Powermac users have alot of 68k apps in their
system..

I hardly have any 68k apps in my system..

As for efficient PPC software, I suggest you long onto Ambrosia's software web
page for kick ass stuff.

Ha ha ha ha ha.. PPC hardware is much cheaper than a $2600 060 Hades.. The
Powermac users I know hardly have any 68k apps in their system.. Strickly
native apps baby..And that will blow away the expensive 060 gig..

And you asertion that you need to spend 5-6 grand for software is absurd..Maybe
in your neck of the woods, not were I am at. All the important software are
strickly PPC native. Few come in the 68k flavor..

hello Mario,

in msg <GKPUEGUQUp@tos.ak.planet.gen.nz> you
said you had trouble finding Okami. Well, there's version 0.26
at ftp.cnam.fr/pub/Atari/Telecomm (look for 'o_026.zip').

informations pertaining to this SOUP-packet reader can be found
on the maus.sys.atari.okami ng (i use gopher on hp2.rz.uni-rostock.de
as Hallvard explained a few weeks ago), which is mostly german-speaking,
but sometimes you get english threads. some mentions of 'improved 026'
versions were mentioned a few times...wihtout url or ftp@ though :)

sorry don't know where to find StarCall/Fax.

bye

fab.

>But surely this isn't a problem with faster machine like TT.

If hsmodem is loaded before MiNT it surely replaces the interrupt routines and
MiNT has same kind of (or I think it's oppisite) routines to write and read
data from serial port. Altought not that fast as hsmoda but fast enough.
It's just a matter of protocol to support these right. I've ported HydraCom
and when sending and receiving files at the same time on my 16MHz ST with
14400 modem the system is still usable. Top shows only 12 % usage for Hydra.
Thougth interupts are not counted to that but still...

Change the settings then. Under one of the menus there is a Thing/Win95 style layered menu system. One of the options lets you change the fonts for the main body (but doesn't seem to effect headings?). OK Button doesn't seem to work, but if you close the window the settings are preserved anyway.

The menus mention Stik, Mint-net and a couple of others (Lantos or something?
Isn't that the network driver for Ataris?) so I guess that it will (as MiNT-net
supports PPP.

It seems ok to me - much more stable than CAB, but doesn't support as much as
CAB. (CAB crashes when viewing AES.HTM from Atari Compendium CD, where as
Webspace doesn't. However Webspace doesn't support backgrounds, and seems to
have problems with the HUGE tables used in AES.HTM...)

I haven't used either online.

Hi Gerad,

What settings do you have in the DEFAULT.CFG fot the packets etc.

it should be a minium settings like these below.

```
TTL = 64
PING_TTL = 255
MTU = 1500
#MSS = 212
#PKT_SIZE = 256
DFB_SIZE = 580
RCV_WND = 5360
UP_RESPONSE = 2
```

Regards

The ST Book was released but not in quantities...
You can find it in France (with a french keyboard, of course :) at a shop
called "INFORMATIQUE ET NATURE" in CAVAILLON (south of france).
You can also find it in germany (and it is cheaper than in france!) and
in spain. (but, I don't know where :-( )

I tried it, and it is REALLY a very good computer!

If money is no object, upgrading from AtariWorks to Papyrus will
give one an even better word processor, & I have had no trouble with
margins (very flexable) or extra characters.

2993. I was rude & angry 'bout CAB

Newsgroup: comp.sys.atari.st
Date: 1996-11-19 00:00:00 UTC
From: Mark Gardiner <100550.3170@compuserve.com>
Message-ID: <961119202001_100550.3170_EHK47-2@CompuServe.COM>
Source record: 133626

Yes... I'm sure you all saw... well good reason too and others are experiencing the same trauma.

Stop messing about. I Cab 1.4 and ovl. 1.18 if it won't work - ditch them now cos they obviously won't on your machine.

Get the later 1.5 and 1.2 respectively. Place them on the root along with Cacheed and yes, HS Modem 7, *but* in the auto folder as instructed. Create a folder called Cache. somewhere.

StiK is usually ok when the login script is set - The main probs are CAB/ovl.

I spent over 5 weeks pissing around and eventually ditched the earlier apps.

... ALSO IMPORTANT - When you get up and running with CAB, keep pressing the esc key when the download looks as if it's stalled and if after a few mins and a reasonable throughput of bytes it sticks, press the esc and left mouse button. A dialog saying Abort Cab? will pop up. This will only Abort the download not the session. Say yes and you get what's in the cache. Say no and it will keep filling up 'til its ready to display.

Now you should be on the right road...

I said I would eat my words, well as the earlier software was buggy, I think I'm let off that one. Hopefully this admission will help others...

Mark.

2994. PCX Conversions...

Hey, Stop mucking about trying to get an 'Atari' PCX to an 'IBM' PCX.

Get hold of Graphic Workshop for the PC - there's DOS and Win versions.

http://www.shareware.com

Convert to your hearts content 'tween Gif 89 and 87/Jpg/PCX/IMG/BMP/EPS/WPG... there is going to be a compromise amoungst this lot. I Know cos I too needed cross platform compat: and it's been a brilliant tool. I swear by it always and never at it...!

Mark.

2995. Choice between JAZZ,ZIP,MCD,EZ s,...

Newsgroup: comp.sys.atari.st
Date: 1996-11-19 00:00:00 UTC
From: Paul.Muehlbauer@flight.org
Message-ID: <27f_9611200105@flight.org>
Source record: 133628

TL> : I've heard of these units: : JAZZ, PD/CD-ROM, MCD540,
TL> PCD-2000, ZIP SCSI, EZ flyer 230, HS650, Syjet.

TL> The EZ flyer 230 is made by Syqyest, and is the followup to
TL> the EZ135 (although Im not sure if it's actually compatible).

I understand they are compatable, as in, the 230 will read media
from an EZ135.

TL> I don't know about the next two.

The Syjet is Syquest's answer to the Jazz. It holds a bit more than
the Jazz, and I've seen it a bit cheaper than the Jazz. It has just
been released, but I assume it works with Atari?

TL> Depending on how much money you have, you should probably go
TL> with the JAZ ($500 US) or the EZ Flyer (probably cheaper).
TL> Both Syquest and Iomega will continue supporting their
TL> products.

You might still find an EZ135. They have been discontinued, and have
been sold out very cheaply. Syquest should support the media for
some time yet. It also depends if he wants to work with DTP firms,
or MIDI equipment, etc. Each one has it's favorite system, and to
share data or work with a service, it's best to go the same route.

> (be aware of the prices too.)

My dear Ms. Ellis, I would *love* to say that Atari makes and sells these portible ST notebooks which are so perfect for having a MIDI computer on the road. Heck, I read an old article in ST Format that details the ST Book and it is very impressive.

But, as we all know, Atari dropped the ball. They blew it with the ST computers even in Europe and they *really* blew it with the Jag.

What would be cool if C-Lab could pick up the design and all and come out with a ST book of their own and revitialize it much like they did with the Falcon. And the C-Lab does the Falcon much better than Atari! :)

I saw a recent article in one of these newsgroups stating
that there were/are TT's for sale with 4 megs and 40 meg
hard drives for 135 dollars. Me, being the stupid idiot that
I am, completely disreguarded the article not realizing how
cheap that really is. So if anyone knows of TT's this cheap
or knows where this article is, I would appreciate some help.

Also: I have a Mega ST/4 and I would love to upgrade the video
I have heard of the ET4000 upgrade and the Panther card..
Both are essentially the same thing. The Panther card
costs 200 dollars at my local atari store.. (this is too much
of course) and I would love it if somebody had a processor
direct video card for sale used or new that was SVGA.. Thanks
alot for your time

>Regards
>David Beards

David,

Nope - you only have one modem line and if is busy, it is busy. I have successfully, with MagiC 4 (TT030) downloaded large files on a slooow night and gone into AtariWorks and done work, however. You do have to configure MagiC 4's time/slice to favor the backgound program more, so you don't lose the connection. A 1/10 ratio seems to work for me fairly well. With the Falcons slower clock speed, I don't know how well this would work :).

Regards,

Steve Hammond

Is this for real or blatant denial? I am running native apps. 95% of the apps on my HD are native and completely destroys the 68k ones on the Quadra. What do you not understand? The PPC chips, the 603e and 604e slaps around the 060 silly and just destroys it performance wise as well as cheaper to boot.

> Further, I expect even better results once our software authours(many of

Of course you can't get the big name apps to develop so you bring in the lone author and how he/she in their spare time out of affection for the platform, whatever!! We have those to..Ever hear of Ambrosia Software?

:

This may be a stupid question...coming from a non programmer...but
why couldn't one put in wait states so that audio and video wait on each
other before running out the door? I.E. If one is faster than the
other...slow it down...perhaps treat the data in packets where it is
first processed/synced, and while being displayed, the next packet is
processed, etc. One would actually see the computed results seconds after
it is really processed.

|> system..
|>
|> I hardly have any 68k apps in my system..

If you are no Betatester for MacOS 8 (Copeland), then your OS runs in 68k-Mode and this efficently slows your machine (I know what I'm talking about, I'm using different Powermacs at work, but most time the Quadras with 68040 are as fast as the Powermac, because for most programs there is no difference in the working power of a 68040 and a PPC. All they need is fast redrawing of Windows and so on, and this is done by the OS.... Only programs which are native need much power (like a raytracer) are really faster on a PPC...)

From: bjr@edison.ebicom.net
Message-ID: <56rshf$pi9@einstein.ebicom.net>
Source record: 133685

Aloha,
I've a standard Falcon 030 with the Atari issue 14meg memory
board (not simms). I'm thinking of upgrading this falcon and would like
some info on the FX card. First...I'd like to know if I can still use the
14meg of ram I already have (realizing this is not FAST RAM, but I'd
rather not have to re-invest in memory at this point). Next, will I have
to get a larger Case or will this card fit inside the standard Falcon
case? Finally...how much does the FX cost??? (US Dollars)
Any other comments???

Thanks,

3016. Re: Questions About FX Card

Newsgroup: comp.sys.atari.st
Date: 1996-11-19 00:00:00 UTC
From: Katherine L Ellis <kellis@primenet.com>
Message-ID: <Pine.BSI.3.95.961119064843.965A-100000@usr09.primenet.com>
Source record: 133688

Hi, Get the centurbo II. You don't have to change your case. You can
still use your RAM. And it is very cheap (around $150).
The DSP, the CPU, the BUS, the VIDEL and the FPU are accelerated.
Meaning that you can do up to 1024*7xx in 256 colors or 640*480* true
colors without any problem and at a good speed.
The centurbo has a better compatibility than the FX card. A lot
better.
The bus is 25 mhz, the cpu 32mhz, the DSP/FPU at 50mhz. And the videl
hmmmm I don't remeber..:(
The good thing about it are the price/compatibility and no graphic
card needed to get a good resolution at a good frequency.
Also, the fact that you can fit it without expanding your falcon case.
The FX card seems to be faster (not sure though), and the FX accepts
fastram which is really cool.
The price is not the same too..
If you go for the best cheapest one go for nemesis/Centurbo II.
If you want a really good one, get the afterburner. ;)
Also, the afterburner can be added to the nemesis.... (centurbo I am
not sure)
And to finnish this, the centurbo II requires 9 wires to be soldered.
That's all. Everyone can do it. (or almost)
The Fx is pretty cool though but a lot of ppl would find it a little
bit pricey for the performance/compatibility.
Ohh I forgot.. The bad thing about the Centurbo II is that you can not
find it in the US. You have to order it in france, at Centek. The
company that makes the phoenix40/60.
And they don't plan to export this card nationwide. You have to ask
them. (as far as it goes)
Bye..

The Apps folder can be called anything you like (mine's called START)
and located anywhere you like (mine's in GEMSYS but could just as easily
be in the root of drive G) because you set the path for it within
MAGX.INF. I can't remember the exact details of this (old "at work with
no access to manuals" excuse is trotted out). Then MagiC knows where to
look and will load all executables within that folder. Hope this helps.

I am trying to find as many arpeggiators as possible.

Any addresses for ftp sites or WWW pages where apreggiators can be obtained would be helpful. I would also be interested to know what arpeggiators people actually use and people's experiences with them.

Thanks for any help.

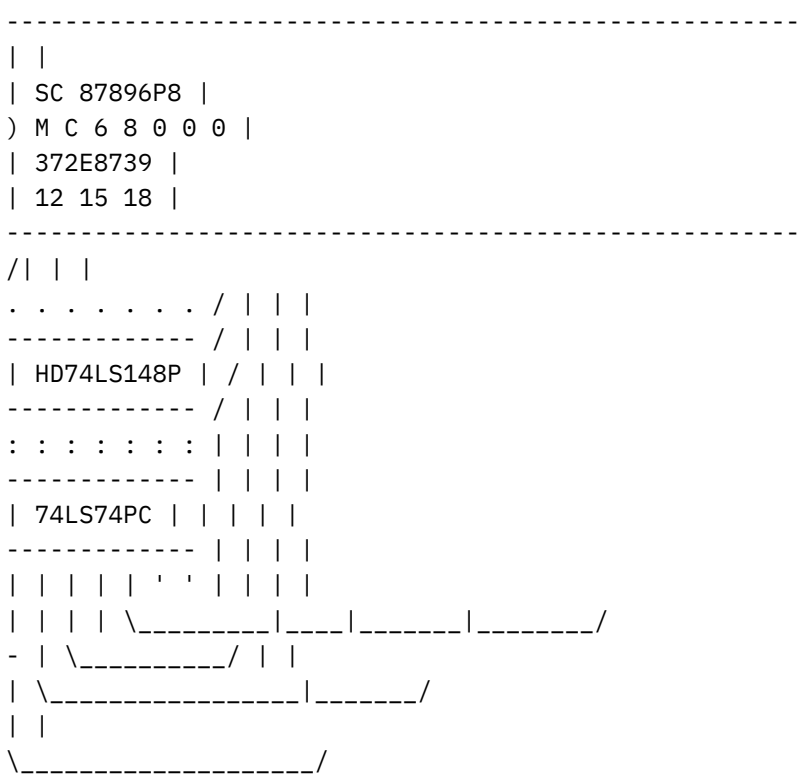
A computer club member has recently obtained an Atari Mega ST and has noticed some kind of modification that has been done to it. I noticed a similar modification on another Mega ST.

Here is a rough ASCII copy of the diagram sent to me:



The person notes that "the soldering does not look to be professionally done."

Any ideas as to what this modification is for would be much appreciated.

m > Did IBM ever made a PPC computer compatible with Intel
m > programs? And don't tell me about corporate workstations, I
m > mean something you buy at a store in the mall.

now Eric, you know a drooling PPC fanboy like SinClap isn't
going to answer that question regarding his favorite overpriced toy
if he can't put a positive spin on it. He STILL hasn't given me a
straight answer regarding the availability of CorelDraw for the Mac
after he tried, in his feeble attempts to dis Calamus SL - a DTP
program he admits never having had his hands on - to denigrate it
further by calling the upcoming version "vapourware".

Yes, SinClap, I know CorelDraw for Mac has now been released.
Now I want to see the PPC version, not the one that runs under
System7 emulation :) I await your Limbaughish explanation for THIS
one.....

(and I've gotten a sneak preview of Calamus SL's next
incarnation - needless to say, Atarian DTP users are going to be
REAL impressed with the update......)

if you don't need the software for BBSing, or Internet access
definately check out CoMa. latest demo is 3.5 I think.
It can do voicemail, ftp(you at a seperate site to home), mailboxes, fax, etc
check around for the demo, and the included text file tells you what kind of
modem you need.
good luck.bonne chance

Well, I got it and tried it for 3-4 hrs. It seems to run fine
even with the 1.20h cab.ovl. That's something I couldn't say for the
regular cab1.5!!! Nary a bomb or #163 or #204 error in all that time. I
didn't run any timing tests, but qualitatively it does seem much faster.
Sooo, if you have a TT or Falcon, GET IT!.
BTW, It is now correct on flinny's page. And on Alex Clauss's page.
Good work. PLEASE release an 030 version whenever the next update is!!

Well Colinfm is using the same version of HDX and has no problems at
all, so I just think it's this Falcon's dodgy SCSI. The disks to
appear to work perfectly so far with no data loss or corruption.

>Have you tried another driver/formatter combination - your ICD for instance?
>(When you have recovered your cool)

Nope, as both ICD and HD-Driver suffer from SCSI problems on my
Falcon.

>Is this 'cos the ZIP is attached to the SCSI THRU port on the back of the
>MINIS? I suppose, in theory, the MINIS should have had its termination
>removed. You know "terminate last device on the bus only".

It runs Falcon->MiniS->CD-300->ZIP no devices are terminated. I
remember now having similar problems when I tried terminating the
CD-300!

>I can imagine :(

Bet you can't mate, worse than normal corruption, as the corruption
kept on moving!

For my next purchase to fill up my external SCSI case, I've been wondering whether I should get the Syquest 270MB or the Jaz (1GB) drive. I'm not in the least bit concerned about carting them around, as they'll be installed in the case anyway, nor do I care about sharing them with Macs or PCs. I would like to know if anybody has recommendations for one over the other. The Syquest is (obviously) cheaper, but the Jaz could be used to back up my 2GB hard drive fairly easily. (Oh yeah, another thing: does Diamond Back 3 backup to either/both of the above drives?)

>The future of Atari isn't as bleak as you suggest.

Obviously I agree with you, seeing as I'm willing to spend so much hard-earned $$ enhancing my Falcon MK-X! :^)

Hi Brian,

The FX Card fits into the standard case. It has 3 expansions on one card.

The fast RAM expansion uses 30 pin SIMMS, either 1 or 4Mb and any
combination of these chips installed in pairs. You do not need to
install memory in this card to use FX.

The accelerator portion is quite good. Excellent performance increase
for the dollar. The CPU, Bus, FPU and DSP are all accelerated with
a CPX panel to control the speed and change it on the fly. Most falcons
can achieve 40MHz CPU/Bus/FPU and 50MHz DSP with this card.

BlowUp Hard Internal is also included for higher video refresh rates
and of course resolution.

Cost is 249.99 US.

All the best,

Chris @ Computer Direct

3036. WTD: 520 ST games on disk (Holland)

Newsgroup: comp.sys.atari.st
Date: 1996-11-19 00:00:00 UTC
From: Lazy Man <ewok@worldonline.nl>
Message-ID: <01bbd65d$061d32a0$1988099a@perfectsmile>
Source record: 133708

Hi,

I am a collector of home computers. My latest is a Atari 520 ST. Has
anyone games for this system(not original expensive games....I'm just a
student)?? I'm located in Holland (Europe). Can someone help me with games?

Greetings,

Jack

> 1/4 of second to update.

Hi Chris

I think you're hardly being fair here.
The Falcon version isn't a specific version for that machine as it
doesn't utilise the DSP at all.

So have you seen your AVI's play on another machine ?
Try playing it on a 386sx with Windows and see what you get.
The 1/4 second update is odd.
What does happen is the MPLAYER plays frames in sync to a clock and if
the frames have not been played they will be skipped and it will jump to
the next batch of frames.

If you are playing high rez AVIs this slows everything down seriously.

The WEEZER.AVI (31 Mb in size) from the Win'95 CD plays approx 73% of
frames in colour, full screen on my 16 Mhz Falcon from a 2x CD ROM.

The program was well worth my ï¿½7 reg fee ...

That's life. If you have magiC only 3 days i'm sure you must ask
people thay was have magic for a long time..
You can't found any help in the manual.

>times I was down to around 300K. This is on a 4Mb machine (well okay, with my
>usual installation I'm at 1.2Mb after booting). Is this a bug?

I don't no. I have 4Mb st-ram and 10Mb fast ram.
Sure, with only 4Mb you can't have more as ~~2.5Mb Ram

I don't no what kind of application you have.
By me self i have some old apps with the same problem.
After finish of some old apps i lost ram..

(That's a problem by old apps, after start that app. it takes a lot of ram.
By close down the same app will not free all required ram..

(Start that app at 2-3-6 times and you got a nice crash!)

regards, robert

Hello people,

Anyone know what the following is?...

It connects to the cart. port on a ST, approximately 2 inches long (counting the PC board connection), about a inch an a half wide, and about a 1/4 inch thick. Its hard black plastic, with a small white label that says "Please Insert Key This Side Up".

I'm thinking it's a copy protection cartridge for a program. But not sure. Any help is appreciated.

>well this would work :).

Not true I'm afraid :)

There's no reason why you shouldn't be able to do news,email,finger,irc and
browse all at the same time. The data gets sent in packets which get
assembled at your ST. These packets could be requested by any STiK client and
when they arrive STiK should forward them to the relevant program that
requested them ie. cab or newsie etc.
I say should because I've not actually tried it on an ST with STiK. But
certainly in Oasis2 I can send/receive email whilst receiving/posting news
articles. Also on a pc you can receive news/email whilst browsing the web (do
it all the time).

Of course you are sharing the connection between the processes. so of course
if you're ftping a large file and browsing at the same time then each will
take longer. Exactly the same principal as multitasking with a single
processor (the processor is shared between tasks and thus each task could
take a little longer).

Hope this clears it all up :)

Gary.

Source record: 133715

I was wondering, if someone usesa Spectre GCR, would it be possible for MiNT to utilize the Apple ROMS to support Mac HFS, AppleTalk, MacOS development and AmigaDOS XFS systems? Shouldn't it be feasible for a GCR equipted MiNTOS system to be able to bring about a Mac HFS partition and run Mac Applications the way that MacMiNT users can? They can also do MacApp development via the MacMiNT GCC environment. MacMiNT development seems to be improving whenever a new version of FreeMiNT arrives. Perhaps some developers can help to make a "ShapeShifter" and UAE: Unix Amiga Emulator (environment) for GCR equipted '030 or greater MiNT system.

>launch into say, newsie or antmail and check mail?

Yes.

A fundamental part of STiK's job is to receive data and be able to
work out which "packet" belongs to which "socket". Each client opens
one or more sockets and receives data totally oblivious to the fact
other clients may being doing something similar.

It doesn't actually matter where it is, just change the _APP variable
in magx.inf to point to the path. I have mine set to D:\GEMSYS\AUTO
for example (cant remember if there's a trailing '\' needed offhand).

Leroi est mort!

Are any other Falcon owners having trouble running the Webspace Demo?
I have a 14meg, TOS 4.04/4.92, AES 3.40/4.10 etc. running as single TOS
and all I get is two bombs and out when I click on webspace.prg...

I downloaded the demo from CNAM and the Kellis Web page. There are four
files in the folder: wecome.htm, webspace.prg, webspace.rsc, webspmon.rsc.

I've tried all the obvious things, clean Auto, acc's, CPX's, Video from 2 to
256 colors and all with the same result; two bombs and out to desktop :(

I have seen what the demo desktop looks like from the OXO Web page. However,
do I need to call Fox Mulder and check for Aliens?

C'est la Vie,

Charles

You are correct in that a busy line can't be "shared" between two
different telephone numbers. However, the original poster was asking
whether it was possible (using STiK) to do multiple net-related things at
the same time. The answer to that question is yes, since SLIP (and PPP)
are packet oriented protocols. Different programs can generate different
packets and send them down the same pipe, so you can (for example) FTP
and read news at the same time. Of course, doing anything interactively
(such as a telnet session) while FTPing will become extrememly annoying,
since the response time will be very slow due to FTP hogging bandwidth.

From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <h5D05QY.lmcclure@delphi.com>
Source record: 133579

In the December 1996 issue of "Electronics Now", All Electronics Corp. has Atari Jaguar controller/keypads for sale for $2.50 each, or 10 for $20. Shipping and handling is $5.00 per order for the continental U.S, so unless you are ordering 10, you might want to check out what else they have available. They have a web page at http://www.allcorp.com/. They take all major credit cards.

-

At this price, if you have an STe or Falcon, it might be worth it to pick up a controller or too, just to expirement with. If you have a Jag or an STe game that actually supports these, so much the better.

Youkoso!

Konnichiwa, Oda san, Jim Desu. Yoroshiku!

There is indeed an atari faq available. Several of them. I don't have
the list in front of me, but Hallvard Tangerass has one at
http://home.sn.no/~hallvart/ . I'm not sure about the hardware
"bushing" unless it is the dictionary definition of an adapter.
"Interface" would be a better choice. Hope this helps. Feel free to
email back.............................j

Try the Web page at www.filez.com to find all sorts of software - not just
games - for the Atari. I assume you're looking for freeware and shareware,
of course.

You can find all of the FAQs at Hallvard's pages, and I have a link to the
FAQ sites at my page (see .sig below).

>And basically atari is used with hardware bushing or not, and how
>good atari's OS (TOS?) is.

What the Gates is a hardware bushing? Sounds like something used to keep a
shaft from wearing out too fast.

Answer:

Arpeggiators are little artificial organisms capable of
"traveling" inside the human body. They detect cancerous cells and eat
them by a process know as phagocitosis.

Or... maybe they are cells which act like gates and close
the stomatas found on the leave's plants so they won't loose H2O at
night... Well, I don't remember. Why do you want those eh? ;)

More seriously: Arpeggiators are usually found in sequencers.
Cubase has one (it's called midi processor though; check october issue of
electronic musician to learn how to use it) and I found a very nice
midi proccesing in Dr. T's KCS, it is about randomic generations of notes
called the PVG (Programmable Variations Generator) I used this last one in
one of my songs. (note: this two sequencers are ATARI!!)

The Seagate drive in the MSTe is too large to permit a second mechanism.
The Atari Host Adapter in the MSTe requires some hardware modifications to
support two drives, also.

A better option is to try to find a PC user who will swap a SCSI drive for
the IDE drive that is almost certainly in the dead PC - get one that's
bigger than the 48 meg Seagate in the ST, and simply replace that (if you
can find a drive that works with the Atari HA, also a problem).

Power for a second drive is easy, though - get a Y-dapter cable from your
favorite PC shop. Even Radio Shack sells them for around US$4 each.

>this?

Unless you happen to have a Schneider PC using a bus mosue with the 9-pin sub-D connector, you won't find drivers for it. The Atari mouse is a bus device, and the usual PC mouse is either a serial device (using a similar plug but totally different wiring scheme and voltages), or a PS/2 bus (small round plug looking like an Appletalk plug, also not vcompatible with the Atari mouse).

Best option: Give it up and shell out $10 for a new serial PC mouse.

MDF>Does anyone know if someone is planning on making an '060
MDF>card (similar to Afterburner, only with the new CPU) for the Falcon?

No. Sorry, there are no plans for that because although overscan sold several afterburners they didn't get the costs for developing the afterburner back. But perhaps the 060 upgrade for the medusa could work on an afterburner.

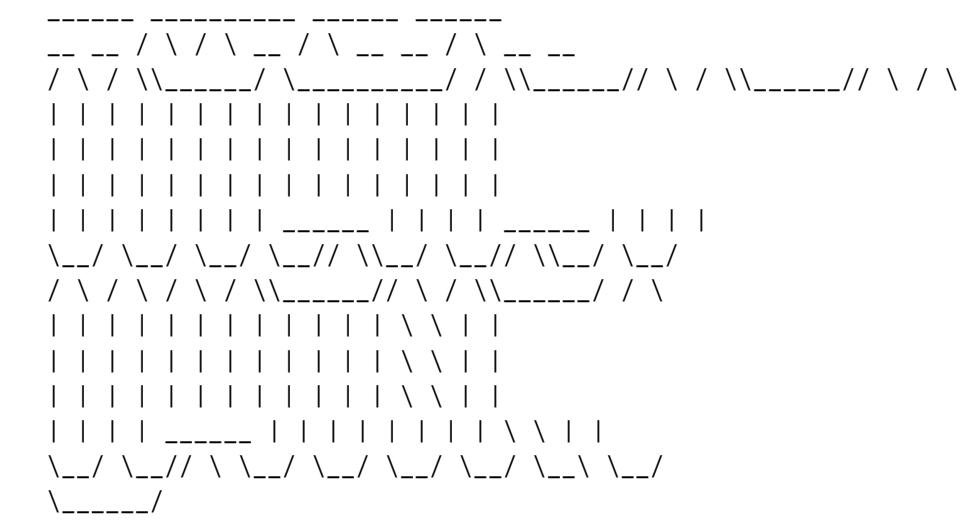
Thee Augean Stables Present:



The Atari Programmer's User Group

It's that time of the month again...

ICTARI 40 is now available on my web-page. Go to:

http://www.elis.demon.co.uk/ictari/ictari.htm

I've had a few new readers fill out the form on the web-page, from a variety of corners of the globe. No-one has mailed an article yet, though. Come on ! Filling out the form can pay off. One bloke added a comment that he didn't know of any Atari FORTRAN compilers. This is about the only area of Atari programming where I can call myself an expert, so I wrote a short article. Next month's issue might even come with a freeware FORTRAN compiler.

Due to other commitments, Peter Hibbs is stepping down as editor ! ICTARI 41 will be his last issue. It need not be the last *ever* issue. Suffice it to say, the job is up for grabs. If no more suitable candidates present themselves, I may consider having a go. Read my FORTRAN article, and see what you may be letting yourself in for ! All details are in the magazine.

Have Fun,
"Augeas"

3070. Low Price TT ram

Newsgroup: comp.sys.atari.st
Date: 1996-11-20 00:00:00 UTC
From: faehnle.2@pop.service.ohio-state.edu
Message-ID: <56ttm4$8jj@charm.magnus.acs.ohio-state.edu>
Source record: 133633

I just purchased 16 megs of TT ram for an incredibly low price!

Baber information services carries 4mb x 8chip 30pin 70ns simms (the kind
the TT uses) for $36 each! - that's about half the price of what my local
computer store offers, probably because the simms are so hard to find.

Anyway, they can be reached at: http://www.baber.com
or by telephone at: 1-800-290-0189
they are located in Irving Texas.

I just installed them and they work great. I just thought I would let other
TT users know, because I know how expensive the TT can be to upgrade.

Hi Al, on 19 Nov 96 you wrote: ...respect, brethren

a>
a> I have been trying to install HSMODA07. So far I see no speedup in data
a> transfer at all, but in my modem cpx, I still cannot select speeds
a> higher than 19200 BPS.

I don't think HSModem actually claims to speed up data transfer, although this may be a by-product of using it. It's purpose is to fix buggy serial port routines in standard TOS, much of which was so buggy it didn't allow fast serial port transfers at all. Its purpose is to allow the transfers to pass through *reliably*, first and foremost - even if this means slightly slowing transfer speeds down.

While it works most effectively with transfers that rely on hardware compression and decompression by the modems, I did find that installing it while using a 2400 baud modem on a TOS 2.06 STe ensured that I got less dropped characters and more reliable script processing with some terminals. Obviously, reliable automation of scripts is far faster than any form of manual intervention so the extra reliability results in reduced online ti

With regard to setting port speeds, it makes more sense to use the settings available in the terminal itself rather than using the modem cpx, which is limited in its capability. Disable it. I know I've never used it.

a> There is also a PRG called DRIVINSA included with HSMODA07. I cannot
a> find any info on this PRG and I have no idea what it does. Can someone
a> clue me in??

The English docs have not been updated at all, although I believe a translation is being worked on at the moment (no confirmation of release date yet). DRVINSA is only mentioned in the German docs - DRVIN.GER.

Basically, it's only necessary to be used with older terminal software -if you're using a modern terminal you can happily stick with the slightly faster standard DRVIN.PRG. If you're using something that works happily with a Falcon it's quite likely that you won't need DRVINSA at all.

n> Exactly... I was trying to install an app a few days after buying MagiC
n> which said it had to be places in MagiC's APPS folder. Nowhere in the
n> manual does it mention what the APPS folder is or where it is located...

Indeed. And it's made worse by the fact that some documentation refers to the START folder (ie C:\GEMSYS\MAGIC\START\) which was the preferred location with Magic 3 and even further confused by the use of the HOME directory (ie C:\HOME\) and yet further still confused by the fact that any of these directories can be pointed to one and the same directory, using Environment variables!

n> On another point - today I was trying to free memory for a fairly
n> memory-hungry application. I tried downing the resolution, but I

n> By the time I'd changed res 3 or 4 times I was down to around 300K.
n> This is on a 4Mb machine (well okay, with my usual installation I'm at
n> 1.2Mb after booting). Is this a bug?

Big time! In that I have a graphics card, I find myself *wanting* to change resolution quite frequently. The fact of the matter, though, is that I can't seriously do it without losing great wads of RAM at every opportunity.

It's not just resolution changing that's the problem though. If I run APPLICAT, exactly the same thing occurs (even worse tbh). Worse still is that NVDI ET4000 has a replacement for CHGRES and SHUTDOWN that supposedly allows resolution changes without a reboot, but the memory loss problem is just as bad with CHGRES and the NVDI version of SHUTDOWN refuses to allow certain programs to be closed down that were perfectly happy with MagiC's own SHUTDOWN. The result is quite the opposite of the claimed 'resolution change without a reboot'.

I guess I'm lucky in that I manage to boot with 1921Kb free (I thought that was bad enough)... B^{<

Just don't get me started on the file selector though... I know I rile people up about it, but I still say I'm yet to find one that works 100% with Magic and the MagxDesk one lacks features that were available in TOS 1.0!

Will it be fixed? Official answer - no B^{<

> appreciated.

It looks to me like the blitter modification. It changes the timing on the bus a bit so the computer won't crash when it tries to use the blitter. I am not 100% sure, because it's a long time ago I removed such a modification to replace it by a PC emulator (has the patch circuit in it's own hardware).

:
: This may be a stupid question...coming from a non programmer...but
: why couldn't one put in wait states so that audio and video wait on each
: other before running out the door? I.E. If one is faster than the
: other...slow it down...perhaps treat the data in packets where it is
: first processed/synced, and while being displayed, the next packet is
: processed, etc. One would actually see the computed results seconds after
: it is really processed.

The problem comes from loading ALL the audio data into RAM first. If the audio was played at the correct speed then the video would match because the encoded time-frame in the clip would control the video. Sadly the audio is converted from 8 to 9-bit BEFORE the video is played. Therefore if the audio didn't play at the correct speed, then video would be out (even though video is played at the correct speed)...

Remember that...

An 8-bit 44.1kHz sample with another bit added gives an effective playback rate of 49.6kHz. The closest that the falcon hardware can get to 49.6kHz is 49.2kHz. Therefore the audio playback on Falcon will be 0.8% slow. Not noticeable on a short video, but definately on a large video clip.

You will loose use of your 14M and it will be replaced with the older
4M board when the FX Card is installed. As mentioned by others, the
FX card takes 30 pin simms. It works well in some Falcons but not
in all of them. Wayne

: do you not understand? The PPC chips, the 603e and 604e slaps around the 060
: silly and just destroys it performance wise as well as cheaper to boot.

I think Petey will find that his 'native apps' are actually composed
mostly of 68k code with a handful of core routines written to use the
true PPC RISC core. This is because MacOS is mostly a 68k app. You will
still need some 68k based code to handle IO from the system/RISC core.
This is similar to how DSP stuff is written for the Falcon (DSP routs
handled by 68k based code)...

: > Further, I expect even better results once our software authours(many of

aFTP is simply a GEM-based graphical FTP client for MiNTNet. It is still a bit buggy, but I am informed that a much more stable version will be released within a week. Apart from the buggyness, it is very easy to use. You just get what appears to be another desktop window which shows that ftp site, and you just drag files back and forth to get/put/delete them. You need AES 4.0 or later to use it. (Other AES 4 compatible versions work too, of course, such as Geneva, XaAES, oAESis, N.AES etc.)

It is available at:
http://www.pvtnet.cz/www/consul/atari/atack/

3080. Re: What's Needed to play *.MOV animations?

Newsgroup: comp.sys.atari.st
Date: 1996-11-20 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <56ufdb$1e2@einstein.ebicom.net>
Source record: 133643

Okay...
I've an Alan Parsons CD ROM I'm trying to display...it's
full of MOV files...and a bunch of DIR files. I can't seem to get
any of the players to display them. Anyone had luck with the Alan Parsons
CD ROM on a Falcon 030?

Brian

3081. FS/T: Atari ST software [11/20/96]

Newsgroup: comp.sys.atari.st
Date: 1996-11-20 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <56ug15$r88@dfw-ixnews9.ix.netcom.com>
Source record: 133644

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 11/18/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 8.00 Arkanoid (Taito)
$ 8.00 Art & Film Director (Epyx) -- $4 shipping, counts as 1st item

c> inside the AUTO folder. I _think_ that ACCs or other progs that you

You can put the APPS folder anywhere you like, and call it whatever you like.
Just add the line:

#_APP C:\MAGIC\START\

with the path being anything you like. Any program then sitting in the START
folder (on my system) will then be started with MagiC ... easy! ;-)

Sorry but the BUS only runs max 20MHz, and mostimes only in the newer REVISIONS
of the Falcons. You have to install a CLOCK PATCH and some times other tricky
things. The SCSI/DMA Bus is really sensitive.

: Anyone interested can get it there.
: I haven't tried it yet, but I will tonight, and will report on it.

Got it from Alexanders page too (after Flinnys page refused to let me at it!). It doesn't seem to run much better until you get a LARGE table to format when it seems to run much sweeter! It also doesn't bog my system under MiNT nearly as much. Animated GIFs running under MiNT are much better too (shame that PPP isn't an option under MagiC yet though!! :)...

Yes, but if that is not the reason it is slow (eg getting stuff from
other side of the world) then there will be idle time on the modem. You
would actually get things done faster than doing it one after the other
by using this idle time.

MiNT-net can do this (dont think Stik can as it is designed for SingleTOS).

Newsgroups: comp.sys.atari.st

Sinclap The Idiot Boy opined:

> I am sure it does.. I doubt that Powermac users have alot of
> 68k apps in their system.. I hardly have any 68k apps in my
> system..

To which Bernd Ebert gently replied:

e > If you are no Betatester for MacOS 8 (Copeland), then your OS
e > runs in 68k-Mode and this efficently slows your machine (I
e > know what I'm talking about, I'm using different Powermacs at
e > work, but most time the Quadras with 68040 are as fast as the
e > Powermac, because for most programs there is no difference in
e > the working power of a 68040 and a PPC. All they need is fast
e > redrawing of Windows and so on, and this is done by the OS....
e > Only programs which are native need much power (like a
e > raytracer) are really faster on a PPC...)

I decided to check up on SinClap's claims Monday and see if there are, indeed, scads and scads of PPC native software, so I went to one of Toronto's oldest Apple dealers on the College St. strip (I was going there anyway, as they had some Syquest EZ135 drives at a pretty good price) and did some rooting around.

Surprisingly, there was little-to-no applications software designed to run soley in native mode, as a matter of fact much of what I did find was designed to run in 68K mode under System 7.5.5! Only a few of them claimed to run in an enhanced mode under PPC. In fact, the majority of stuff that runs in native mode that I found appears to be GAMES! To tell you the truth, folks, if I wanted a system that was killer to play games on it and made the best use of its hardware, I'd buy a Sony Playstation or a Nintendo64, not a serious business and graphics machine like the Mac PPC (which appears to have NO native graphics and business software) - $2700 CDN is too dear for a game machine!

I'm willing to be fair and check out Appland (Toronto's biggest source of Apple product) and ask them just what is available out there as far as native stuff - and I'll be sure to ask my brother the Mac guru at the computer store at York University (who, by the way, is also a Mac enthusiast, but is also a realist and not prone to throw hyperbole, plus is also a respecter of those who utilize a

different platform like Atarians or PC users). But something tells me this is another example of SinClap's Limbaughian logic....

(BTW, the Syquest is now up and running in my SCSI chain, and is so far turning out to be excellent - partitioned like a dream under HD Driver and is accessed smoothly! And all this without any hack 'n slash.....)

Well, I got it from

ftp://ftp.cnam.fr/pub/Atari/Internet/webspace.tos

Any one interested in creating such a much needed program?

We have Apex Media and Expose Digitiser but no way to created Audi Video files similar to AVI, MOV etc.

Any one to take this project?
Thanks, Raymond

The New Geneva 5 Multitasking (update) is great!

Now it feels much faster,and I can run Cubase Audio.
Geneva 5 loads and unloads programs from memory way faster.
Screen update is also faster
and it is as always , super stable.
I am sure there are many other improvements, but need some time to get to know
this fine update.

Thanks DAN Wilga.
Raymond

Please, You really need an HTML editor to get a job?

I think you should know that most of the ppl on mac or PC don't even
use HTML editor. They still do it with a text editor. Checking with
Netscape or whatever the browser.

What version of NVDI do I need or is there a program I can run in
the auto folder to give me control back. None of the cpxs etc. do
anything. The ICD booter 6.4.3 gives me the right colors when I get
to the desktop. I am guessing because it sets the screen rez for
the boot. HDDriver 60 does not.

>Manufactures give the peak Performance. You won't reach this Performance
>in reality.

It's more often interpreted as "Meaningless Indication of Processor Speed"
because, unless you're comparing two more-or-less identical processors
(e.g., a 486DX-33MHz and a 486DX/4-100Mhz), how much work is done in one
"instruction" cycle is wildly variable.

Think of two pickup trucks, say a small-bed Toyota 1/4 ton, and a long-bed
4x4 dual-rear-wheel Dodge 1 ton. You want to know how long it would take to
move 12 yards of gravel from point A to point B. Comparing the trucks by
measuring RPM at the rear axle while the truck is up on a lift is completely
pointless; it tells you absolutely nothing about how many yards of gravel
the truck can carry, nor how fast it can go while fully loaded. That's
exactly the kind of comparison that is produced using MIPS.

Leave off the "GFA" When you specify the file. I beleive that's understood
- and the compiler is a bit stupid and will add it even if it's already
there.

While reading the 11.11.96 issue of macweek, I saw a name that used to appear around this group a lot, Chris Herborth. He is quoted in the article OS cross pollination causes Be colony buzz as being concerned about the apple/be tech merger thing. Better yet, Chris is said to be a former Atari developer. It is an interesting article.

> or barely audible or what?

It is, of course, subjective. While I find it only a little annoying, my wife threatened to get an IBM if I didn't do something about it.

My solution was to put a paper clip in the vent at the bottom of the case. This stops the fan from moving and eliminates the noise. I don't know how this effects the longevity of the machine. As I understand it, the main cause of aging in solid state devices is capacitors drying out and failing while open. This delivers voltages to the delicate circuits and fries them.

Hi Gerd,

Where is your
DFB_SIZE = 580
This is necessary to make it work and
RCV_WND = 1728
number should be about 4 times the DBF_SIZE ie 5360
PROTOCOL = 0 doesnot matter as stik defaults to slip not cslip
Also the MTU should be at 1500 minum.

Regards

IMHO: WEBSPACE can't work with graphic cards like Crazy Dots II. I've
tried the demo version on a TT with a Crazy Dots II card with a
resolution of 1024x768x256. With this configuration Webspace isn't
able to shown the pictures correct. If I display a gif with Imagecopy
with the Atari VDI instead of Crazy Dots II VDI I get the same bad
resultate.

Well, one of the most useful is LIMITMEM.TTP which is used for all
those older programs which would otherwise multitask but insist on
grabbing all the memory. Run limitmem on the offending program and
specify the maximum amount of memory it can have and it will be done!

From: robbyc@robc-wfb.demon.co.uk
Message-ID: <848706546_OASIS_@robc-wfb.demon.co.uk>
Source record: 133537

Hiya all,
I'm getting a strange problem when using CAB. The status bar says 'Connecting to host' and the data light beats out a regular pulse. This carries on EVEN if I turn the power switch on the modem off. When I do this the power and the connect lights remain on until I pull out the power lead itself, even though there is a battery in the modem. This seems to happen everytime I access a second page within a session.
Any ideas would be appreciated.
My setup at the moment is
CAB 1.5, StIKTSR active , HSmodem6 active, StIK.OVL version 1.18, Pace Microlin pocket fax modem.

TIA

If you run AtarIRC as an ACC instead of an APP, you can at least go into IRC
while waiting for a page to load up, even under singleTOS. Under Geneva or
MagiC, you should be able to run any and all of the STiK apps at the same
time, paying a bit of a speed penalty every time you add another TCP/IP
client application, of course.

3126. St midi setup?

Newsgroup: comp.sys.atari.st
Date: 1996-11-21 00:00:00 UTC
From: Stephen Laisch <yakumo@xnet.com>
Message-ID: <329520F0.3735@xnet.com>
Source record: 133539

Someone recommended the Atari St w/ Monochrome monitor to me but I am unsure as to what the actual costs are and where I can buy one.

* What costs involved in putting together such a system?
* Is there midi software out that acts like a .mod player? Believe it or not, this is how I would like to sequence stuff: program notes write into sequencer like a mod tracker. At the same time, can this program handle queues? (the ability to hold several songs, or make "dj" style play lists to play one after another on que?
* does software still exist to do patching? storing/retrieveing/editing pathches for older synths like yamahas/kawais?

The type of music I would like to do is very reminicent of Erasure or Human League. I will use a Yamaha DX27 as my controlling keyboard.

many thanks...

Stephen

I don't think it has to do with GEMulator. I have had no problems
compiling my programs using GEMulator 3.x or 4.x. My program is over
16,000 lines.

Are you using just GFA or a shell type of program?

The bus speed of the phoenix is not quoted but clocking the bus at 30 Mhz (CPU/4) or 40 Mhz (CPU/3) will still give pretty startling performance with a 120 mhz 68060!! I also see no reason why this machine cannot utilise a 60 Mhz bus. With that kind of bandwidth I reckon we will have a machine to make the opposition look lame!! Remember that the top Pentium and PPC machines can only use 60 Mhz (or 75 Mhz at best) bus speeds because peripherals cannot go any quicker...

In the Auto folder??? Mine ended up as C:\GEMSYS\MAGIC\START\ - I think that
came from the Stewert documentation, though I can't remember. I guess it
doesn't really matter where it goes, but when I was first using MagiC I
wasn't _sure_. Thats why a better manual wouldn't go amiss.

>My own problem is "Install Application" crashes every time.
>2 bombs with "6800 Error 69", whatever that is (which occurs with

Ooooh, crikey! I haven't had this one yet!

I found a neat little utility on an FTP site called MAGTOROM - written by Uwe
Seimet - for MagiC users with 030 equipped machines. It uses the PMMU to
protect the MagiC code in memory from being trampled over by rogue apps. I've
not experienced as many crashes since installing it, so I guess it must help
a bit.

So it's not just me then.
Have you noticed that *SOMETIMES* killing off MagxDesk from the program
manager and restarting it can free up some memory???

>It's not just resolution changing that's the problem though. If I run
>APPLICAT, exactly the same thing occurs (even worse tbh). Worse still is

Well, I've not yet had this experience with APPLICAT. But then I haven't
touched it in a while, either.

>I guess I'm lucky in that I manage to boot with 1921Kb free (I thought that
>was bad enough)... B^{<

Hehehe :) I've only 1110 Kb free at bootup... Nowhere near enough, really.
I just wish my memory upgrade would turn up sometime soon.

>Just don't get me started on the file selector though... I know I rile people
>up about it, but I still say I'm yet to find one that works 100% with Magic
>and the MagxDesk one lacks features that were available in TOS 1.0!

Well, yes, the included one is a tad basic, I will agree. At least it deals
with long filenames. Personally I use Selectric 1.10, and haven't had any
problems with it yet. Touch wood.

>Will it be fixed? Official answer - no B^{<

The file selector or the memory problem?? An improved file selector we can
live without for the time being I guess, as there are alternatives available.
But the memory loss problem is a biggie. Sometimes I'm forced to reset to

regain the memory that has been eaten away by apps over a few hours. When you're down to 300K with no apps running, theres not an awful lot you can do.

However, Andreas must be reading this lot and possibly taking it all quite personally. So I'd just like to say that MagiC is very good, and no matter what we all say, you can tell that we appreciate it simply by the fact that we use it every day. Certainly for me when I switch my Falcon on it boots into MagiC by default. So Andreas, we are not critisising your hard work, it's just there are a few little buglets still in there that do take a layer of sheen off what is otherwise wonderful.

c> absolutely required!)

Of course...

c> it is implied that the APPS folder is to be inside the AUTO folder.

Implied - that's not what I expect from a manual. Whatever criticism ever gets directed at the likes of HiSoft, the manuals are always immaculate. Why did they insist that they produced their own manual when graeme's quite capable of writing a decent manual for System Solutions in good english?

c> I _think_ that ACCs or other progs that you want in the background, eg
c> ImageCopy, may be put there, but don't quote me: I daren't even try it
c> :)

You should try it - I run Menuinfo and ZControl from there. Again, the Magic manual 'implies' that accessories are frowned upon in that they "go against the Magic philosophy", so any that can be run as PRG or ACC can be bunged in AUTO/APPS. Other usable ones are STGuide (a pity it can't be iconised at bootup like ZControl), Freedom and, I suppose, Imagecopy (though I've never tried it tbh).

c> My own problem is "Install Application" crashes every time. 2 bombs
c> with "68000 Error 69", whatever that is (which occurs with distressing
c> frequency - as does "System destroyed").

Could this be because there's a problem with an RSC file in your C:\GEMSYS\GEMDESK\RSC\ folder? I find that many RSC files supplied with programs will cause this crash, even if I load them into Interface and resave them. I even get messages like "There is an error in the icon file" without any clue as to what it might be. Applicat is a great idea that's just gone horribly wrong ISTM. It would've been nice if someone had made the slightest attempt to fix it with Magic 5, but no hope whatsoever ISTM - it doesn't even support Magic's iconify!

It would be nice if there was some clue in the manual as to how to use it properly and what the limitations are (9 RSC files IME) - again, no hope.

I wonder how aware the authors are of the multitude of problems with Magic? I wonder what reaction there is in Germany to its many shortcomings?

Don't get me wrong - I like what magic does for my machine - I just wish it would work and I wish the big secret as to *how* to work it fully gets revealed to us poor, insignificant users who only parted with our cash for it! Everyone goes on about supporting software standards, but they seem to have forgotten to include an ounce of quality standards!

Can someone point out to me what each of the folders within C:\GEMSYS\MAGIC\ are for and how to use them? Where are they described in the manual? Why would we want to use them? What examples are given for possible application? Can someone describe each TTP file in the C:\GEMSYS\MAGIC\EXTRAS\ folder, how to use them, why to use them, when to use them, what other utilities can be placed in there?

Regards, Harry Sideras - UK Association of Atari User Groups

Only one problem with this idea Chris, the fastest 68060 available is
50MHz. You can run it slightly faster as we do in DirecT60, 30MHz bus
and 60MHz CPU.

A 66MHz CPU is planned, but again, this could not possibly run at the
speeds posted "reliably".

All the best,
Chris @ Computer Direct

Hi again ...

It seems my last posting has lead to some confusion, because I haven't said again that you have to put your own EMail-address into the first line of the mail body.

So, the easiest way to subscribe (if you have something Un*x-compatible as OS) is the following line:

```
echo myemail@anywhere.com | mailx -s "Thing: subscribe"
binder@isa.informatik.th-darmstadt.de
```

Of course, you have to type that in one single line and put your correct EMail-address behind the echo.

If you only want to ask something about Thing or want to report something that could be a bug, you don't have to subscribe. Simply send a mail to binder@isa.informatik.th-darmstadt.de and choose a subject that begins with "Thing: ". Don't forget to say that you're not a member of the list, then, because otherwise you may not receive response.

Ciao

Thomas

hsideras@mettav.demon.co.uk says...
>

[Much cut]
>Can someone describe each TTP file in the C:\GEMSYS\MAGIC\EXTRAS\
folder, how to use them, why to use them, when to use them, what other
>utilities can be placed in there?

That's been true since MagiX! v2 came out in the UK, Harry. ADDMEM was one I needed to use with JetMail which wasn't documented anywhere and it was only being in NeST which helped me round that one. LIMITMEM modified the PRG files it worked on, something I think is unacceptable under any circumstances, but it didn't even remove the extra code when you called it to remove the memory limitations. OK, I could reinstall from a backup but should I have needed to?

MagiC is a wonderful piece of coding but it will never achieve its full potential until non-German users and, especially, developers get their hands on decent documentation. How can you hope to make things compatible without decent documents when programs which run beautifully under TOS and MultiTOS lock MagiC solid? If it is not 100% TOS/MultiTOS compatible (and the authors tell us it isn't) then it's incumbent on the authors and their suppliers to give us the tools to sort things out.

3142. GIF Animation

Newsgroup: comp.sys.atari.st
Date: 1996-11-21 00:00:00 UTC
From: *csilver@kendaco.telebyte.com*
Message-ID: <571aug$hfu@news.telebyte.net>
Source record: 133602

Hello Atarians,

Well, while searching for a arpeggiator for Mario I found an excellent Web page, www.salinas.net/~asharpe, that has an animated gif of a flying dove. When I tried to view the gif within CAB(I use TURBOJIF as an external viewer) it wiped my RamDisk(MDisk) clean!!! The built in gif viewer with CAB v1.50 is fine, but TURBOJIF can't handle the new gif animation :(

Does anyone know of a good gif viewer for the Falcon that can handle the new animation gif's? I've tried a few with no results...

Snowed in Seattle,

Charles

Message-ID: <3294468D.2AA3@voicenet.com>
Source record: 133603

Hi ,

Sorry if this has been covered a million times...

I was an Atari ST user since '85 or so... Still use it exclusively
for midi <c-lab > but have moved to a pentium for all else <got tired
of looking at German>

1. Is there a driver and tools program ported to the ST for ZIP drives?

2. is there a good emulator for the PC to Atari and Atari to Pc ?

Thanks much,

harryj1@voicenet.com

Most PCs use the PCI bus, and this normally goes at either 30 or 33MHz.
VESA-local buses did go up to 50MHz, but this was a bit unreliable.

Prepare to be stunned. Running speed tests last night using GEM Bench
for an article I am writing, on my 4Mb Falcon both Geneva 5 and Magic 5,
when coupled with NVDI, came out with an average speed of 232%. I was
so amazed I checked it twice more. Looks like MagiC's speed advantage
is being eroded ;-)

Hi,

I am thinking of buying an used Falcon. Since it will be for sequencer
use I was wonder how noisy is the internal fan? Is it cleary annoying
or barely audible or what?

Also, is anybody using the KCS Omega II sequencer with falcon? I have
read somewehere that it should be compatible with the Falcon but I'd
like to hear about first hand experiences.

Greetings, Jouni Alkio, Finland

3149. HTML editor for Atari?

> HI
> I have been trying to install HSMODA07. so far i see no speedup in data
> transfer at all, but in my modem cpx, i still cannot select speeds higher than
> 19200 BPS.

Modem.cpx is a big **shit**.
You don't need to use it. You have to change your script files (Stik/NOS...),
and write the new speed in.

For NOS: Choose an old value:

110 bps (for 38400 bps)
134 bps (for 57600 bps)

For Stik, just enter:
BAUD_RATE = 38400
or 57600...

> There is also a PRG called DRIVINSA included with HSMODA07. I cannot
> find any info on this PRG and i have no idea what it does. Can someone clue me
> in??

In your Auto folder, you should have:
DRVIN.PRG very important!
then SCC.PRG (For Falcon)

> Thanks
You're welcome!

Hope this helps
Jeremy.

As on Nov 18, they have apparantly sold them all. 1 person bought most
of them..we will probably see them again at a higher price here eventually.

In article <h5D05QY.lmcclure@delphi.com>, lmcclure@delphi.com says...
>
In the December 1996 issue of "Electronics Now", All Electronics Corp. has
Atari Jaguar controller/keypads for sale for $2.50 each, or 10 for $20.
Shipping and handling is $5.00 per order for the continental U.S, so unless
you are ordering 10, you might want to check out what else they have
available. They have a web page at http://www.allcorp.com/. They take all
major credit cards.
-
At this price, if you have an STe or Falcon, it might be worth it to
>pick up a controller or too, just to expirement with. If you have a Jag
>or an STe game that actually supports these, so much the better.

Sounds like you need to set the "Compatible VDI"-option, and not
"Direct VDI". I don't know if these options have any effect in the
demo, but you could try.

I've used for a couple of days now, and while it indeed is faster when formatting pages, for some reason it doesn't use the images in the ram-cache! It reloads & converts the images even if they're in the cache (Or should be there, like when I'm constantly reloading a local page when editing it.).

You have to define what you mean by that.

>>DSP 56001 (32 MHz) -> 27 MIPS
>>MC 68000 (8/16 MHz) -> 0.8/1.6 MIPS <- This could be wrong
>>MC 68030 (16 MHz) -> 3.84 MIPS
>>MC 68060 (60 MHz) -> 110 MIPS
>>
>>As far as I know, a Pentium133 is 85-90 MIPS.

Using MIPS the way people are doing in this thread makes it even worse
than 'Meaningless Indicator of Processor Speed' suggests.

For some processors you're giving the maximum possible instruction throughput
and for some you're using what I can only guess is Dhrystone VAX MIPS, which
is the usual definition.

If you take the same numbers for the Pentium133 that you use for the '060
you'd get something well over 250 MIPS, since that processor is also
capable of running two or more instructions per cycle.
The 85-90 figure is very likely VAX MIPS, but even then it seems low.

Take a look at
http://performance.netlib.org/performance/html/dhrystone.data.col0.html
for what's usually meant by MIPS.

The best m68k results I could find there were a 25 MHz '030 at 5.0 MIPS and
a 28 MHz '040 at 21.6 MIPS. No '060s, unfortunately.
There was also a Pentium90 at 124.4...

I'm not saying that Dhrystone is a good benchmark in any way. It just
happens to be what's normally used for MIPS ratings.
That said, there are some other benchmarks that mark their results as
MIPS as well...

>There is no such beast as a 68060 60MHz. 50MHz and 66MHz only. The 50
>MHz is rated at 100 MIPS and 47 MFLOPS. One could also rate it at 150 MIPS
>if they included the math functions. The 060 is capable of 3 instructions
>per cycle and one of these instructions can be a math instruction due

You don't even have to do that to get three instructions per cycle. A branch can also be executed in parallel. The numbers you get this way are still completely useless, though.

>We run the 060 at 60MHz in our DirecT60. This gives us a rating of 120 MIPS.
>The 060 66MHz would of course have a rating of 132 MIPS.
=========
Which by itself, of course, says it all about your way of counting...

Guy, what are you doing in this thread? The article you are replying
to is in the "Multitasking internet?" thread... not in "multitasking" :-)
There is another Oasis problem I think...

Oasis 1.3x shows threads by subject, but not whole subject, only the
xx first characters (and case insensitive). So it can show 2 (or more)
threads with close titles as one thread. And when you reply to an article
the new subject is [Re:] + title of the thread, not [Re:] + real subject
of this one article...

Bye! Bruno.

>
>For NOS: Choose an old value:
>
> 110 bps (for 38400 bps)
> 134 bps (for 57600 bps)

No, NOS can't set speeds below 300 bps IIRC, it prints an error
message like "unknown asy speed" but works correctly with the previously
set speed. So you must set such speeds (110, 134 or 150) before, with the
modem.cpx or anything else.

Same thing with MintNet and PPPD 2.2.0, it can't set speeds below 300
or over 38400. Over 38400 it prints an error message, but below 300 not,
it just do nothing. It also works correctly with any previously set speed.

You can verify the actual asy speed with a modem command, on mine it's
"/" so I have my init string like this: "AT/Z". Each time I connect, it
prints the dte speed and resets.

Bye! Bruno.

: After finish of some old apps i lost ram..

No!
There is no RAM lost at all. The memory is just fragmented.
Try MEMEXAMN, and you will see.
No program ever loses RAM if it is not a TSR program. People just think
it because they do not know the amount of free RAM but only the size of
the largest free block.

: So it's not just me then.
: Have you noticed that *SOMETIMES* killing off MagxDesk from the program
: manager and restarting it can free up some memory???

No!
It does not free memory, it just does some de-fragmentation.

: Well, yes, the included one is a tad basic, I will agree. At least it deals
: with long filenames. Personally I use Selectric 1.10, and haven't had any
: problems with it yet. Touch wood.

What wood?
WOOD.PRG ???

I think selectric is not bad. But it does not work with long file names
and this is absolutely essential both for MagiC and MagicMac.
And do not forget: As far as you have enough memory for Selectric, your
memory situation can't be so bad.

Of course I like to write a complete, long manual. I not only like it,
I did it. But then came the distributors: Too long, too expensive, too
complex, too complicated, nobody will be interested and so on...
This made me very frustrated and I gave it up for all time ever to write
a good manual again. The best manual for MagiC came from Bela and was
for MagiC 1.0, 1.1 and 2.0. All following versions had worse manuals.

Yes indeed, MagiC 5.03 has been released (I'm using it right now). As for the changes, there are more processes allowed, you can now use 64 character filenames, threads are now in use (I found that one out while playing a music CD in my CD-ROM!) as can be seen in file operations with MagXDesk. I can't recall if there are other features off hand, but I don't think so. Anyway, it is quite nice...

>four. All I want to know is how much memory I've got left on the blasted
>thing. It only happens on that one partition. Any reasons?

Most likely one is a corrupt directory link. Open the partition window
and manually click on every single subdirectory in turn until you find
one that misbehaves (crashes or shows complete garbage). If nothing
goes wrong ignore the following completely ...

Once you've found the offending folder you have two choices. You can
fix it with a disk sector editor or restore the partition from a
backup. If you have no backup then you should be able to copy all the
other folders to another partition ok. All the data in the buggy
one(s) are as good as lost. Now zero the partition and copy the
uncorrupted stuff back.

A point to note: If you have TOS 1.2 or less this fault will almost
certainly have been caused by the "40 folder" bug. Increase the folder
memory with your hard disk software or FOLDRxxx.PRG because it _will_
happen again.

>I recall that there was a mouse driver for that.

Not even close to the same thing. PC-Ditto uses the Atari mouse port hardware. There /is/ no Atari mouse port hardware on a 386 motherboard - or any other PC (with the possible exception of a GEMulator; I don't think it has a mouse port on the card, but I could be wrong).

Bottom line: You can't use an Atari ST mouse on a PC without extensive rewiring. Unless your time is worth a lot less than $10, it's just not worth the effort.

3186. Atari Developer Pack?

Newsgroup: comp.sys.atari.st
Date: 1996-11-22 00:00:00 UTC
From: Kent Johansson <kentj@medea.se>
Message-ID: <01bbd85b$75480ba0$0c69f482@NTSERV1.MEDEA1>
Source record: 133488

Howdy everyone!

I have a few questions, regarding products Atari once sold and supported, I wonder what have happened to these now that Atari Corporation is "obsolete"

- The Atari developer Pac, Public Domain? Not! But what is the status of it?
- TOS, old tos versions, 1.02,1.62,1.41, 2.06 has Atari any intrest in these anymore, and how do I do to get hold of a ROM set?
- Chips, suppose my DMA breaks down, or my MMU dies, are there any good sources for spare chips?

A intresting note, the YM2149 soundchips is some 17 years old! I found some documents dated from 1979 about how to connect it to a 8080 cpu.. <G>

/ Kent Johansson
/- my other computer is an Atari...

3187. Survey: cancelling cross-posts

Newsgroup: comp.sys.atari.st
Date: 1996-11-22 00:00:00 UTC
From: atari@teleport.com.REMOVE.THIS.TO.REPLY
Message-ID: <574s00$oha@ornews.intel.com>
Source record: 133489

Before I continue my quiet campaign against spam, I think I ought to ask how everyone else here (who owns an Atari - don't even bother to answer, sinclap, your opinion is of no value) feels about it.

Is there any strong objection to my canceling articles that are cross-posted from inappropriate groups? Unless there is a loud outcry from most of the readers here, I'm going to continue doing it. I /don't/ cancel articles based on content, but on cross-post status (and in the case of multi-posts, like the recent flood of "are you ready for love" ads, based on the Breidbart Index for spam).

Keep in mind that, even if I cancel them, many articles will be visible for a day or more before they vanish; on some servers which do not accept third-party cancels, they'll remain visible until normal aging removes them.

So, what's the concensus?

There's a program called HPPING., which is supposedly just that; a quickie
HTML writer. I got itas part of WWW140 package, but some of the other
parts of the pack didn't un-arc, so I couldn't try it out.

Sounds good. Pity it's not really possible to cancel cross-postings from
.advocacy that do not belong in here. Not that I have any one person in mind
:-)

Geneva does not come with any desktop, however it has:

o A built-in file selector which has basic copy/move/launch options.
o A shareware program launcher called GenevaRun.

Of course, you can use any of the popular replacement desktops like
NoDesk, Thing, etc.

For a demo version of Geneva, see www.pair.com/~gribnif/ .

Sure, it's called Everest. It edits HTML just as well as any other files,
and it's got a lovely GUI.

I'm not sure that's exactly what you mean though... :)

Seriously, learn how to write HTML and do it in a text editor. It is the
best way, and will result in much better pages than any dedicated HTML
editor. The best way to learn is to look at other people's pages, but you
do have to be careful not to pick up bad habits that way, a validator tool
is always useful.

Duuuh! Gee, how obvious! :^) (I just ran into that a couple days ago,
so it's still fresh in my mind, but I had forgotten it at the time I posted
the previous message.) I thought I had tried that already, but HD-Driver
gets in first. Or maybe I confused holding down Alt with Ctrl. ??? Anyway,
I'll give that a try - I'd always thought I had to use Backwards to load
DM (and I have done so successfully - altho maybe before I got my hard
drive and HD-Driver?).

>>Sorta on a new topic, I'm disappointed that Lure of the Temptress doesn't

There is a software called: HPPING. You casn create very easy a
Web-Page with links. If you want more (Pictures, midifiles etc) then
you must load this page in an ASCI-Editor (f.e. 7up) and edit the page
there. It is really easy.

You can load and show your Page with CAB(ATARI) or Netscape(PC).

Whoa up there! Heartland happily resides on my H drive in it's own folder!
I run it with ICD 6.5.5 booter and TOS 2.06 at 16Mhz on my STe 4Meg!

>any drive and any folder :) For those, I still have to rely on Install

That modification solves a timing problem with the expansionport within
the Mega. If you do not intend to use it, it can be removed, although you
might want to restore the cut lines on the motherboard... :)

The mega works fine without it, even though some of ataris expansioncard
(FPU-card, graphicscard) will probably not like it.

I've heard many explanations as to why the patch is there, one person I
know, claims that atari was to lazy to fix the problem on their
expansioncards, and instead made the modification on the motherboard.

Hello,

I have a real collectors piece here. A new Atari PC4 IBM PC for sale.
PC comes with all original books, disks, and box.

Atari PC4 PC
Serial Number : 124 <-Yes #124 not too many around
286-16 CPU
Two video ports (analog and digital) for MDA, CGA, EGA, and VGA graphics
1 Meg of RAM expandable to 8 Meg
32 Meg hard drive
1.2 Meg 5 1/4" floppy
Has Atari labeled MS-DOS and Windows
Atari Keyboard
Can use Atari ST 3 1/2" external floppy drives.

Unit is new and in great condition and works fine. Asking $250 or best offer.

E-mail me or call 216-729-0761 evenings 6:00 - 10:00 PM EST

One of the punishments comming with large harddisks is the operating system running out of space in the GEMDOS-Pool. This can be fixed with folder100.

An other possibility is crosslinked files and/or lost clusters making the lifo of the OS hard. Thes problems can be traced and solved by chkdisk3 (first move important data to another partition because fiddeling with the FAT can cause a lot of data loss, chkdisk3 one of the best utilities for doing work like this, although it doesn't come close to the good old Norton Utilities on DOS).

A third problem I heard about is TOS having trouble with the clusters 32767 and 32768, I never experinced trouble on this point though. (I am using KAOS TOS, KAOS addmem an ICD harddisk driver (6.51) with an ICD advantage hostadapter and about 1.2 GB of harddisk space).

Are you referring to an A/V control station, or are you wanting full scale capture/playback & manipulation from within the Falcon?

You could always SMPTE-slave Cubase Audio Falcon to an external VTR editor for very workable A/V sequencing... I imagine your wanting something a little more hi-tech though. Kinda like Adobe Premiere on a decent mac (hint: might be worth a gander if you're serious about A/V.)

Now, if you were just asking about creating super lo-rez movies for fun and spreading over the internet... then void my earlier statements. It could be done. But I think it would resemble something closer to animation than a smooth movie; and unfortunately I'm not the man for the project. :-)

Source record: 133546
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st,comp.emulators.misc

Hi,

I am really desperatly searching an emulator for PCs which emulates
my 1040STFM with TOS 1.4 (I thin) or 1.2.

Up to now I tried several:

MagicPC (full version) : problems with fileselectboxes (*)
MagicPC (demo) : No use, due to disc only file access
Gemulator96 (demo, with MagicPC Magic_OS 1.0 96/6/26):
same problems as MagicPC full version
STonX : Is known not to run GfA3.x
Tos2Win : Did not run (Page fault under W95)
ST??? (som efrench emulator, from the comp.emulators.fawq):
The address was inactive (No files there , no
mail reply but a timeout sending mail!)

(*) the problems seems to depend on MagiC. As long as I use Magixdesk
I can access all data from the desktop. But when I switch to GfA Basic
and try to load a file, th eselectboxes stay empty. Nevertheless I may
load a program when I type th ename blindly. But then GfA behaves bad
when trying to load a file. (sometimes it works, but mostly it
doesent). Using Gemini1.999(!) as a replacement makes it even worse,
as gemini is not able to open any drives ("Error: fgetinfo failed").
Using the supllied shell tells me: "Not enough memory to open
"<unreadable sign> but this cannot be th ecase (16M, 1,2G HD)

So please, has anyone an idea how to continue??

Please suggest help to
Ronald

ps1: I use W95 and Linux, so both platform solutions will be welcome.

> I'm having trouble running unprotected floppy games from my ST HD using ICD
> Drivers, I have tons of games and I hate
> using the DAMN unreliable 720k floppy's ..... Any suggestions?

I also have a hard drive using the ICD driver and there are two types of games I can only run from my floppy.

One is copy-protected games, but they run from the AUTO program instead the boot sector. For these games, I run AutoX which runs all the AUTO programs from the A drive. With SuperBoot as my setup program, I can run AutoX for games like Impossible Mission without turning off my hard drive. But I have to turn off my computer and back on with the switch, or AutoX will keep running and not SuperBoot.

The other type are the games that will *only* run on the A: floppy drive. A good example is Heartland, though I think STOS programs can run from any drive and any folder :) For those, I still have to rely on Install Application as autorunning. You can do this from TOS 1.4 and up.

What I recommend is using a boot manager program such as SuperBoot which I strongly recommend. Then in one of the slots, use AutoX(renamed AUTOA.PRG) and using STARTGEM.PRG as the GEM application to have SuperBoot run with a desktop.inf file for your game enviroment.

If you can't find any of these programs, I'll send them to you. This is how I can run those floppy games with a HD system, but your'e still stuck to using a slow cranky disk drive :P

> >done.
>
> Thats one hell of an expensive web page maker, a bit dramatic?

Crap, you can easly pick up a book on making HTML files(which are easy to understand now), and just type it in a regular text editor. Plus a good conversion program like ImageCopy or GemView will turn your picture files into proper GIF's. And you can use CAB as an off-line viewer to see how it comes out. It's not really that hard to make a web page, I may not have my own site yet but I just made some real dandy bookmark pages :)

Besides, HTML editors on the PC cost around $900 and $500 used. That's way too much for what a text editor can do on a basic level. But if you *already* have access to a PC, then Netscape Gold has a built-in editor.

I'm sure someone will end up making a HTML editor for the ST soon, but go for something that's as less money as you can.

c> as does "System destroyed").

Firstly backup your GEMSYS\GEMDESK folder, then you should start with moving all your .RSC files out of Applicats sight, then try again, if that fails move all applicats data files such as applicat.inf and applicat.dat. One of them is likely to be corrupted. Although ive a feeling that you may have a duff .RSC file, so start there.

I'm looking for a desk accessory that acts like a MIDI panic button,
sending note offs for all notes on all channels and then the MIDI all
notes off message.

Thanks and have fun! - Bob

Hi Bill,
System solutions in the UK was developing such a program and developed
it to a working beta version. Full GM spec too. But for some reason
known only to themselves, development was stopped :-(
Regards
Dave B

Seems like you need a clue between an OS and native apps. Apple would not have
released the Powermacs if there was no sustainable speed over the 68k Macs.
Parts of the OS are native. The apps I run are native and completely destroys
the fast Quadras. Seems like your firm did not upgrade to native apps and or
installed the 68k ones by mistake. Many of the popular apps contain both 68k
and native ones..You need to refresh knowlege of the Mac OS and native apps
before you comment again.

In the early days of the PowerMacs, firms charged a few dollars to upgrade to
the native version. I'd like to know where you got this 5-6 gran business?

O.k. Where does one get ST2DOS?

Here's my real question: I have some Atari-formatted diskes which have
Dr. T's sequencer files on them. I think some of the files may have been
accidentally deleted and want to try to recover them.

* How should I proceed?

* Is there an "unerase" command that works on the Atari ST?

* Are there disk utilities for the ST (or maybe even the IBM PC)
which will allow me to thoroughly analyze the ST disks?

* Can I make copies of the disk images and work on the images?

* Supposing I could do sector by sector recovery of the disks, does
anyone know the format of Dr T's MIDI sequencer files from the
late '80's?

Thanks in advance for any help you can offer me. As you can see I
am rather unfamiliar with the Atari ST (but am desparate to recover some
data for it!).

BTW, the disks in question were formatted on a ST, not a PC (somehow
I think that matters ??).

For sale:

Only a year old and complete with original packing, manuals, drivers plus
bonus software including magic, nvdi, ease and kobold.

Matrix TC1208e VME graphics card, 2MB VRAM, TMS graphics controller with
hardware
zoom and pan, 135MHz dot clock, resolutions upto 1600 by 1200 in 256
colours, 1152 by 864
in 65536 colours, 832 by 624 in 24 or 32-bit truecolour. Rock steady and
programmable
refresh rates, displays all fully programmable. Complete with NVDI4
drivers and resolution
switching on the fly with MagiC4 (also included).

Cost over UKP 1000! Only suitable for the TT and fits smartly inside.
Will sell for only UKP550.

Interested? Then email Dr Simon Williams on :

spesgw@cf.ac.uk (daytime) or
106247.343@compuserve.com (evenings and weekends)

Message-ID: <01bbd5ff$68306740$3498aec7@qp6-200-sm-2>
Source record: 133564

I can sell individually, except for computer and monitor.
I figure I'll have better luck selling them as a unit. The other components
are not exclusive to Atari, so they're easier to sell individually.
Here's the breakdown:

I'm asking $175. for Atari 1040 STe 4 Megs RAM + SM 124 Mono Monitor
+(SC 1224 Color Monitor. Needs repair. I'll throw that in for free.) And
Mouse

$50. for Practical Peripherals PM144MT II 14,400
Fax Modem

$100. for 100 Meg SCSI Ext. Hard Drive with ICD Link
II Host Adaptor

$100 for Epson Stylus 300 Monochrome Ink jet printer

I"ll give the software to the buyer of the 1040 STe.

Buyer pays shipping.

It is supposed to make the blitter work properly. It just synchronizes
some blitter related signal to the CPU clock.

Has anyone started a list of the top ten reasons for CAB bombing??? I have used CAB on my own system (Mega STe, 4 Meg RAM, TOS 2.06, ICD 6.5.5 Pro hard disk driver, monochrome) and only had occasional problems. Other members of our user group have just started using it and have had problems with it bombing. This includes different systems (Falcon, 1040 STe) and different TOS's.

Also, which versions of the CAB.OVL and CAB_JPEG.OVL should be used? How many bytes are they?

I recall seeing a message saying that the default parameters for STIK_CFG should be changed. What should they be???

Will the stalled JPEG bug EVER be squashed????

I tried to get it to run from D drive with the Heartland folder in the
root, but it couldn't be done. For some reason, all the STOSSER games I
get act funny like this and I got them from Tony since my web access at
the time was pittiful.

That's the thing the disappoints me, when PPC first came out...it was to be a multi-OS platform that runs Intel and Mac based programs on the Power PC which is quite fast.

To this *day*, all I still see are PowerMacs that are nothing more than speedy Macs to run Mac programs. To run DOS and Windoze applications, you need a 486 card. Go ahead and say "What the..." to yourself.

IBM is concentrating on Aptivas(which runs Windows 95 on the Intel), some guy at Apple "assures" me that a PPC notebook will run DOS/Windows programs in some way, and Pete...dear sweet Petey...insists that I go out and buy a PPC workstation that runs Windoze NT.

I neither have the time to wait for promised vaporware or afford a nerd's wet dream.

I say, drop the bull and put out a real proper PPC platform now! And I'm hoping you Atari users will look forward to this as there may be a way to run ST programs on it. :)

Putting the "bull" in Billionare Bill...

Atari ST stuff for sale:

SC1224 monitor (color), $40
MonitorMaster, $10
External 800k floppy (SF314), $10
Supra 2400/9600 Fax modem, $15
Supra 2400 modem, $10
Joysticks, 2 for $5
25-pin parallel cable, $5
9-pin serial cable, $5
Monitor swivel stand, $5
International TOS Software Catalogue (1992), $5
Star NX-1001 printer, $50

ST Software:
1. $20 each: Geneva, NeoDesk 4
2. $15 each: CardFile 4, Diamond Back 3, WordPerfect, Diamond Edge
3. $10 each: FontFarm, QuickForms, Ultimate Virus Killer 5.7, Warp9, FirstGraph, DataDiet 2, XBoot, Spelling Sentry, GramSlam, ChessMaster2, Squish
4. $5 each: VIP Pro, G+Plus, ImageCat, MVG, BaseTwo, Lookit/Popit, WordWriterST, Codehead Utilities, MacSee, CodeKeys, EdHak 2.3, Your ST Comes Alive (book & disk on making robots), Personal Pascal, DBasic, Forth M/T, H&D Base, Micro C Shell, Diamond Back II, Degas Elite
5. Games, 2 for $5: Typing Tutur/Word Invaders, Faherenheit 451, Beyond Zork, Nine Princes in Amber, Perry Mason, Mean 18, Trinity, Sorcerer, Suspended, Death Sword, A Mind Forever Voyaging,
6. 3 for $5: Turbo ST, TurboST, Flash 1.6, Home Accountant, HotWire, QuickST 3.0, Time Link (time management), TOS Extenstion Card Utilities, Pro Sprite Designer, Renegade, Sound Lab, Super Directory, InterLinkST, Quantum Paint, Degas,
7. magazines and disks, STart 1986- 1990, ST Log #27 - 35, $2 each
8. ST Informer, 1992 - 95, $5 for the set
9. PD disks from ST Informer, ComputeST, BRE, ST Format, Atari Interface, AccuSoft, Atari Federation and more, $15 for 50, $25 for 100

For Macintosh (use with Spectre):
Write Now 4.0, $15
HyperCard 2.0, $5

Offers on combined deals welcome. Buyer pays shipping.

Mille Babic wrote:

> I can't get the grips on all the sweet definitions on
> alternative RAM for Atari and Compatibles.
> Can someone explain what is, how fast, pins and limitations for:

> ST-RAM

This refers to RAM that's compatilble with the original ST RAM. All ST compatible hardware can access ST RAM. This hardware is:
* The video chip
* The DMA soundchip (STE, TT, Falcon)
* ACSI DMA (ST harddisks, diskdrive)

Al other RAM is called alternate RAM. From the programers point there is only ST and Alternate RAM. In the program header there is a bit than can be set to indicate the program can be executed in Alternate RAM and may allocate memory from Alternate RAM. With the Mxalloc() call you can control which type of RAM should be allocated.

> Alternative RAM
> Extended RAM

I think these two mean Alternate RAM.

> TT-RAM

This refers to a special kind of Alternate RAM. It's one of the types of RAM that can be installed in a TT (an other type of alternate RAM that can be installed in a TT is RAM on a VME card and that's not realy fast accesible RAM). This TT RAM can be accessed by the processor faster than the normal ST RAM in the TT.

> FastRAM

TT RAM is also called fast RAM, but other types of Alternate RAM that can be accesed by the processor faster than the normal RAM might be called fast RAM (ie some RAM extension cards on the Falcon).

Alternate RAM can be realised in many different ways, so you can't speak of pinnings and limitations of these RAM types.

> PS/2 RAM

This refers to a special kind RAM module. These modules are 72 pins simms and have a 32 bit bus (the simms in an STE are 30 pins and have an 8 bit bus.

As far as I am aware there are no HTML editors available for the Atari
range. However HTML language is dead easy to understand and you'll
learn alot more and be able to achieve alot more by buying a book on HTLM
language (choose from the 3000 at your local bookstore) and getting a
good text editor.
Incedently, Edith Pro (a text edt.) apparently has built in macros for
HTML called 'Kurzels'.
Good luck and may you produce many excellent WWW pages!

>
>1. Is there a driver and tools program ported to the ST for ZIP drives?
Yep. Hisoft in the UK produce a CPX for controlling it and the latest
versions of HD Driver also support Zips and other removable media.

>2. is there a good emulator for the PC to Atari and Atari to Pc ?
For atari emulation on a PC, there's gemulator and MagicPC 5. On the
atari, things are good. The 'latest' emulator available is for Falcon
machines only and is a 286 16mhz board.

I am new to Atari (bought a used system) and new to the group (have mercy). The system: 1040ST (4MB RAM)/Megafile 30 Hard-Drive/SM 125 monitor. I am mostly running the CUBASE midi sequencer.

Currently, the system will not boot up properly with the Megafile Hard-Drive connected-bombs away and automatically re-boots ie. viscious cycle. However, as soon as I disconnect the HD, the system works OK albeit in tortoise mode.

I will be eternally grateful for any suggestions/recommendations on how to properly marry this system for a successful working relationship.

Thanks, jeffrey {;-(

Message-ID: <576doq$9na@nadine.teleport.com>
Source record: 133386
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

I have an Atari Stacey I'm selling for Parts, to be sold for parts. Not to be repaired. If you wan't to try to buy it to try to repair it? I'd advise against it. It is one of the first ones off the Assembly Line, without batteries. It's Switching Power Supply has been tested & works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold. Unless, of course, It's sold with the Stacey. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.
--

From: dzander@solaria.sol.net
Message-ID: <578gmu$nmo@solaria.sol.net>
Source record: 133388

Hello everyone,

I want to know if anyone else has been having problems. About two
months ago (September) a particular person was advertising Atari software
and hardware for sale. I got in touch with this person and we made a deal.
I sent a check to his address on Sept 24th and he claims he never got it.
This person also claims he sent to me the Atari materials in question.
Now its been 2 months and I have neither my check back nor the hardware
he claimed to have sent to me. I'm not sure if he cashed the check yet,
but I feel I've been ripped-off. If anyone else has been having problems
with someone selling Atari hardware/software around mid September please
let me know; I would like to know if there is a pattern developing here and
whether or not I have to disclose this person's name. Respond via email.
Thanks.

3262. Where is the source of vertical synchro in a Falcon?

Newsgroup: comp.sys.atari.st
Date: 1996-11-23 00:00:00 UTC
From: tomo@fly.cc.fer.hr
Message-ID: <5771e9$83t@bagan.srce.hr>
Source record: 133392

Friends!

I have a nasty problem with my Falcon for over a month now.
The closest service is 1300 km and 3 states away. The budget is thin. The need is big. The sorrow growing.

I mailed tons of people already, and posted that here also. Many of you contributed - thanks again. But so far, noone really answered the key question: Where is the source of vertical synchro pulse in F030?

The non-existance of vertical sync in my Falcon really causes another trouble: as it also serves as a readout pulse (telling to the system when it is time to read the screen memory and send the data to the picture D/A), the COMPUTER DOESN'T BOOT until it gets FIRST readout pulse. I discovered that I can produce a fake R.P. by touching the R50 - a 33 Ohm resistor which derives R.P. from vertical synchro. R50 is at the back of the motherboard.

After succesful booting, the computer executes the contents of an "AUTO" folder - if any - and refreshes the screen memory correctly. If I keep a finger (ungrounded) at R50 for a while, I can see the picture - but as there is no sync between readout and vertical pulse (and let's not forget the horizontal also) - it flies upwards-down like hell.

I believe that there is a device inside F030 which divides a HF from an oscillator by two factors, both contained in NVRAM registers, thus producing two synchronous signals - horizontal and vertical synchro.

Which device is it? Which signal does it use? What are other users of vertical sync in F030?

Please, tell me all you know. Reply to my personal e_mail and followup here if you want. You simply can't say too much on the subject.

tomo@fly.cc.fer.hr

Once again very thankful

Tomo

Who wanted what he could not

P.S. Resetting NVRAM, cleaning the mem-card contacts and stuff like that simply didn't help. The scope shows - there is no sync and that is the trouble.

I have been using MagiC 5 for a while and it works fine, Make sure you are not using any of the old system patches MagiC has fixed those.

MagiC 5 is faster Calamus SL really files. All the programs seem to work better. Magic 5 is fully threaded except for the printing and display which needs NVDI5.

There are some rouge CPXs which will cause problems with MagiC also remove these. Get the Latest version of Zcontrol and the latest version of WINCOLOURS.

>in French. I have not been able to get it to work since it usually
>locks up my DirecT60 when I try to do anything like load in a html
>file. Has anyone else d/l this program and tried it out?

Yep. The demo's crap!! :(Not worth the disk space or the phone bill in
downloading it I'm afraid!

One can only hope that the real $60 product is going to be a damn site
better!

Some people seem to think it's the business (in this newsgroup) but I've
tried it on my Falcon (TOS4.04 and Magic5) and it's shite!

I appreciate that it's just a demo (but please......)

STiK to CAB if the demo's anything to go by (pun intended :))

And yes this posting is meant be a bit controversial (I'm sick of people
'claiming' that the demo works) when it damn well doesn't.

I had great hopes for Webspace (from all the blurb on OXO's site) and thought
it sounded too good to be true (if the demo's anything to go by then it is)

And yes I speak/read French so that ain't the problem!

3272. Low-level harddisk formatter needed (CBHD problems)

Newsgroup: comp.sys.atari.st
Date: 1996-11-23 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32966a7a532e30@sn.no>
Source record: 133433

As some of you might recall I wrote a few weeks ago about problems that
I had with my harddisk when trying to change my driver from ICD to CBHD
(due to incompatibility with MiNT which I wanted to try out).

My drive kept crashing all the time although everything seemed fine when
checking the sectors etc. But I couldn't re-format it properly.
So I had an idea that I wanted to try out: visiting my brother who has an
Apple Macintosh- I connected my drive to his machine and formatted it.
From the manual that came with the formatter I found out that it did a
low-level format actually (the manual referred to "high-level" formatting
as "initializing").

Anyway, connecting my harddisk back to my STe I managed to reformat it and
start from scratch without any problems at all!!!
I didn't want to try to install any new driver until I was absolutely sure
I did it right, but yesterday I just got too tired of having to boot from a
floppy (and not get access to any AUTO-programs), so I started up the
CBHDCONF.APP program and went to the "installieren".

Well (sigh).... the problems have started all over again!
That is, I got 4 bombs every time I tried to boot from the harddisk and
nothing helped. I was able to reformat it with ICD's software, but I'm not
sure if I can trust the drive before all it's data is completely wiped out,
so- does anyone know of a low-level harddisk formatter program?

(my brother lives pretty far away from where I live, so it's a little
problematic trying to reformat it with the Mac again).

Hi,

as I am trying desperatly to run an emulator together with GfA3.07 I need a TOS image 1.4 or 2.0.

I DO have an image 1.02(!) but it doesn't work with gemulator and probably won't work with all the other emulators.

MagiC 4.00 absolutly doesn't comply with GfA3.07. Somehow the file handling is broken, so I cannot access files properly via fileselectbox or direct input (even though it READS the files, it fails to list them or to detect the EOF properly :(((((

So please, is there any TOS image around? It would not be copyright violation as I DO own an ST.

PLease help
Ronald

ps: I would need an ftp access to it . I am not used to BBSs systems. I can offer a ftp space here, where YOU could download it too as well.

>Atari MEGA ST2 for sale in Austin, Texas - As is/where is.

Damn, this is still a popular machine.

I've received over twenty offers to date. The current high bid is $120. I promised in my original post to keep the bidding open until the end of the month, so you've still got time.

Even if you aren't willing to go as high as $120, you should still make an offer. If the high bid falls through for any reason, I'll take the next high bid. The current No. 2 bid is $100.

E-mail any offers to nkennedy@geocities.com

:
: >with a 120 mhz 68060!! I also see no reason why this machine cannot
:
: Only one problem with this idea Chris, the fastest 68060 available is
: 50MHz. You can run it slightly faster as we do in DirecT60, 30MHz bus
: and 60MHz CPU.
:
: A 66MHz CPU is planned, but again, this could not possibly run at the
: speeds posted "reliably".

Eh? I thought that CompDirect were already selling a 66Mhz DirecT60! Why
would Centek in France advertise their Phoenix060 as having a 120Mhz
68060 if such a chip was an impossibility!?!

If the post about the Centek machine is just a hoax then it is an
extremely poor one IMHO!!

Can anyone confirm/deny the specs for the Centek machine. These are they...

60Mhz 68060
33Mhz bus
66Mhz DSP56302 with slot for second DSP
Fast serial/parallel chip (IOP 683xx)
SCSI2 fast/wide (20Mb/sec)
Vocal Synthesis chip on motherboard
3 PCI slots
PCI video (Matrox Mystique 1280*1024*16.7M colours)
or (Matrox Millenium 1600*1200*16.7M colours)
etc...

All the OCR's that I have seen will also let you load in an image file. Usually an IMG. I personally use a Golden Image hand scanner and the Tray with Scanlite and Coalesce to stick the 2 halves together into a full page img and feed that to the OCR. Works fine! Check out Toad!

Who?...NO ONE decides who goes on irc, everyone is able to join
channel #atari whenever they like, its a free thing?

>I know I am! Join me and others at "#aatari"

why do we need 2 atari channels?

>Go there! Only thrusted ppl (not onlt folks that's been on for 2 weeks and
>are "cool") will get ops!

and why would anyone want ops?, isn't that what your complaining
about on THE atari channel?
most irc clients (including the ATARI irc that arrives with StiK etc)
allow you to be on more than one channel at once, so having 2 atari
channels defeats the object of trying to exclude other people,

I really am at a loss as to why you would want another channel?

Cheers.............!ynoT

From: Wojciech Hartman <harti@waw.pdi.net>
Message-ID: <576mr8$ksb@info.nask.pl>
Source record: 133448

About two months ago I have downloaded a demo of a beautyful sample editing program Sound Studio by 0X0 Concept for Falcon. It has ALL the -- functions I would require from such a software and is very straightforeward for use. Demo version is fully functionable except monitoring.

I wanted to order a full version, then. I tried to send faxes and call all the numbers announced in the documentation (one in France and one in the Switzerland). They are all blocked, I've tried day and night. I sent some letters to both of the addresses - no answer.

Does anybody know what happened to the programers (0X0 Concept)? I would like to pay for a copy of the Sound Studio (Studio Son in a french version), regardless of their further support!

Wojciech Hartman.

Hello!

I have STIK 1.12, CAB.ovl 1.18 and CAB 1.5.
This combination worked very well.

I read in the doc of the new CAB 1.5 that now in this version you can
use the new CAB 1.20h.
I tried it and make many different experiences and
sometimes 1.20h worked, but only online.

Not offline, even though Alexander wrote in
the doc, that this bug doesn't exist any more in the CAB 1.5-version.

Does anybody know what's wrong? Could it be that 1.20h doesn't work
with TOS 1.04?

and spam spam beans and spam...it hasn't got as much spam as spam
spam spam beans and spam?

>Relatively speaking... Sinclap = MORON x spam ^2

The guy is a pain in the arse, and we did get rid of him from this
newsgroup by everyone deciding not to answer him in here and not to
mention his name in any posting, it worked, he went, unfortunatly his
name seems to sneak back in, some people cannot resist the temptation,
he is very active in comp.sys.atari.advocacy so people should go call
him names there if thats what turns them on, You cannot actually go
about stopping his postings, apart from the fact that he is the most
annoyin person in here, more annoying than "send 5 dollar$" more
annoying than "meow meow" more anoying than dai@***** fingy postings,
but thats just our opinions and I dont see how he can be censord out,
best to do it same as last time, it worked, just ignore him?

"Mickey Mouse wears a Sinclap Watch"

As for Rich stopping spams etc, I would think everyone would agree
this is a good idea, more so after the recent meow attack! if you can
stop that sort of thing happening again then you keep up the good work
Rich :), does anyone really "want" spams to appear in here? no I think
not, Nice one Rich :)

Cheers.............!ynoT

Source record: 133454

I picked up a Pioneer DRM-602X double-speed CD changer and I've attached it to my Mega ST 4 that has TOS 1.04/Adspeed...I'm using ExtenDos Pro v 2.41 (? latest upgrade) and while it works fine, and I'm able to access all 6 CD's, it still has one peculiar quirk. I can boot up with the CD cartridge holding all CD's in place and it installs itself fine...if I use the CD though, and any of the CD's are left in the forward position and I re-boot, it will go as far as the installing as X drive portion of ExtenDos and then crashes...it crashes anytime and everytime a CD is in the forward position. I can eject the CD cartridge, and reinsert it, so that once again all the CD's are in place (in the cartridge) and it will boot up fine again. Anybody have any idea whats causing this? BTW, I did try booting up with nothing but ExtenDos in the Auto folder, and no ACC's or CPX's active and it didn't make any difference. Also, to add insult to injury, I hooked it up on my TOS 4.04 Falcon with the exact same .CNF file and setup, and it worked fine...Could it be the difference in TOS versions? Thanks in advance for any info...! :)

I've been in this group for several years now, and most people here are
very helpful and friendly.
But then there are those who want to stir things up a little- yes, you know
who I'm talking about ;-)

I don't mind people defending their views.... "my computer is better than
yours"- we all get carried away at times, and even though I get sick and
tired of your comments I have to see that you have the right to air your
views as well.

Nevertheless- keep those discussions in the appropriate group(s)!!!!
One of those is the "advocacy" group for the Atari computers.

The "comp.sys.atari.st" and "comp.sys.atari.st.tech" groups are for us who
have Atari ST computers and try to support each other by coming up with
relevant comments regarding software/hardware, solutions, tips....
eh.. why am I telling you all this?

The bottom line is: keep those discussions you're always so keen to get
into in the appropriate groups!!!!!

Hallvard

I have used the WYSIWYG HTML editors on the PC platform. They are not
all that
they are cracked up to be. Generally I end up using a TEXT editor.
However, it
would be nice to have a TEXT-based Editor that new how to add the
special keyword
to make editing easier. Such that if you wanted to make a target, you
would just
press the target button. This would make some things easier, but its
not needed
to create great pages. I use ProTEXT to create web pages.

3298. Falcon/TT FastRAM

Newsgroup: comp.sys.atari.st
Date: 1996-11-23 00:00:00 UTC
From: John.Kormylo@7861.conchbbs.com
Message-ID: <f14_9611231217@conchbbs.com>
Source record: 133459

FastRAM and TT-RAM refer to the same thing, namely addresses between $1000000 and $FE000000 which are connected directly to the 32 bit 68030 bus.

ST-RAM is accessed indirectly through the MMU chip, and uses either a 16 bit (ST) or a 64 bit (TT/Falcon) bus. The speed depends on whether the SHIFTER, BLITTER or DMA are busy. The MMU has a built in limit of 4 Mbytes (ST) or 16 Mbytes (TT/Falcon), however only 10 Mbytes are not used or reserved for other purposes.

Alternative RAM refers specifically to how Mxalloc() etc. handles the extra RAM. It normally means TT-RAM, but can include RAM from a VME card, for example.

I just tried this site with stik 1.12 and it worked flawlessly.. are
you sure you have the right stik version installed? eg stik1_12.zip
filesize of 60,461 bytes? If so can you send me your tcp values to
look at?. The site could also have just been very slow.. try pressing
control k a few times to see if this kicks it into action when it
stops.

Nick.

All the *implemented* features works here! I have a Falcon with MiNT
1.14/N.AES/MiNTnet and lots of other things installed, at Webspace
actually works!

Yes, it lacks a lot of things, but it still looks promising. Do you
remember v0.8 of CAb (When it was called HTML-Browser.)? Webspace
looks a whole lot better than the early CAB-versions.

:
: This is such utter nonsense. Yes, some of the OS is 68K, but most
: modern apps are proper PPC.
: Do you make this up? Why? Just because Petey talks so much bollocks, it's
: no reason for you to do the same.

I do not make this up. I have my info from people who use/sell/repair
mac. They say that their software is similar to software on my machine,
whereby _most_ code is written in 68k with a few routines written to use
the true RISC instruction set (in my case DSP56001, in the mac case PPC).
You would be hard pressed to write an entire OS on a RISC CPU now
wouldn't you? Surely it would make sense to code tasks that didn't
require much ponies in 68k, and leave the number-crunching to RISC? An OS
is hardly what you could call a number crunching application is it now...

I am glad that we agree on Petey talking from the south end though!! :)

Since the problem seems to be related to magic, why don't you try using
a TOS img with Gemulator (You can put a TOS image in place of magic, it'll
work)
STonX works fine with GFA2.0, I've never tried it with 3.x, but I don't
know why it wouldn't work.

> probably because the simms are so hard to find.

Actually, I was meaning to followup on my own quest, which I posted about some 6 weeks ago now. Thanks to all who replied privately with comments, consolations, etc.... the bottom line seems to be that it's a crap shoot, but trial and error and a little patience will pay off.

I did finally find some 4mb x 9chip (parity) 30pin 60ns Siemens simms that have worked flawlessly and cost only $38.00 ($52.00 Canadian) a piece. The recent bump up in memory prices from their absolute bottom about 3 months ago, meant I paid about $8 more per chip than I would have at their lowest but still... $200 Cdn. for 16 MB of TT Ram, compared to the prices being quoted by certain <ahem> respected Atari dealers is excellent! Not to mention the $800 ($50/MB) you would have paid as recently as a year ago!

My own experience would indicate to stay away from both the newer 2 chip and 3 chip Simms as none that I tried worked with the TT (froze up after 5 minutes every time!), and stick with the 8 or 9 chip variety, with the 9 chip parity version being much more plentiful and usually cheaper.

From: ds@feldspar.geology.uiuc.edu
Message-ID: <57a8rn$shq@vixen.cso.uiuc.edu>
Source record: 133317

Hi all,
This is a repost/retry (the last was a followup on a somewhat unrelated subject). Public thanks to Tom Lamparty (Lamparty@concentric.net) for sending his UNDELETE program for the Atari ST. I apologize if my repost annoys anyone.

Here's my question: I have some Atari-formatted diskes which have Dr. T's sequencer files on them. I think some of the files may have been accidentally deleted and want to try to recover them.

* How should I proceed?

* Is there an "unerase" command that works on the Atari ST?
(note: I have as yet been unable to try Tom's UNDELETE.PRG
but still wish to collect solution ideas)

* Are there disk utilities for the ST (or maybe even the IBM PC)
which will allow me to thoroughly analyze the ST disks?
(note: emphasis on IBM PC's, since that's what I have available
I've seen programs which change atari disks to PC disks by rewriting
a few bytes here and there)

* Can I make copies of the disk images and work on the images? How do I
do this on a PC before I make the Atari-formatted disk "PC readable
with one of the programs which does this? I'd like to keep my
originals as pristine as possible.

* Supposing I could do sector by sector recovery of the disks, does
anyone know the format of Dr T's MIDI sequencer files from the
late '80's?

Thanks in advance for any help you can offer me. As you can see I
am rather unfamiliar with the Atari ST (but am desparate to recover some
data for it!).

>(Falcon, 1040 STe) and different TOS's.

Can't help with this one I'm afraid. I run it on a Falcon (TOS4.04 and
Magic5) and it almost never bombs. Once in a blue moon and then I can't
recreate it. And that is a damn sight BETTER than Internet Explorer 3 (which
GPFs all over the place - now that is unstable). Of course IE3 comes from a
massive multi-billion dollar software house and CAB comes from
Alexander Clauss. Strange huh.

> Also, which versions of the CAB.OVL and CAB_JPEG.OVL should be
>used? How many bytes are they?

Hmm. Not sure. I'm sure someone else can answer this.

> I recall seeing a message saying that the default parameters for
>STIK_CFG should be changed. What should they be???

I'm pretty sure the defaults will be fine. Flinny's set 'em up (I think) and
he know's what he's doing. I can't believe that he'd release it without the
right parameters.

> Will the stalled JPEG bug EVER be squashed????

Err. It has!!! Sound's like you haven't heard the NEWS.

Version 1.12 of STiK is what you want. Get it from Flinny's page and the
sticky jpeg problem VANISHES!! Hurrah!! And mega thanks to all those
involved!

Gary.

What image needs to be replaced, I have a few TOS images but am unsure
what to replace. There are two files with the tos extension in the
Gemsys folder. If I could use the TOS image I'd be able to use the
emulator in English!!!!

I have many TOS images, I myself would like to use them with Gemulator.
I'll trade the Tos images for the names of the files to replace and how
to get it working with these images. :]

Anyone have any experience of the N.AES MultiTOS replacement from Overscan? From the little I have seen at the Overscan site and others it looks good :-)

However, I don't think anyone is importing it into the UK. Is there an English version avaliable, perhaps in the USA or Canada?

Cheers,

Ashley Seabrook

t> I'm having trouble running unprotected floppy games from my ST HD
t> using ICD Drivers, I have tons of games and I hate
t> using the DAMN unreliable 720k floppy's ..... Any suggestions?

It's unlikely to be an easy job, Marc.

If they are truly unprotected the cause of failure is not going to be the disc drivers.

Most floppy based games have their search paths hard coded and explicitly look for files on A:

For these you would need to crawl through the binaries with a sector editor looking for A:\..... and replacing with C:\.... (or whatever drive you want to run from).

Mind you, there are loads of other kludges in games s/w which could be causing the probs.

```
Atari NOS 0.43 22 November 1996
by Mike De.Petris
mike@bbsgate.interware.it
2:333/608@fidonet.org
90:700/104@nest.ftn

Ok, after long time I took the Atari Demon NOS project from David Nash.
I just needed to make it work with my provider, which runs ppp on an NT
server with pap authentication, so this version concernes only this
problem, after long searches this is what I found:

Changes made to Jnos 1.11x3 to yield Jnos 1.11x4 (20 Oct 1996):
...
I tracked down the inability of Jnos PPP to accept a new IP address to how
ipcp_check() treated a local IP address suggested by a config NAK received
from the remote peer. This address suggestion was accepted only if the
local ppp address was undefined, ie, 0.0.0.0, and 'allow yes' was in effect
(this is the default). Once it became defined, no further changes were
allowed,
thus causing problems for Jnos which can redial and reconnect after a failure,
without reinitializing the PPP routines, in the case where the ISP peer is
assigning a (variable) dynamic address. I've changed pppipcp.c to not refuse
the suggestion of a new IP address, unless 'allow no' is in effect. The
previous behaviour can be retained by #defining PPP_NO_LOCALADDR_CHANGE, and
I'd like to hear why it might be needed! There's a comment in ipcp_opening()
that perhaps existing tcp connections should be shut down. This could be done
via a variant of the reset_all() routine in tcpuser.c ... but normal timeouts
and retries may suffice to clean up old connections.
...

So I took pppipcp.c from Jnos and recompiled the thing. Not so simple, I also
had to correct various points of the code, but don't warry, now it works.
The resulting executable are in four different archives:

N043.ZIP Atari NOS for any 68000 and dynamic IP addressing
Name Normal Packed CF Method Date Time
------------------------------- ------- ------- ----- -------- --------
NOS043.TTP 266204 143722 46.0% Deflated 24 Nov 9
------------------------------- ------- ------- ----- -------- --------
N043IP.ZIP Atari NOS for any 68000 and fixed IP (PPP_NO_LOCALADDR_CHANGE)
Name Normal Packed CF Method Date Time
------------------------------- ------- ------- ----- -------- --------
NOS043_NOIP.TTP 266216 143710 46.0% Deflated 24 Nov 9
------------------------------- ------- ------- ----- -------- --------
N04330.ZIP Atari NOS for 68030 and dynamic IP addressing
```

```
Name Normal Packed CF Method Date Time
-------------------------------- ------- ------- ----- -------- --------
NOS043_30.TTP 264741 143215 45.9% Deflated 22 Nov 9
-------------------------------- ------- ------- ----- -------- --------
N04330IP.ZIP Atari NOS for 68030 and fixed IP addr. (PPP_NO_LOCALADDR_CHANGE)
Name Normal Packed CF Method Date Time
-------------------------------- ------- ------- ----- -------- --------
NOS043_30_NOIP.TTP 264753 143243 45.8% Deflated 22 Nov 9
-------------------------------- ------- ------- ----- -------- --------
```

Feel free to cantact me by email for any questions.

I am currently porting the complete Jnos and Demon PC Nos to Atari, so y
get POP3 mailboxes, POST in news, and other "modern" features, but this 0.43
will work with Oasis or other software using old NOS 0.42.

Please write me, if you know of any source code worth to be included in Atari
NOS, the upgrade made by the author of NOS_POP3 would be very interesting.

N043_S.ZIP Is the archive with C sources.

All archives are available on my BBS, will soon be hatched in FAN I think, and
I will make a link at my homepage, until distributed on ftp sites.

Hi, I am looking for the same thing (TOS image). It seems that
Gemulator doesn't work with my dumped TOS 1.0 image.
(I have a very old 1040st)

so if you get an image please email it to me, or perhaps let me know
where to obtain an image ...
thank you.

AK> application is responsible for this behaviour. APPLICAT frees
AK> all memory it uses. There is only the fragmentation problem.

Hello Andreas! I for one understand your explination that the memory is freed up. The problem - don't most Atari programs need a 'lump' of memory, and once the memory becomes fragmented, the small pieces are really not available? While this is not the 'fault' of anyone, it does mean one has less & less ram that is useable.

Or, do I mis-understand this?

> Just don't get me started on the file selector though... I

AK> Would you please repeat the sentences about the file selector
AK> in simple English that can be understood by non-English and
AK> non-US people? I do not know the word "rile up" and "am yet to
AK> find".

I am _very_ happy & comfortable with UIS 3 myself. I use it _a lot_, and have grown used to it. No matter how good someone else's file selector is, I _always_ prefer UIS3. To me, it is not, 'which is better', but 'which I am comfortable with'. I really dislike programs that don't let me use UIS3. To me, any other file selector is not as good. (Even if it has some 'better' features.)

I don't know, but guess that this is what the guy is talking about in the above. To me it is not that your file selector is bad (I've never tried it! :), but it just isn't the standard I have used for seven years.

Hi!

These specs came from CENTEK itself!, in a snail mail which was sent to
the french ATARI users. Of course, these are the **first specs** for
Phenix 040/060. Nobody has said that 68060 120Mhz was already available!!
Hahaha!! I think it is planned for future versions of Phenix! CENTEK is
now working on the 040 version of Phenix. If you don't believe me, I could
send a copy of these Centek pages (in French) to someone by snail mail.
So, this person could tell you about what she read. Ok?

The (Demo?) version of DOLMEN (the OS) should be showed at Atari Show in Paris.
The boot will be available (when finished!) for the "CENTurbo 2" accelerative
cart (inside a 64Kb Flash Eprom). Graphic parts will be installed on hard disk.

Now, we aren't able to say anything more about it. Centek should give us more infos at Atari Show in Paris (December, 7th & 8th).

Regards

Hello Kemosabe,

What a Web site...52 links, 4 jpeg's, 25 gif's, and more end tags than KMart.

Anyway, my Falcon downloaded&displayed the mess in 1 min, 25 sec.(no problems)
I'm using CAB1.5_030, STiK1.12, CAB.OVL1.18 and the WWWCACHE in a 4meg Ramdisk.
I could link to all sites(51) except the Football Bullentin Board. It has a
strange http ending...(could be offline) BTW: 28.8 Modem, TOS4.04

For Web page designers, you might check it out as it is a hodgepodge of every-
thing. HAD to Hotlist it though, because of all the good Sports info.

Hope this helps some Matt :) Ohio State vs Michigan? Oops...

n> In all honesty I've yet to figure out what Enviroment variables are or
n> what they're used for. Guess best left alone until I need to use them!
n> :)

As has already been mentioned, the location of AUTO\APPS is defined by an environment variable - maybe you need to start now <g>

If you've ever tried to start a program that couldn't find its data files or tried to launch one proram from within another and it's not been found, you need an environment variable. The more time goes on, the more the subject comes up IME...

n>>> On another point - today I was trying to free memory for a fairly
n>>> memory-hungry application. I tried downing the resolution, but I
n>>> noticed every time I changed res, I was losing more and more
n>>> memory...
>> I find myself *wanting* to change resolution quite frequently. The
>> fact of the matter, though, is that I can't seriously do it without
>> losing great wads of RAM at every opportunity.
n> So it's not just me then.

Certainly not. I'm not clear whether it's just something suffered by people running 68000 processors or whether it's everyone. Certainly, being stuck with 4Mb maximum memory, it comes up as a problem much sooner -with 14Mb I may not care tbh...

n> Have you noticed that *SOMETIMES* killing off MagxDesk from the program
n> manager and restarting it can free up some memory???

oo-er - never tried it...

>> It's not just resolution changing that's the problem though. If I run
>> APPLICAT, exactly the same thing occurs (even worse tbh).
n> Well, I've not yet had this experience with APPLICAT. But then I
n> haven't touched it in a while, either.

Run it once and accept a new program in there - I can lose up to 800k quite easily.

>> Just don't get me started on the file selector though... I know I rile
>> people up about it, but I still say I'm yet to find one that works 100%
>> with Magic and the MagxDesk one lacks features that were available in
>> TOS 1.0!
n> Well, yes, the included one is a tad basic, I will agree. At least it
n> deals with long filenames. Personally I use Selectric 1.10, and haven't
n> had any problems with it yet. Touch wood.

Selectric doesn't survive a resolution change under NVDI ET4000 (a Selectric problem AIUI) but it's what I've started using as the best compromise on size and capability - UIS is used on occasion too, but NVDI's replacement SHUTDOWN screws it up.

>> Will it be fixed? Official answer - no B^{<
n> The file selector or the memory problem??

Both I think.

n> An improved file selector we can live without for the time being I
n> guess, as there are alternatives available. But the memory loss problem
n> is a biggie.

Memory is the issue with me. I have to run a very basic boot setup to run Papyrus at all, so the likes of Freedom is a luxury that I can do without. Selectric is the best I can manage with.

n> Sometimes I'm forced to reset to regain the memory

Yup, but that totally negates the benefits of one of NVDI's features and wastes a fair bit of time too... Try closing desktop windows - sometimes it works (and sometimes it doesn't).

n> When you're down to 300K with no apps running, there's not an awful lot
n> you can do.

True.

n> However, Andreas must be reading this lot and possibly taking it all
n> quite personally. So I'd just like to say that MagiC is very good, and
n> no matter what we all say, you can tell that we appreciate it simply by
n> the fact that we use it every day. Certainly for me when I switch my
n> Falcon on it boots into MagiC by default. So Andreas, we are not
n> critisising your hard work, it's just there are a few little buglets
n> still in there that do take a layer of sheen off what is otherwise
n> wonderful.

On the whole I agree, but it really gets to me that we get something recently that seems to justify a whole new version number that doesn't begin to address some major shortcomings. I started using Magic with v4 and was prepared to make some dramatic changes to my setup to accomodate it, but I expect the obvious problems to be looked at as well as development in other directions (from which I get no personal benefit at all).

HS> -

If CSB is HD installable, how on earth do you do it? I've been playing it for so long from floppy and, although it won't make any difference to the speed, it would be nice to have it on HD, just in case the master disc decides to go belly up.

Regards,
David.

PS. Since CSB and DM use very similar code to load the game, if CSB /is/ able to be installed on a HD, then DM should be able to as well.

>> Can someone describe each TTP file in the C:\GEMSYS\MAGIC\EXTRAS\
>> folder, how to use them, why to use them, when to use them, what other
>> utilities can be placed in there?
e> That's been true since MagiX! v2 came out in the UK, Harry.

Surprising the answer hasn't been made more obvious then...

e> ADDMEM was one I needed to use with JetMail which wasn't documented
e> anywhere and it was only being in NeST which helped me round that one.

This being Magic's equivalent of Foldernnn? Is that right? It's run from the normal auto folder? What error would I expect to get that indicates whether I need it or not? Does HDDriver's settings make it unnecessary or is it something completely separate? I still don't know.

e> LIMITMEM modified the PRG files it worked on, something I think is
e> unacceptable under any circumstances, but it didn't even remove the
e> extra code when you called it to remove the memory limitations. OK, I
e> could reinstall from a backup but should I have needed to?

So it's buggy? Is it fixed with M4/M5? Is it made unnecessary by the memory limitation option in Install Application of Magxdesk? It's run by dropping a file on it?

e> MagiC is a wonderful piece of coding but it will never achieve its full
e> potential until non-German users and, especially, developers get their
e> hands on decent documentation.

Absolutely right - it's been asked for from as long back as M4 was reelased over here. If it's used and understand people will be happier to program for it here too and it'll encourage people to buy it instead of being warned off by persistant unresolved incompatibility reports. I'm pleased to see Magic aware programs but I'm more than a little unhappy to know that there's little or no chance of them arriving in English unless the brave few employ their time free of charge to translate them.

e> How can you hope to make things compatible without decent documents
e> when programs which run beautifully under TOS and MultiTOS lock MagiC
e> solid? If it is not 100% TOS/MultiTOS compatible (and the authors tell
e> us it isn't) then it's incumbent on the authors and their suppliers to
e> give us the tools to sort things out.

And even arrogantly proud to say it's not compatible too - the onus is
certainly on them to document the differences ISTM.

a> : were perfectly happy with MagiC's own SHUTDOWN. The result is quite
a> : the opposite of the claimed 'resolution change without a reboot'.
a> Before blaming MagiC, first take a look at MEMEXAMN. It tells you where
a> all memory has gone. And you will see which application is responsible
a> for this behaviour.

Memexamn tells me nothing at all. An endless list scrolling up the screen is possibly of use to someone in the world, but it's not to me and I'd guess a large majority of others. I ran a few programs and duplicated my memory loss problem (very easily) - I ran Memexamn and could see only very few blocks of fragmented free RAM and no reference to any of the programs I'd used to cause the memory loss. Absolutely no use at all.

Instead, I ran FREEMEM.CPX and saw the 200k of fragmented memory - much more useful, but it still doesn't attribute the problem to anything.

If the problem isn't associated with MagiC or MagxDesk, whyis it sometimes possible to reclaim the memory by closing desktop windows (and sometimes not possible)?

a> APPLICAT frees all memory it uses.

If I only call Applicat and assign an icon or just install an application, why is memory fragmented when I return to MagxDesk?

a> There is only the fragmentation problem.

Why do you undervalue this? Fragmented memory is not available for any program to use - it is lost until after a reboot. If MagiC could somehow make the memory available to new programs when I try to run them I would be happy - but it can't as far as I know. Can it? If so, how?

a> : Just don't get me started on the file selector though... I know I
a> : rile people up about it, but I still say I'm yet to find one that
a> : works 100% with Magic and the MagxDesk one lacks features that were

a> : Will it be fixed? Official answer - no B^{<
a> Would you please repeat the sentences about the file selector in simple
a> English that can be understood by non-English and non-US people? I do
a> not know the word "rile up" and "am yet to find".

Sorry - an americanism...

To rile up = to annoy / aggravate / anger / irritate

Am yet to find = cannot find <etwas> yet

The file-extender mask can't be edited - it was available in TOS 1.0

Various problems with UIS, Selectric, Freedom 1.x, Freedom 2.x (some related
to the file selectors, some related to MagiC).

Source record: 133403

I'm trying to learn Personal Pascal 2 and I would like to know where I
can find some source code for any kind of program to give me some examples of
how to use the language.
Also, I have Tackle Box ST, and I think I'm missing a disk. I haven't
used it in a long time and I can't remember how many disks it came with.
I have 2 original disks and the backups I made of them. I can't find any
backups of any other Tackle Box disks. The reason I think I'm missing a
disk is because the manual mentions something about a disassember program
and I can't find it on any of the disks. Can I find this program in the PD.

>Nope - you only have one modem line and if is busy, it is busy. I have

This is not the case.

I regularly send/receive data to/from multiple machines at the same time over
a PPP connection and I only have a 14k4 modem!

For example, I might use aFTP to receive a file from an FTP server and while
that's coming down I might look at a WWW page with CAB and search for a file
with archie.

Naturally the speed of your modem has to be divided among all the data that is
being transferred. However, when looking at WWW pages, most of the time is
spent viewing the page, not on data transfer. In addition, many FTP sites
are quite slow and so you in fact get _better_ data throughput when transferring
to/from multiple ftp sites at the same time, even on a slow modem.

>successfully, with MagiC 4 (TT030) downloaded large files on a slooow
>night and gone into AtariWorks and done work, however. You do have to

>fairly well. With the Falcons slower clock speed, I don't know how
>well this would work :).

With MiNTNet, I can send and recieve data to multiple hosts at 14k4 in the
background, and there is simply no noticable slowdown at all. I can continue
using other applications and would never know from the speed/responsiveness
whether background data transfer was occuring or not. This is on a TT030.

This is my experience with MiNTnet too, and I'm using it on a Falcon.
MiNTnet (And MiNT-programs generally) is very stable and nice, I
wouldn't go back to MagiC and STiK unless someone (Andreas Kromke? ;-) pointed
a gun at my head.

I don't know how "clever" TOS is, but if a program requests a block,
and there is a block of fragmented memory thats big enough, wouldn't
that block be used?

I don't think this problem is that serious. I'm now running
MiNT/MiNTOS/N.AES +++ and after 4 hours of use (No reboot.) I have
7792K free in 28 blocks, and the largest block is 7689K. This means
that I have lost 103K the last four hours.

I didn't have any real problems with fragmentation with MagiC either,
but since MagiC always crashed after an hour or two I don't know if
it's better or worse than MiNT when it comes to memory managment.

>make the memory available to new programs when I try to run them I would be
>happy - but it can't as far as I know. Can it? If so, how?

Relocating programs "on the fly" would be very difficult with
TOS-programs, I think you would need to modify the code itself
everytime you do it.

>Various problems with UIS, Selectric, Freedom 1.x, Freedom 2.x (some related
>to the file selectors, some related to MagiC).

I never had any problems with Freedom 1.15 when I was using MagiC 4,
but the MagiC fileselector was crap! When running some applications in
single-mode, the fileselector almost always turned up blank. No files
was shown, and nothing could be selected.

It really depends on lots of things.. seems random to be.. and it only
happens once in a blue moon.. much less than netscape or MSIE anyway
:)

> Also, which versions of the CAB.OVL and CAB_JPEG.OVL should be
>used? How many bytes are they?

Well everyone should have no problems with cab.ovl 1.18 some people
have problems with cab.ovl 1.2 and 1.2h..
Cab_jpeg.ovl just use the one in the cab release you have.. unless you
want to use the jpegd program on the falcon if you do use the version
supplied with it.

> I recall seeing a message saying that the default parameters for
>STIK_CFG should be changed. What should they be???

Well here are mine.

TTL = 64
PING_TTL = 255
MTU = 576
RCV_WND = 4096

> Will the stalled JPEG bug EVER be squashed????

Its gone.. try getting stik 1.12 from my www page.

> In article ("Christopher Good") wrote:
> >What's a BeBox then?

The excitement of the BeBox is based in the use of two PPC
Motorola microprocessors working in symmetric multiprocessing,running PPC
native code, etc. I found some info about the audio hardware that seems
interesting to me:

Beginning quote:

I/O Board Components and Connectors
Qty Component Connector
--- ----------------------------------- --------------
1 "GeekPort" 37-pin D-shell
4 Advanced serial ports 9-pin D-shell
1 Mouse port, PS/2-type 6-pin mini DIN
2 Joystick ports 15-pin D-shell
2 MIDI out ports 5-pin DIN
2 MIDI in ports 5-pin DIN
3 Infrared (IR) I/O ports 6-pin mini DIN
1 Internal CD audio line-level input 5-pin strip
1 Internal microphone audio input 4-pin strip
1 Internal headphone audio output 4-pin strip
2 Line-level input (L/R) RCA jacks
2 Line-level output (L/R) RCA jacks
1 Microphone input stereo phono jack 3.5 mm
1 Headphone output stereo phono jack 3.5 mm
1 16-bit stereo sound system
@ 48 and 44.1 KHz

We demonstrated that 16 channels mixed in software had no problem
on our machine. Remember that the PowerPC 603 is a very fast
processor compared to 680x0 family members, and we have two of them.
Also do not forget that our system is unencumbered with layer upon
layer of software, and unlike the Mac, we are 100% native PPC code.
We also support the ability to set priorities of tasks, so it is
even possible to *effectively* dedicate a CPU to a thread (actually,
the task may bounce from CPU to CPU).
The Be OS currently supports AIFF, WAV, and Sun-NeXT audio.

But, as an electronics people, I want to see the "Geek Port"

"GeekPort" is a new feature connector unique to the BeBox. It
provides digital and analog I/O and D.C. power through a 37-pin
connector at the back of the chassis. This port is aimed at
experimenters and small entrepreneurs so that they may bring unique

functions to the BeBox. The GeekPort is located on the ISA bus and
can be accessed by the CPU, a PCI busmaster card, or an ISA
busmaster card.
End quote. www.be.com

I'm sure that there is a lot of influence from our beloved
platform. You know the say, "after getting the hardware, the only thing we
need is a whole bunch of software" (and good company management ;->)

)))) End informative session(((((

I'd just like to add that there is a tiny program available on my pages
called BackPlay. This can be used in conjunction with NED PLAYER and CAB so
that you can seamlessly play samples from within CAB without any windows etc.
being displayed in NED PLAYER.

This will be even more useful when CAB recognises <BGSOUND> :)

I just bought (upgraded to) magic 5.o3. Is there some way to get these bugfixes?
Also Applicat does not seem to work for me either in 4 or5.
Regardless of what applications I install, when I double click on a file I am invariably sent to the viewer that is installed. That is if I click on a STW file (atariworks), which is registered to Atariworks, I still get the viewer. If I don't select a viewer, I get a dialog saying that there is no application isntalled (even though there is)
Any suggestions?

No, I never confused "PowerPC" with "PowerMac", Power PC is what you lazy
typists call PPC :)

My beef is that at the beginning, IBM promised a PPC computer that will
run Intel-coded programs much like PowerMacs run Mac apps w/68K code.

And how about a PPC that runs DOS programs as well as 32-bit Windoze, eh?
Never could find a NT workstation at Wal-Mart :)

> There are forthcoming machines with a new design that can run both.

I'll believe it when I see them in the stores. Never did took PSX or
N64 seriously till I saw them on display :)

Only thing I've seen for ST computers is STSPEECH, a machine language program that's called from other programs to talk. Like all Speech synths, it sounds goofy.

I have a STOS program that can tap in ST Speech and read out a whole text file. Just make sure you don't have any square brackets as this locks the program up. This one game, Squared Off, uses it and was cool. It would also go great with an Eliza program, imagine typing in all goofy stuff just to get funny responses. We did that in my dorm wing :)

: I've used for a couple of days now, and while it indeed is faster when
: formatting pages,

To end up all the speculations:
In fact, CAB030 is about 30% faster when formatting /tables/.
I did the complete beta-testing concerning this topic.
The speed-advantage results are true for a real 68030-processor.
What will happen on on a 68040, 68LC040 or 68060, I can't say -
because I have none available.

On a PowerMac running MagiCMac, i.e., the 68k-emulation mode,
you will notice definitely /no/ increase in performance; not a
tenth of a second.

This is due to the 68k emulation the PowerMacs have built in.

Hope this helps,

I noticed under MagiC Mac that Pagestream likes to hog a bunch of
memory as does Calamus. I tried Limitmem on Pagestream and the
application would then lock up MagiC Mac. I don't remember the results
running Calamus. Now I have MagiC 5.?? for my Falcon. As I understand
this thread, I don't need to run limitmem on any application as that
is taken care of by MagiC, and hopefully MagiC Mac 2.0 (if it ever
arrives
in the states). Heck, i'm still trying to decide if I should load
MagiC 5 at all:).

While we're on the subject of MagiC 5, should a seperate area be set
aside
for files with long file names or will the harddisk driver still see
them
when running under TOS an not over write the areas?

Are the bugs worked out with loading MagiC into fast ram with the
starting
address the same as the TT's?

Personaly, I don't like "auctions" in the newsgroup. If you have
something for
sale, post it with a price. If it dosen't sale, post it again later, but
I hate
to read through all of the "auction updates". If you sell an item to
someone,
be very clear on what the item is for and its condition. The next step
is
pretty easy. Get the money in advance. On most items I sell I offer to
buy
the item back within a few days, minus shipping, if the buyer is not
happy.
I usually do a follow-up email to check again if they were satisfied
with the
purchase.
Insure the package for the sale price at least. I sold a C-Lab Mark X
mother
board for quite a large sum this way. We both ended up happy. I have
sold
box loads of older Commodore and Atari items this way as well.

Auctions shouldn't be used for three dollar games. Just advertise
what you have for sale. If you don't know what you want for it,
give it away.

Date: 1996-11-25 00:00:00 UTC
From: JPasquini@gnn.com
Message-ID: <57ds92$ok4@news-e2d.gnn.com>
Source record: 133232

I have a good assortment of Atari ST hardware and software that I would like to get rid of. The bunch includes 2 1040's, one 520, several related hardware items, a couple of SM124 monitors, and LOTS of software (no games, just applications and utilites). I also have an extra mouse for sale. If interested in anything, or you are looking for something, please let me know and I'll get back to you. Thanks!

The BeBox destroys any 040 class machine.. I saw one in Iowa City and it rocks..

A bare bones BeBox with two 603's and floppy can be had for $999..Just add the HD, memory, CD, keyboard and mouse from the PC organ bank..

It's official, the Be OS will be shipped with all PowerComputing machines in the Q1/97..

DA> disks by rewriting a few bytes here and there)

I am unsure about using PC utilites, but There are a lot of PD ones
on the ST that could. Also Diamond Edge is a very good ST file
utilities commercial program.

If the disks happened to be formatted at 10 sectors per track on an
ST, you can about give up reading them on an PC clone. Just
something to watch for, as it was common for some people to format
disks at 10 sectors, 82 tracks for more room with on an ST.

I tried the Geneva 5 demo under MiNT 1.14 last night, and Gembench
showed some stunning figures:

Graphics: 491%
CPU: 150%

This is on a Falcon with 18MHz bus and 36MHz cpu. The graphics-result
must be wrong, since I usually get something around 300% on both MagiC
and N.AES, but it felt much faster than MagiC and N.AES, so there must
be some truth in it.

>changing it's behaviour? Or you have MODEM.CPX or something else to set

No, I've just renamed /dev/modem2 to /dev/ttya in MINT.CNF. It
shouldn't do any difference.

>the serial interface to 134 before PPPD is started?

I *never* use MODEM.CPX, since it messes up for some programs. There
is also no need to use it, most programs configures the serialport to
their needs anyway.

> To be sure, you could call the MODEM.CPX before and after starting the
>PPPD, it will show the actual speed. If you set the CPX to 1200 bps, then
>start PPPD with 134 in it's parameters file, the CPX will stay at 1200
>(and the real modem line too, tested with "AT/") at least here at home...
>If you do this, tell us the results please.

Sometimes I use CoNnect to dial up, which sets the port to 57600. But
most of the time I just use chat, and the port is always set to 57600.
How do I know this? Well, I always get "CONNECT 57600", and the max.
throughput is ~5700cps.

>others it looks good :-)

Yes, it's very good. It's the most stable OS I've ever tried on any
Atari, I can use it for hours and hours without one single reboot.
It's cheap too, much cheaper than both MagiC and Geneva. And since it
run over MiNT, you can use all those MiNT-goodies too.

>However, I don't think anyone is importing it into the UK. Is there
>an English version avaliable, perhaps in the USA or Canada?

I don't think there is a english version available. It doesn't really
matter though, you almost never see any German dialogs anyway (If
you're not using N.Thing that is.).

To All,

I have recently made a couple of postings which explains how to obatain
a working Atari ST Emulator. I would just like to make it clear that
my intent was to allow people who were considering buying an Emulator
to try it out first. My aim was not to give people a way to get out
of buying a full version.

I thought I'd just get that off my chest.

Thanks,

Ben Hills.

Source record: 133270

Just wondering what kind of problems would you have with a CD-ROM
(Pioneer CD-Changer DRM) if you had the wrong kind of SCSI cable.
For example, say you had a SCSI 1 cable hooked up and needed a
SCSI 2? (or will they even interconnect?) The cable I'm currently
using is a 50 pin/50 pin for daisy-chaining the CD-Changer to an
EZ-135...its starts just fine and everything works, but if you
reset the system, and one of the CD's is in the play position, it
2-4 bomb crashes...eject the 6-CD cartridge, reset, and its fine
again...Thanks in advance! :)

> NoDesk, Thing, etc.

I'm having terrible trouble getting thing to work with Geneva (though since I've got Neodesk 4, I haven't tried too hard :-)). The problem appears mainly to be with linking other software as modules into Thing. Kobold goes through the motions of working, but doesn't and any TOS programs ignore Geneva TOS completely and write all over the screen. It works fine with MagiC. All suggestions gratefully received.

Titan Designs were doing them for UKP 150 recently. Check with them for
the latest prices because of RAM price fluctuations. I'd buy one myself
if I didn't have to buy a new car to get me to work so I can afford
things like RAM upgrades ;-)

3390. Mountain Software Shareware Bundle

Newsgroup: comp.sys.atari.st
Date: 1996-11-25 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <57cibf$ait@news.pacifier.com>
Source record: 133280

```
Mountain Software Shareware Bundle
==================================
Now Just $20!

Several weeks ago, I decided to offer all nine of my Atari ST shareware
programs as a single package. These programs originally sold individually for
$10 to $20 each, and were recently reduced to just $10 each. However, since
demand for the individual products has declined drastically, and several
users showed an interest in the Shareware Bundle, I have decided to reduce
the price of the bundle and stop offering these products individually.

The shareware bundle includes the following programs:

1. Easy Base......... Simple Database Program
2. Easy Go........... Easy to use program launcher
3. Easy Money........ Basic address book/financial planner
4. Learn My Numbers.. Educational game teaches numbers 0-9
5. Manualizer........ Prints any text file in booklet form
6. Mountain View..... A really handy text viewer
7. Movies at Night... Animated screensaver system
8. Pen Pal........... An easy to use text editor
9. Tuzzle............ A fun sliding tile puzzle game

If you would like to order the Shareware Bundle, please send a check or money
order for $20 in US Funds to:

Mountain Software
6911 NE Livingston Road
Camas, Washington 98607 USA

Thank you again for all your support!

Markus,

Is there anything I can do for now so I can use med. rez.? Maybe a
patch I can load in the auto folder or something???????

Thanks,

George Hoffman

Would someone email this to Markus, please. Newsie and Antmail both
clip the address and it bounces back. Thanks.

3392. Differences between Falcon030 & C-LAB Falcon

Hi Chris,

68060 does indeed need a heat sink.

We have not had reliable performance from the 68060RC50 above 60MHz.

All the best,

Chris @ Computer Direct

THIS is a vital question!
I've found CAB/STIK impossible to use. -It bombs out all the time!
My machine is a Mega STE 4MB.
I've tried disabling every ACC except STIK.
I allocated 2megs of memory to STIK.
NOTHING helped. I really gave up!

-However CAB itself IS stable when run under MiNTnet!!!!!

Because of the reduced demand for Mountain Reader II and The Recipe Box, I would like to unload my current inventory of these products. Therefore, I am offering MR2 and Recipe Box for only $15 each until December 31, 1996.

This would be a great time to pick up an extra Christmas present for a friend, or for yourself.

If you would like to order one of these products, send a check or money order for $15 in US funds to:

Mountain Software
6911 NE Livingston Road
Camas, Washington 98607

Thank you,

Anthony Watson
Mountain Software

It looks very good indeed. I use N.AES for almost 6 months now. There
are a few problems but this has probably to do with my current setup.
I use N.AES in conjunction with MiNTnet and Minixfs. The major
programs I use with this configuration are CAB 1.5, Calamus SL version
1995, Idealist, Everest, Imagecopy 4, Kandinsky 2.51, Kobold 3.5 (have problems with
long filenames) and quite a few other goodies. The most programs haven't any
problems. However some programs, mostly older, do have problems. Oasis
1.35 for instance doesn't work quite well.
I'm doing this on a TT030 4/16 mb with a Crazy Dots II graphic card
(resolution 1024x768x256)

I bet all the memory was grabbed by the singlemode program. I have
found that programs requiring singletasking are invariably those that
hog all the memory as well.

There are also supposedly "multitasking friendly" ones which initially
hog all the memory then hand it back. In many respects these are

worse! Fragmentation here is a positive bonus. :-)

3399. Re: multitasking

Newsgroup: comp.sys.atari.st
Date: 1996-11-25 00:00:00 UTC
From: guy@swampdog.demon.co.uk
Message-ID: <849011968_OASIS_@swampdog.demon.co.uk>
Source record: 133289

I thought I'd go check out this alleged memory loss thing. The one predictable place where it occurs for me is when I execute Oasis. Sometimes the loss is small (as here), sometimes large but one thing is certain about it - it only happens once so I never bothered finding out why before. Anyway here goes ...

MagiC (2 btw) before Oasis133E ...

```
[snip irrelevent & identical bit]
83 17f8e8 ANDR 1ed2 170eba VT52.PRG 17f640
84 1817ca ANDR 2000 170eba VT52.PRG 17f8e8
85 1837da ANDR 298 170ebap VT52.PRG 1817ca
86 183a82 ANDR 100 183a92 aes 1837da Basepage
87 183b92 ANDR 16d4a 170eba VT52.PRG 183a82
88 19a8ec ANDR 298 170ebap VT52.PRG 183b92
89 19ab94 ANDR 28e6 19aba4 MEMEXAMN.TTP 19a8ec Basepage
90 19d48a ANDR 10000 19aba4 MEMEXAMN.TTP 19ab94
91 1ad49a KROM 24ab56 0 frei 19d48a
```

MagiC after Oasis133E ...

```
83 17f8e8 ANDR 1ed2 170eba VT52.PRG 17f640
84 1817ca ANDR 2000 170eba VT52.PRG 17f8e8
85 1837da ANDR 298 170ebap VT52.PRG 1817ca
86 183a82 ANDR 2000 e4a86 EASE.PRG 1837da
87 185a92 ANDR 100 185aa2 aes 183a82 Basepage
88 185ba2 ANDR 16d4a 170eba VT52.PRG 185a92
89 19c8fc ANDR 298 170ebap VT52.PRG 185ba2
90 19cba4 ANDR 28e6 19cbb4 MEMEXAMN.TTP 19c8fc Basepage
91 19f49a ANDR 10000 19cbb4 MEMEXAMN.TTP 19cba4
92 1af4aa KROM 248b46 0 frei 19f49a
```

and we see a surprising result. I must admit I was expecting to see some sort of system allocation which caused a fragmentation (which would not be a bug) but 86 reveals Ease has simply decided it needs some memory. Everything ok!

It sounds as if you are attempting to auto-boot from the Megafile, and the booter or something in the AUTO folder is corrupt.

Assuming you have a hard drive utilities disk, boot up with the Megafile shut down, then power it up and wait for the drive to spin up. Run AHDI.PRG from floppy and see if you can then access the Megafile. If the answer is yes, find the AUTO folder on C:, and rename everything in there from *.PRG to *.PRX, and in the root of C:, rename all the *ACC files to *.ACX - that will take care of any possible conflicts. Also delete C:\DESKTOP.INF in case it's trashed - you can always make a new one.

Then reinstall the boot program from floppy (use HINSTALL.PRG to install it) and see if you can boot from the hard drive. If you can, you can start re-enabling the AUTO proggies one at a time until you find which one (if any) causes the problem. When you find it, delete it.

If all of the AUTO folder programs are OK, then start re-enabling the ACCs until the problem comes back. The culprit may then be deleted.

Good luck!

Some command differences - nothing insurmountable.

>2/ Is it possible to connect a SCSI II cd-rom drive to an Atari (not a
>Falcon, but a MEGA ST 4)? No special Link or something?

You will need a host adapter for anything other than a Falcon or TT. The
ICD AdSCSI+ or the Link96 would be the best.

>3/ What would be best, a SCSI I cd-rom drive, or a SCSI II cd-rom drive?

Trying to locate a SCSI/1 drive will be an interesting exercise. I should
advise against even trying. Just get SCSI and don't ask about SCSI 1 or 2.

>4/ Would it be possible to connect a SCSI cd-rom drive to an Atari Mega
>ST 4 when the Mega ST 4 doesn't have a harddisk?

Certainly - but again, a host adapter is required. And once you have the
host adapter, a hard disk is trivial.

Also, you will need a driver for the CD - I'd suggest ExtenDOS pro. I'm
told there are other options, but ExtenDOS works for me; none of the others
suggested has done so.

>CPU efficiency under Geneva was better.
This just proves that you shouldn't place too much importance on
the results of a simple benchmark program like GemBench. After all,
Geneva isn't suddenly going to be able to make your CPU multiply
numbers more quickly.

MagiC is pre-emptive, so GemBench gets interrupted while it looks to
see if any other task has work to do. In you case, there is no other
running task, so that's wasted time. In the real world, it's a different
story.

That, I guess, is why the other poster asked about MiNT.

>to any of the programs I'd used to cause the memory loss. Absolutely
>no use at all.

This tool only tells you which memory belongs to which program. Once
the program quits the memory is added back into the free list. Memory
is fragmented if you see more than one free list. In most cases, it is
simply this which gives the impression of memory loss.

>Instead, I ran FREEMEM.CPX and saw the 200k of fragmented memory -
>much more useful, but it still doesn't attribute the problem to
>anything.
>
>If the problem isn't associated with MagiC or MagxDesk, whyis it
>sometimes possible to reclaim the memory by closing desktop windows
>(and sometimes not possible)?

Let's say you have 1Mb of free memory all in one block. Now assume you
have two programs: (a) which uses 200k and (b) which uses 300k.

If you run (a) you have 800k free memory. Now you run (b) and have
500k free memory. If you quit (a) you have 700k free _but_ this is
comprised of 200k(free) + 300k(b) + 500k(free) so any program which
needs more than 500k in a single block will fail. If you terminate (b)
then you should end up with the full 1Mb again.

> a> APPLICAT frees all memory it uses.
>
>If I only call Applicat and assign an icon or just install an application,
>why is memory fragmented when I return to MagxDesk?

It is unfortunate but the answer depends somewhat on the internals of
the program being executed.

> a> There is only the fragmentation problem.
>

>somehow make the memory available to new programs when I try to run
>them I would be happy - but it can't as far as I know. Can it? If
>so, how?

It just appears like that. The memory is available and it will be used
if possible. What can and does happen with any multitasking system is
that the memory gets fragmented into so many blocks that no single
block is big enough to hold the program you want to run. If it can be
loaded then when it asks for memory it can be obtained from any of the
fragmented blocks. Naturally, the system is constantly looking for
opportunities to merge these smaller blocks back together into bigger
ones but it can't do it unless to the two blocks are next to each
other with nothing used inbetween.

Hmm, tricky! I just realised there's no way to tell what I have run it on! Mostly, it is restricted to the CLI tools that came with my MWC compiler. Over time, I have found alternatives for most of the other things as they tended to have other problems as well, except for a word processor - I still haven't found one I like! I might even have run it on Nos because I sometimes need to run it in a MagiC vt52 window. I'm not certain.

There is another instance it might prove useful - where programs initially grab all the memory then Mshrink() the unwanted back to the system. Oddly, I have not had need to try this because the early fragmentation of my memory effectively acheives the same result.

Btw, Andreas recommends APPLICAT instead but being a user of MagiC 2 I don't have that luxury!

You certainly have an odd modem! There's just been a new stik
released. Give that a try first. Hopefully it will go away.

You have a rogue program in the AUTO folder or a rogue Accessory
program. It is crashing which causes the machine to reboot - catch 22!

Turn everything off. Leave the HD turned off and turn the machine on.
Once the desktop appears turn the HD on. Now dig out the floppy with
the hard disk software on it. Run the driver off the floppy. This
initialises the HD but does not go so far as letting it run the auto
and accs. Select one of the floppy icons. Now install drive 'C' (not
'c'). Open C:\AUTO and rename all .PRG to .PRX. Do similar ACC to ACX.
Finally hit reset and it should work because you've just disabled
everything. Finally, put all the names back one by one until the
problem comes back. That's the cuprit - delete / reinstall it.

Hmm, sounds just like a game cheat doesn't it? ;-)

1) Hope you've got the HD driver on a floppy! If you haven't
things are going to be tricky. First, try and remember what
gets printed as the machine boots and someone here should be
able to identify it and take it from there.
2) Obtain what is called a BOOT program. This runs first and
enables you to control what runs after so when this happens
again you haven't got to mess around doing the above.
3) The driver on the HD may be corrupted or maybe a bad sector on
the HD - this is *highly* unlikely and the possibility should
be ignored until all other options are exhausted.

To explain what is going on a little clearer ...

When the ST boots it looks in C:\AUTO and runs every single program in
there which ends with .PRG - this is typically used for system
extentions and such like. The order in which they run is usually
important. The operating system goes through them in the physical

order it finds them on the disk _not_ the order you see them. You need a special program to see the real order (obtainable off the net). The reason for not copying them somewhere else to disable them is that changing the name does not alter the order, copying or moving them would and stands a good chance of producing a similar result to the one you're experiencing, as would the addition of any .PRG which is not designed to be in there.

Once it has done that, it looks in C:\ for anything ending with .ACC and loads them. These are the accessories which typically appear in the menu on the left. Again, accessories have to be specially designed for the job. The order of these is not important you'll be glad to hear.

In most cases you will find the hard disk driver on the HD is located in the same place as the accessories (C:\). Sometimes it is invisible to you, sometimes not. The hard disk tools will be able to locate it though.

(Posted and mailed)

Douglas, if the person in question cashed your check, and the merchandise doesn't arrive within a reasonable time, it is up to the shipper to trace it. Failure to do so is tantamount to Postal Fraud - a Federal offense in the USA. I suggest trying to keep it on a friendly basis, unless you were dealing with Ralph Mariano - in that case, send him a certified, return-receipt-requested letter demanding either the goods or a refund within ten days; then file a complaint for postal fraud with your local post office if the results don't appear.

We don't need this sort of thing within the Atari community. If there's someone preying on Atarians, it behooves us all to surgically excise the thief.

3415. Welchers & my first auction

Newsgroup: comp.sys.atari.st
Date: 1996-11-25 00:00:00 UTC
From: smedley@gte.net
Message-ID: <57ci1i$9s0@news1.gte.net>
Source record: 133305
Cross-posted to: rec.games.video.atari,comp.sys.atari.st

Well I have completed my first auction, and I am coming away from it feeling burned. Perhaps we should start an official Internet auction blacklist, so we all know who should be excluded from bidding as a matter of protecting ourselves. And my nominee for the first person to put on this list is:

Walt Whitney wjwhitney2@aol.com

He bid $40 for a hand scanner & software in my recent Atari computer auction. After the auction was complete (six days after his winning bid was made) he responds to my request for shipping address & payment arrangements by asking if it is a color scanner. It wasn't, and he refused to go through with the purchase.

In all honesty, he was not the only person to back out of bids. I had two others. But at least they were decent anough to do so while I was still accepting public bids, rather than wait until the auction was completed.

Does everybody else around here go through this when they have an auction? Any tips on how to avoid losers like wjwhitney2 in the future?

You can't avoid people backing out. What you culd do is
have a highest and second-highest bidder, so that if the
highest drops out, then the second-highest gets the chance to
buy it. (Not much use if you only have one bidder tho!)

Tim

This is easily done. In the header of your followup, add the following line
(it must come BEFORE any blank lines):

Followup-to: alt.flame

Anyone posting a followup will be sending his article to a location
guaranteed to garner email flames, and it won't show up in csas!

You can direct followups anywhere you like, but that's one of my favorites.

3420. TOS images and Gemulator

Newsgroup: comp.sys.atari.st
Date: 1996-11-25 00:00:00 UTC
From: Ronald Hartwig <Ronald.Hartwig@Informatik.Uni-Oldenburg.DE>
Message-ID: <57d1u9$40l@news.Informatik.Uni-Oldenburg.DE>
Source record: 133310
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st,comp.emulators.misc

Hi,

thanks to all who answered my questions. You all were a lot of help.
So that is how I got it working by now:

Get the TOS image (I now try 2.6) and name it "Magic_pc.os" and let
gemualtor find it. That's all.

The file selectors now work fine. Speed is amazing.

Just two little problems are left:

1) The TOS I got is in english. But I need the Umlautes "ï¿½ï¿½ï¿½ï¿½" and so
on. Does anybody have access to a german TOS version?

2) Funny enough I can read all files from all partitions but GfA will
not detect the EOF. This problem appears ONLY with files imported from
the original ST. When I create the files with the gemulator it works
fine. Maybe I need ti add a (DOS?) EOF character myself. Any ideas?

But thanx anyway for all your help

Ronald

ps: One thing I noticed was that the gemulator won't start up properly
when the printer is absent. Maybe that's a feature and no bug. I still
wonder what this black bar means which continues to get smaller during
boot up of TOS 2.6.

My system has to run unattended, 24/7 - that means I'm going to lose (based
on your figures) about 618k per day, or more than a meg every 2 days. That
is unacceptable operation.

Memory leaks are serious bugs! Any program which is currently under
development which suffers from memory leaks should be critically examined
and reworked to solve the leak!

I haven't worked out the file format details, but they're easily made on a PC by stringing together a series of GIF "frames." Once I have that little detail (how to indicate a pause, and so on) I can write a TOS app that will make animated GIFs.

Anyone know where to find the file specs?

Apparently, APPLICAT is the better solution (earlier article from
Andreas) but if like me you've not got it then just run it like any
other .TTP program:

limitmem [executable_filename] [maxmem_in_bytes]

Tom.... do you have a fax machine? If not, use one a friend or business acquaintance has and fax the pages you want to yourself using your own phone line and STFax. Use STFax again to convert the incoming FAX file to an image and voila! you have a full page image to OCR. I have also found OCR14b.PRG to be an excellent tool for OCR work. It can be found on HENSA or umich.

Keith Brooks

PS.... If you must have GDPS driver, there is a shareware, english rsc file available on HENSA or umich... last version I think was 2.5 or 2.1 or some such. It however only sees SCSI devices so if you're using a cartridge based hand scanner, you will be out of luck. If you are getting a serial/parallel based hand scanner, you'll probably have to buy commercial software.... GT Look II is what you need and you can get that from Chris Krowchuk at Computer Direct.

Keith

Replace the MAGIC_PC.OS file in your root directory. It's not in the GEMSYS
folder.

There is a great package called MIDI SPY by Code Head Technologies that does just this and more! It can be run as an ACC or a PRG. It can handle MIDI 0, 1, and 2 files as well as its own song formats. It also acts as a full time midi buffer...meaning you can doodle on your keys at any time and it'll keep it for you. You can use it as a simple sequencer...recording one track at a time if you like. Quite a few nice options like "automaticly merge type 1 or 2 files at load up if you want...and more". I use MIDI SPY with CAB too...since I can set it up to automaticly start playing when it's launched and handed a file to open. It's very solid...I use it every day and have yet to find a bug or glitch...and it hasn't caused any problems with my other tsr and ACC set up.

I'm pretty sure you can get a demo of this at umich and hensa archives. You can buy it from Toad (sales@toad.net or http://www.toad.net).

3430. NED PLAYER v2.2

Newsgroup: comp.sys.atari.st
Date: 1996-11-25 00:00:00 UTC
From: Sumbera Petr <xsumbe00@stud.fee.vutbr.cz>
Message-ID: <Pine.BSI.3.95.961125084050.20743A-100000@fest.stud.fee.vutbr.cz>
Source record: 133341

I have just done new version of NED PLAYER v2.2.

You can now get N_PLAY22.LZH on my page:

http://www.stud.fee.vutbr.cz/~xsumbe00

-What it is? Here is small info:-----------------------------

NED PLAYER 2.2
Simple sample player for ATARI STE/TT/FALCON. Now you can
change smooth frequency from 6 to 25 kHz in mono (SW MODE).
And it automatically recognize some sound formats
(SAM,DVS,SND,AU,WAV).

-features:---

- It runs as ACC or PRG
- You can use Drag & Drop
- unsigned -> signed -> unsigned (CHANGE FORMAT)
- MultiTOS compatible
- Iconize (MultiTOS + new AES / MagiC)

- SW MODE (smooth frequency change from 6 to 25 kHz) (v2.0)
- Automatic file format recognize (v2.0)

- Bug fix with FALCON and MagiC (v2.1)
- Keyboard commands (v2.1)
- Shell parameters (v2.1)

- VA_START protocol *NEW*

-file formats:---

It recognize and play this sound formats:

- SAM (ATARI 'STOS Maestro')
- DVSM (ATARI Falcon 'WinRec')
- SND, AU (Sun, Mac, NeXT)
- WAV (PC)

Harry Jacobson (harryj1@voicenet.com) wrote:
: Hi ,
:
: Sorry if this has been covered a million times...
:
: I was an Atari ST user since '85 or so... Still use it exclusively
: for midi <c-lab > but have moved to a pentium for all else <got tired
: of looking at German>
:
: 1. Is there a driver and tools program ported to the ST for ZIP drives?

Yep...HD-Driver does the trick...
You need at least one device in your SCSI chain that provides SCSI
termination power if you happen to be using the ICD Link ASCI controller
since the ZIP doesn't provide termination power. If you aren't using
the Link, or you have other SCSI devices on the chain...no problem most
likely. If you do use the Link...and no other device provides termination
power...you'll need to build a special cable to get some power to your
Link.

: 2. is there a good emulator for the PC to Atari and Atari to Pc ?

Yes...and no...an no again...
Gemulator and MagiC PC are pretty good STe emulators for Windows 95.
Don't expect to run Notator on them however...as they don't have
support for the Dongle...and Notator/Creator require a TRUE Atari TOS
and AES since they hook directly into the desktop. It is possible to
install TOS roms in your PC for use with Gemulator if you have a free
ISA slot. Should someone come out with an Atari ROM port for the PC,
and you installed a TOS ROM card...then it "might" be possible to
run Notator/Creator on a PC...but as far as I know, it can't be done
at the moment. I think there is also an ST emulator for the PC called
Janus, but I know nothing about it...sorry.

On the Atari to PC end...there are a few pretty good DOS emulators
such as AT-Speed. It's a 286 16mhz processor card that sits atop
your Atari's M68000. It'll run windows...and quite well on the older
applications...but for modern software...save your money. Also in
existance (but pretty hard to find) is the Super Charger...it's based
on an AMD 8088 processor that's been hacked to run most 286 compatible
software (such as windows 3.00 in protected <that's single tasking> mode).
I don't think any one still makes the AT-Speed for the ST/STe, but
a few places still have some in stock. There might have been a few
16mhz 386 cards made for the ST...but I've never seen one. Since most
PC software these days requires a VGA resolution to even get it loaded...

it's really tuff to get an ST to do dos/windows. You best chance is with a Monochrome monitor emulating a CGA Hercules mode...but then there's no color! Finally, there is a company called Tech Specialties that once produced a custom Case and some interfaces that would allow you to slap both an ST and PC mother board into the same case and wire them both into the same hard drives, modems, monitors, and so on so they could share hardware. They've most likely got some of these cases/interfaces left over.

Oh, what are you looking at in German that you can't find in English? So far I've had good luck with finding English versions of the really good German stuff. Oh, and you can always hack the RSC files and change it over to English if ya can't find a true english version.

3433. Speech synthesiser

Newsgroup: comp.sys.atari.st
Date: 1996-11-25 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <961125Z082914.518dave@mbha.demon.co.uk>
Source record: 133344

Does anyone out there know if there is a speech synthesiser for the TT? What I have in mind is a program which will read from a text file and send out synthesised speech (quality doesn't matter) to a standard format sound file (wav, avr or something).

Is there such a beast? Does anyone know how to program such a beast?

Thanks in advance for any help with this...

Hi all,

So which is it... Geneva or MagiC?

I'd like to leave fax software running in the background whilst I use wordprocessing and DTP s'ware. I also use Oasis for E-mail and newsgroups, and CAB/STik for research on the net.

I'm running a 4Meg STE with a 540Meg HD and I already have Neodesk 4.

Suggestions greatly appreciated :)

Ali.

3436. GEMvelope 2.96

Newsgroup: comp.sys.atari.st
Date: 1996-11-25 00:00:00 UTC
From: cysco@tyrell.net
Message-ID: <E1ErCC.E3H@tyrell.net>
Source record: 133347

***** GEMvelope 2.96 *****

Finally, quick and easy printing of envelopes on your printer!

GEMvelope allows you to print envelopes on almost any printer. Laser (and most other) printers will not feed an envelope so that you may print across it. GEMvelope solves this problem allowing you to print even legal size envelopes on virtually all laser printers and dot matrix printers. GEMvelope was developed to work hand in hand with most word processors and databases to provide a complete solution.

GEMvelope Features:

* Import allows extracting an address from a letter in almost any work processor format (or from the GEM/Atari clipboard).

* Mail merge/browse allows printing one or many envelopes with an address imported from a database file such as CardFile by Gribnif Software.

* Adjustable positioning for different size envelopes.

* Load-able and save-able addresses and configurations.

* POSTNET bar code printing for speeding your mail. (Will also save two cents per letter on the future according to the United States Post Office).

* A desk accessory version ideal for using from within program like Tracker/ST.

* GEMvelope uses GDOS and includes FontGDOS with drivers for the following printers: Atari SLM804/605, HP Laserjet compatibles, HP DeskJet, Epson FX80/LX compatible 9 pin, Epson/Panasonic compatible 24 pin, NX1000, Okimate 20.

* Includes Swiss, Dutch, and Typewriter fonts. Fully compatible with scalable and bit-mapped GDOS fonts.

* Compatible with all Atari ST(e)/Mega ST(e)/TT/Falcon030 computers with 1 megabyte of RAM. Atari SLM laser printers require 2 megabytes of RAM.

==========
Purchasing and Upgrade information:

New owners: $30.00 plus $3.00 shipping and handling.

CardFile 4 owners: $20.00 plus $3.00 shipping and handling.
Please send original CardFile 4 disk. The
disk will be returned with your GEMvelope
package.

From previous versions: $5.00 plus $1.00 shipping and handling. This
includes versions by Synergy Software.
Please include your original disk.
If you would like a printed manual add $5.00
plus $2.00 shipping and handling.

World Wide Web: http://www.tyrell.net/~cysco/brisk.htm

(C) 1996 BRiSK Software

==========

List of new features and problems corrected in GEMvelope 2.96

1) Under Geneva, it is now possible to get to the other windows as
well as GEMvelope's menu.

2) When pasting from the clipboard, if the last line doesn't end
with the carriage-return line-feed sequence, the last character
will no longer be entered twice.

3) Can now be setup with the Install Application feature of most
Desktops (including Atari's built-in Desktops). The extension to
use for the desktop should be GLP. Please consult your user
manual for the Desktop you are using for instructions on how to
Install Application.

4) With Cursor to Address selected, the cursor will go to the first
line of the address instead of the Return Address. This feature
is saved into the GLP file, so you must load, set the option, and
save any GEMvelope GLP you wish this option to be enabled for.

5) Added a Clear button to clear the the address or the return
address. If the cursor is in the return address, it is cleared,
and the cursor goes to the first line of the return address. If
the cursor is in the address, it is cleared, and the cursor goes
to the first line of the address.

6) When deselecting Print Return Address, if the cursor is in the
return address it will be moved to the first line of the address.
If the cursor is already in the address, it will not move.

7) Changed all the arrows used to change the various offsets to either a plus or a minus, depending on whether the value will increment (+) or decrement (-).

8) Added a communication protocol for other programs to communicate with GEMvelope. This has been added to Gribnif's CardFile as of version 4.08.

9) When pasting, GEMvelope will paste in the return address, if the cursor is in the return address, or it will paste in the address, if the cursor is in the address.

10) All menu items under Edit are now functional.

Copy will copy either the return address or the address based on the cursor position, to the clipboard. This makes it possible to get addresses out of GEMvelope.

Cut will copy either the return address or the address based on the cursor position, to the clipboard. This makes it possible to get addresses out of GEMvelope. Then, whatever was copied to the clipboard will be cleared and the cursor will be placed on the first line.

Paste will paste in the return address if the cursor is in the return address or it will paste in the address if the cursor is in the address. This works like the Paste button.

Delete will clear the address or the return address. If the cursor is in the return address, it is cleared, and the cursor goes to the first line of the return address. If the cursor is in the address, it is cleared, and the cursor goes to the first line of the address. This works like the Clear button.

Chirs has stated that they have indeed ran the 060 at speeds much
greater
than 60mhz (I won't embarrass him with the speed he quoted, guys a
hacker
at heart:). There was claimed to be software problems with bus speeds
as high as they were running. If I ever get the cash saved, it sounds
like
i'll be playing with the clock as well from what he said. I'm sure that
they will not use that as a selling feature however. They are much more
professional than that:)

: : : is no blue. This makes all that should be black, yellow (red+green).
: : : Hard to read to say the least.
: : : The roms are labeled 306E-Uxx. The sys info prg. reports a UK version
: : : and os_conf has $7 in it.

: Hmm, if i remember right there was something with the set_color
: routine in the patched pak3-tos306. I think they needed space and
: removed it. Since most people tuning their hardware are using
: nvdi for further speedup they get a working set_color in nvdi
: and don't miss the original one. Perhaps i'm wrong.

Some new BIOS-routines have been removed. So no color can be set by the VDI
which uses these BIOS-calls. I have written some new routines which correct
this small problem, but they are still not really published and currently
only available for the german TOS. BTW red+green+BLUE is WHITE.

The affected routines are vq_color, vs_color and v_opnwk. The BIOS-calls
have been removed because they are written for TT-Hardware which is not
compatible with the ST.

Hello,

I have a few questions concerning the connection of a CD-ROM drive to an
Atari.

1/ What is the difference between SCSI I and SCSI II, except the
difference in connectors?
2/ Is it possible to connect a SCSI II cd-rom drive to an Atari (not a
Falcon, but a MEGA ST 4)? No special Link or something?
3/ What would be best, a SCSI I cd-rom drive, or a SCSI II cd-rom drive?
4/ Would it be possible to connect a SCSI cd-rom drive to an Atari Mega
ST 4 when the Mega ST 4 doesn't have a harddisk?

THX for your help.

I think you confuse "PowerPC" with "PowerMac". There _are_ PPC
machines running Windows NT. There are PPC machines running MacOS.
There just isn't a machine that runs both, currently. This is not
a problem with the PPC but with overal machine design.

There are forthcoming machines with a new design that can run both.

>You would be hard pressed to write an entire OS on a RISC CPU now
>wouldn't you?
You said "apps" not "OS". It's true, and a bit of a bummer, that
large chunks of the OS are still 68k code. But most apps these days
are fully PPC (for PPC users) and fully 68K for 68K users. I know of some
that are mixed, eg Norton Utilities, however. Some new apps are
PPC-only, eg Corel Draw.

Surely it would make sense to code tasks that didn't
>require much ponies in 68k, and leave the number-crunching to RISC?

>An OS is hardly what you could call a number crunching application is it now
You've switched from talking about apps to talking about the OS. But
all code benefits from being PPC-native, not just FP.

>I am glad that we agree on Petey talking from the south end though!! :)
Never much doubt there really, was there?!

f > system for a successful working relationship.

what is most likely happening is you've got something on the
hard drive (like a program in your AUTO folder, or a desk accessory)
that isn't compatible with your computer. What I would suggest is
try to start the computer first, then when you get to the desktop
turn on the hard drive; then run your hard drive boot software from
your floppy (it should be on the Language Disk you got with the
Atari; if not you can download it from an FTP site or a BBS) so you
have access. Diable all desk accessories and the AUTO folder, then
reboot and see what happens. You might also want to try running a
diagnostic on your hard drive using a program like ST Tools (also
can be found on FTP or a BBS) and see if there's any problems with
the disk itself.

It could also be old age - a Megafile 30 is somewhat of an old
drive, and therefore can wear out. If so, try looking for a
refurbished drive mechanism (MFM?).

Failing that, invest in a SCSI host adaptor like the Link II and
get ahold of a SCSI drive like the Syquest EZ135 Removable, or get a
fair-size SCSI mechanism and build it inside a PC tower case. The
advantage to this is that you can run up to seven drives on a SCSI
chain, including CD-ROMs and tape drives - and SCSI will be a
standard that isn't going to disappear for a very long while yet.

Message-ID: <32999E40.5C76@utxdp.dp.utexas.edu>
Source record: 133361

I have an Atari 1040ST for sale.

- 1Mb RAM
- 1 internal 800K floppy
- 65Mb HD
- Two monitors: B&W, and color
- Dave Small's Spectre Mac emulator (with ROMs, of course)
- Original manuals & packaging
- Two joysticks, never used (can't remember the brand, but they seemed pretty nice when I bought them in 1989; cost me $16.00 each at the time, if that's any help...)
- Tons of shareware & freeware software (mostly from 1987-1990), both Atari and Mac stuff.

Asking 175.00, but I'll certainly consider offers. Hell, I have no idea what this stuff is really worth, so make me an offer, and I'll probably take it... Would prefer to sell all of it at once, but I'll consider selling it separately, too.

E-mail offers, questions, or comments to:
Greg Kreth
acgdk@utxdp.dp.utexas.edu

Thanks.

3451. Re: What's in tp306v14.lzh??

Blair Dean (Blair_Dean@isdtcp3.hwc.ca) wrote:
: I was looking through the indexes for ftp.tu-clausthal.de and I found the
: following set of patches:

: tp306v14.lzh 215105 patches for TOS 3.06
: (Highest date in the archive is Oct. 93.)

: Can anyone shed some light, and/or maybe some english readme files for
: this? What is being patched?

That is a very old version of TosPatch. As I remember there are a lot
of patches:
- fastload
- winx
- arrowfix
- harddisk waiters
- some bugfixes (e.g. correct disk boot patch)
and a lot more.

English manuals are currently not available.
But a newer version is easier to use and has english names for
the patches (but comments are still in german), so i hope it may
be understood by english users. For a rather long time I had not
released new versions of TosPatch so that no actual version of
TosPatch is available (per ftp). An actual beta-version is only
available on a local mailbox (DBox-Hamburg, Germany). A new release
will come out soon(er or later :-), but I cannot promise that I
can make it available per ftp, because I have no access to
ftp-servers.

If you have further question about TosPatch in general or about
some patches in special, just mail me.

MfG Markus

josk@stud.ntnu.no (Jo Even Skarstein) said:-

>> Same thing with MintNet and PPPD 2.2.0, it can't set speeds below 300
>>or over 38400. Over 38400 it prints an error message, but below 300 not,
>>it just do nothing. It also works correctly with any previously set speed.
>
>Are you sure about this? Have a look at my .ppprc...
[snip]
>/dev/ttya
>134

Yes I'm sure. But I use the PPPD included in the PPPKIT, it's perhaps
not the same as yours? Or I have (in /etc/connect, the same file as your
ppprc) no /dev/ttya statement, but directly /dev/modem2, it's perhaps
changing it's behaviour? Or you have MODEM.CPX or something else to set
the serial interface to 134 before PPPD is started?

To be sure, you could call the MODEM.CPX before and after starting the
PPPD, it will show the actual speed. If you set the CPX to 1200 bps, then
start PPPD with 134 in it's parameters file, the CPX will stay at 1200
(and the real modem line too, tested with "AT/") at least here at home...
If you do this, tell us the results please.

Bye! Bruno.

3453. MAGX.INF

Newsgroup: comp.sys.atari.st
Date: 1996-11-25 00:00:00 UTC
From: Ben Hills <ben@imperial.co.uk>
Message-ID: <848930152.8649.0@deborah.imperial.co.uk>
Source record: 133364

To all of you who followed my instructions of how to get a working
Atari Emulator and have thought - Where's MAGX.INF then.

Appologies to all, my mistake. MAGX.INF is supplied with the Magic PC
demo but it is stored on it's virtual hard drive file. So to get hold
of the MAGX.INF file you would need to run the Demo, but I think it
has now expired.

MAGX.INF is simply an ASCII text file like DESKTOP.INF and NEWDESK.INF
which contains a list of parameters for Magic. I do not want to post a
copy of my MAGX.INF as by doing so I may be breaching copyright laws and
I don't really wan't to do that!

Magic can run without MAGX.INF, but if you do this it will present you
with a file selector box on start up asking you to select a program to
start. Unfortunately the Magic file selector box doesn't work under
emulation so you would need a replacement such as FREEDOM.

The simplest thing to do is to create a MAGX.INF using a text editor
such as Windows Notepad and add this single line :

#_SHL C:\PATH\SHELL - Where PATH & SHELL point to the program
you wish to use as the Magic Shell,
such as the Gemini Desktop.

There are other parameters you can also include :

#_SCP C:\PATH - Path to Clipboard directory
#_AUT C:\PATH - This points to programs to run at
Start up (like AUTO folder)
#_ACC C:\PATH - Path to Accessories (*.ACC)
#_APP C:\PATH - List of Applications to run at
Startup.

I hope that this is now correct and helps a few people out there.

Once you have tried out the demo perhaps it would then be better to
go out and buy the full working version.

Yours,

Ben Hills.

3455. Re: STARTRACK-HDR-Sampler for Atari (VM

Newsgroup: comp.sys.atari.st
Date: 1996-11-26 00:00:00 UTC
From: stepwil@aol.com
Message-ID: <19961126221500.RAA15036@ladder01.news.aol.com>
Source record: 133116

Can you post a full feature set?

Features of the STARTRACK-Harddisk-Recording-Card

The STARTRACK-Harddisk-Recording-Soundcard is a 4Layer-PCB.
The Soundcard have digital Inputs and Outputs with switchable Cinch (with

transformers) and Opto(TOSLINK)-connectors and supports the
consumer-format
SP/DIF, but also the studio-format AES/EBU.
The Soundcard-Hardware recognize errors in the digital data-transmission
and shows
the type of the error in the STARTRACK-Sample-Editor.
Also recognize the hardware the samplerate of the digital input and show
(and use)
it in the Editor. The copy-protection can you cleared from SCMS(serial
copy
management system)-protected digital-sources on the digital input.
That's true even for all digital sources, also (i hope so) for all
studio-formats.
You can copy your own records with the digital-output without loss to
your
DAT/DCC/MD/CD-recorder. Thereby can you select if after the copy to the
recorder
is allowed: no copy, one another copy or full copy (without
copy-protection)
from your record.
The digital inputs and outputs working with 32, 44.1 and 48 kHz
samplerate.
The Soundcard have a Stereo 16Bit A/D-converter for analog sources and a
18Bit D/A-converter for the analog output. The converters (no cheap
CODECS
as in the Falcon or the most PC-Soundcards) are 64x oversampled
delta-sigma-
converter from the highly reputed company Crystal and are
firstclass-converter.
The high quality from this converters are certified by many
HIFI-newspapers.
A de-emphasis-circuit is in the Soundcard integrated and can controlled
by
the editor-program. That is necessary, because a few CDs (e.g. from
Heaven 17)
for noise-reduction the treble highly lift up.
The Soundcard have digital adjustable highend-volume-controller in the
range

-96dB to +32dB,channel-seperated adjustable in 256 steps for the
A/D-converter-input (record) and optional additional for the
D/A-converter-output (play).
The A/D and D/A-converter can working with the standarts 32, 44.1 and 48
kHz,
besides with 8/11/12/16/16.5/22.1/24 and 33.1 kHz and optional with an
external clock with the 768x,512x,384x or 256x samplerate.
Optional you can have a samplerate-clock-output (Coax-connector).
With it you can connecting the Soundcard directly with a CD-mechanism.
This is possible with a few High-End-CD-Players and prevent effectful
jitter.
The Soundcard is cabable for harddisk-recording without a DSP-processor !
The DSP is good for mixing and effects and can parallel working to the
Soundcard-Transfer. You can switch the DSP in the Input-section or in the
Output-section with the Sample-editor.

You can have a DSP-extension-card for the Startrack-Soundcard. This
extension
have a Motorola DSP 56001-33 (another prototype have a DSP 56002-40) and
96K of static-fastram (15ns). Optional you can have it with more RAM
(384K).
This DSP-extensions are full functional, still prototypes. I have the
DSP-PCB
in the Spring of '97.

You can make the Soundcard full musicstudio-compatible with the
XLR-extension-card. You have 6 XLR-connectors. The XLR-Analog-Inputs
(2 female XLR) and the XLR-Analog-Outputs (2 male XLR) working with
higher
studio-level (higher Volume-level). Additional, you have a AES/EBU
digital
input (female XLR) and output (male XLR), both with transformers.
You can switch the 3 digital Inputs (optical,cinch and XLR) with the
sample-editor (without rearrange the cables)
This XLR-extension are still a full functional prototype. I have the
XLR-PCB
in the Spring of '97.

The PCB is now released, and is (probable) available in Spring '97.

The price is ca. 1498 DM (deutschmark)

Thanx, Stephan

From: Steffin
Message-ID: <329aec7d.69918879@news.inet-direct.com>
Source record: 133166

Thanks for taking the time to read this message! This is about a lady that gave all she could to everyone, including me. Her name is Wendy.

When I was young she became my foster mother after my real mother had abandon me. Never having any kids of her own she became a foster parent. That I got to be in her care was probably the best thing that had ever happened to me. She had other foster children and even ended up taking care of many of the neighborhood kids.

Wendy is a lady that just never gave up and always gave more than anyone could imagine. I no longer think of my real mother as mother but rather Wendy as my only true mother. I know that I�m not the only one that thinks that way either. It wasn�t just kids that she helped it included the elderly, the disabled and the just down and out. What it takes to qualify for a saint is something I never found out, but I know it can�t be more than the things I saw this lady do for anybody. Even people that had wronged her could find themselves looking up at her while she helped them when they were down.

I�m 26 now and many of the things I�m telling you I never really realized until now. Since I was a kid she has helped me with everything from recovering from my mistakes to just being there to say "You can do it... It'll be okay." I've never been able to make a good attempt at trying to repay her for all she's done for me and I'm not alone. Many people just have taken for granted the things she's done for them.

I know by now you're asking yourself why I've posted this letter. Well, to be honest and straight with you it's because I would like your help. If there's one thing that I've learned from Wendy it's that, "We are our neighbors keepers." You know the golden rule, "Do onto others as you would have them do onto you." Anyway now Wendy is an older lady that is disabled and can't do as much as she used to. With the disability sometimes expenses can be too much. I now live in Arkansas and can't be of much help. With no real family I'd like to do something to try to repay all she done for me and many others.

That's were you come in. See if you can think back to someone that helped you no matter how big or small. Maybe it's someone you can't even remember or have lost touch with. For that moment picture Wendy and say, "I'd like to repay that kindness." I wish you would sit down and write a small note saying "Thanks for being the generous person that you have been!" If you could include something to help out. Maybe it's a five dollar bill, a book of stamps, even a dollar. Oh and would you also tell her the Steffin

sends his love. Her birthday is next month on the 27th and I m hoping
I can make this own a very memorable one.

Thanks for reading and if you choose to help God pless you.
Her address is

Wendy Mcghee

Sounds like a faulty boot sector on the HD.

Do you have some HD utility programs? If not you can find ICD and Supra o

1.Get the m/c booted without HD.
2.Connect HD
3.Run utility to "Install Driver".

This should re-write sector 0 and put a decent driver on the HD. You can then
access it and decide whether you want to re-format/re-partition.

Not at all. Au contraire I would strongly encourage getting rid of this crap whenever/wherever it appears. Gate-crashing is just bad manners - if we want to listen to these people we know where to go to find them. They don't have to butt-in.

h>
h> Well (sigh).... the problems have started all over again!
h> That is, I got 4 bombs every time I tried to boot from the harddisk
h> and nothing helped.

You're having a really bad time with this, Hallvard :(

Are you remembering my observation that CBHDCONF/Install fails unless CBHD is
already running as the driver? When you used it had CBHD loaded from the
floppy or had you booted up with the ICD driver?

I would come and do it myself but you are too far away :)

I've had CBHD in for about a month now - good performance, no probs.

That is wierd! Maybe it has something to do with the PC's partition that
Gemulator uses that are different from the ST's. I don't know exactly how GFA
detects EOF, but it may be flawed, which is causing your problem.

I guess you can do one of two thing:
1) Use a virtual hard disk image. (I don't know if the Gemulator Demo
supports this, but I think it does.
2) Read in and re-write the files under GFA Basic to fix that problem.

> I still

I think you might be better off getting an accessory that only sends the all notes off messages. I have a program that sends a note off on all notes on all channels and it overflows the MIDI input buffer on my Roland U220. Unfortunately, I don't know where to get such an accessory (short of writing one myself in FaST Basic which I haven't used for ages and produces massive accessories!)

John,

From what I understand from talking with STeve Kipker, Hughey has no immediate plans to set up his BBS. His Web page is supposedly going to be run from STeve's page. STeve has stated that he will be handling RatSoft BBS upgrades, but version 3.0 isn't available yet. If you need the number for STeve Kipker's BBS or his Web page URL, let me know.

>
> --
> cu,
> Bernd

I really have no interest in the personal aspect of this squabble, but
parties on both sides of the arguments are correct. The Power Mac, as
it is running System 7.x, is running in both emulation and native
modes. A good portion of the OS is still 68K code, that is true.
However, as Apple releases update after update, more of the OS becomes
native. This is visibally evident in System 7.5.3, which replaces
substantial portions of the emulated toolbox with native code. The same
is true of other technologies like QuickDraw 3D (which was ALWAYS
native), Open Transport 1.1.1, Open Transport PPP 1.0, etc. These
technologies are ALL operating system technologies, and they are, in
fact, native.

So the answer is: you're both right. The OS is not 100% native.
However, most of
the more frequently used routines are, resulting in faster execution
(look at the speed increase offered by OT 1.1.1 compared to MacTCP).

For the portions of the OS that haven't been converted, try running Speed Doubler. Their emulator works better than Apple's, and there is NO 68K chip that can keep up with a PowerMac running this configuration.

Well how about a better description of the stuff you are auctioning,
had you described it as B/W scanner then there would have been no
confusion?...well thats my opinion from the information you just gave,
and you did ask:)

BTW I think naming names like that is petty, small minded and
childish, especialy when you take into consideration that your lack of
description "could" be at fault,

Also, Greedy people who want to get as much money as they can out of
the ATARI community should learn to take the rough with the smooth,
try naming a price and selling instead,

And like I say....YOU asked for my opinion.

.

Cheers.............!ynoT

I read a while back in STF under the STOS section someone sending a tip in to read from an address (probably ROM) which is the input for mastersound 2, and so you can then make your own sampler, or trigger things with sound input.

If anyone knows what this address is, or manages to find the bit in the relevant
STOS help section in STF (as I recall it was about 1 year to 1.5 years back).

can they please mail me with it.... I would read it in here... but I seem to be so busy nowadays that I have little time to check :(((

thanks and ATb.

SoftWindows 95 works quite well, IMHO. It runs on a PowerMac and gives fast Windoze 95 emulation entirely in software. It's impossible to configure the darn thing, and the TurboLoad feature locks up half of the time, but other than that it works very well.

Hi again atarians!

Although most of this top hardware and software for the Atari ST,STe, TT or Falcon
computers has now been sold, there are still a few goodies remaining. All these items are in
pristine condition, boxed and with manuals. Why buy new when you can save pounds!

All items are now open to offers, please email me if your interested. P&P IS included in these prices (within UK). I can send outside UK for a small extra charge.

SOFTWARE

Calligrapher Gold (all plug-ins included): ï¿½35
Trueimage: ï¿½15
Studio Photo 24: ï¿½30
Script (macwrite clone): ï¿½30
Neodesk 3: ï¿½15
PixArt 2: ï¿½20
Twilight (screen savers): ï¿½15

PHASE-4 3D key animation studio package includes:
* Chronos 3D keyframe animator (with dongle and TT/Falcon versions):ï¿½65
* Phoenix 2 object renderer: ï¿½45
* ANM-link (interfaces chronos and phoenix): ï¿½20
* Cyber 3D edit/creation stuff (cybersculpt, cyberpaint, cybercolor etc):ï¿½20

Entire package sell for ï¿½100 including delivery!

HARDWARE
Vidi12 ST colour digitiser: ï¿½50
Graffiti genlock for Atari STE: ï¿½80
HAMA digital trilock genlock (for Any computer, NTSC/PAL): ï¿½200

Matrix TC1208e 2MB VRAM graphics card for TT
"THE" ultimate graphics accelerator and display card for your
TT computer. Incredible quality output, fits inside TT. Only
1 yr old and cost ï¿½1000! Complete with NVDI4 and more....
Sensible offer around 550 UKP....

TT fastram board (Systems SOLUTIONS) with 16MB fastram fitted!
offers around 300 UKP...

If interested in any of the above then please contact:

Not only that, but it ALWAYS gets the entire block; that's the way the loader works. The program MUST give the rest of the block back for it to be available to Malloc() etc. (This is transparent to C programmers, as it is handled by the stub program before main() is called.)

>
>This is my fourth week (Nov 13) and I've made about $42,000 TOTAL, and
>
>believe it or not the money is still coming in.......

Lets see, $32,000 in $1 bills in one week. That amounts to 32,000 letters. Since the post office does not deliver on Sundays, that means you received an average of 5,333 letters per day. If you sleep for eight hours a day, and spend the rest of it opening 5,333 letters, you would have to open one letter approximately every 11 seconds all day long without rest or food. You won't even have time to pay your bills or do other household chores. You'll also need to rent a truck to drive all that money to the bank and pick up your next load of mail because it will weigh about a ton. That means you'll need to cut into your sleep time and/or open the mail faster.

This is beside the fact that the bank, police, FBI, and the IRS will become very inquisitive over your repeated large cash deposits. Your home will probably be raided once or twice if not outright seized for probable cause of drug trafficing, money laundering/counterfitting, etc. The postmaster general will be after you to explain why you're suddenly getting so much mail. Somebody at the post office will go 'postal' because of the sudden manditory overtime to sort mail. The garbage collectors will fine you for

exceeding your weekly garbage limit, and much of it will remain on your lawn since they can't haul it all away. That means the city will be after you as well because of all the trash in your yard (not to mension that it hasn't been mowed in some time since you've been busy opening 5,333 letter a day). BTW, doesn't your finger get a bit sore and don't the papercuts hurt?

It goes without saying though, if you spam your message to 200 newsgroups, and only 15 people are dumb enough to respond and spam out another 200 messages per person, you will have ran out of news groups to continue the chain in. This is because there are only 3-4,000 newsgroups, not 10,000, and only about half of those see a significant amount of activity. Max profit for you is $15 income - $7 (investment + stamps/envelopes) = $8 net. Wow.

Your story is just a weeeeeee bit far fetched.

Before jumping to conclusions - strange things do happen. A couple of nights ago on the local news they reported that about 5000 pieces of mail was stolen from a mail truck that was on delivery rounds. It was the third reported occurence of theft off of a mail truck in the area in the past two weeks. (It was one of the Chicago neighborhoods.) If mail is being stolen off of mail trucks .... well, some mail could go missing. What a great world we live in. I hope they find the guy. Its a federal crime so carries very stiff penalties. Wayne

Hi, all. I decided to unpack my old 520ST, and man, it sure brings back memories. Anyway, not all of my disks have survived throughout the last decade, so I was wondering about a few of the games.

I know I'll catch holy hell about "copyrights" and such, so please be gentle. If the copyrights for these things are still active, forgive me in advance. But, if anyone has these games, and can point me to a site, or e-mail them to me, I would be forever grateful.

My favorite old games that are DOA are:

Carrier Command
Rogue
Sundog
Dungeon Master

My Star Fleet Academy still works, and it's a blast. I'm thinking of trading in my system for the Gemulator card. Does anyone know if these games will all work on a P90/16MB with the Gemulator 96 card?

TIA for any help or advice.

Not AFAIK. :^(That's what I was hoping to approach him about.
He even listed expanding the size of the landscape (fractal array)
as one of his goals for the future... It runs fine in ST-Low on
my Falcon, but unfortunately that's very low res, and it's running
plain-jane 68000 code. I wanted to see about maybe collaborating
to get it to run in 640x480x(16|256), using the FPU, and increasing
the landscape size...

I guess I can try his snaim-mail address, as probably nobody has
an email address for him.

I'm not sure what you're saying here: that it's impossible "to write
an entire OS on a RISC CPU"? That an individual would find it
prohibitively difficult? Surely it can't be the former! Entire OS's
on RISC CPU's have been around at least since the mid-80's. (SunOS,
Ultrix, IRIX spring to mind...)

Assuming you must have meant the latter, I'll grant that *I* couldn't
write an OS for *any* kind of CPU! :^)

Hi All,

The next Wessex Atari Group (WAG) meeting will be the AGM so attendance is required by as many members as possible. Any potential new members are also welcome to attend.

If you are an Atari owner and live in the South of the UK and don't know about us please feel free to attend this meeting or email Roy or I and one of us will get back to you with details.

Saturday 14/12/96
14:00 hours
Whitchurch Fire Station, Whitchurch, Hampshire

Leave the A34 to Whitchurch, at the mini roundabout in the center turn onto the B3400 to Andover. The Fire Station is about 100 metres on the left.

Yours Roy

Certain.

>My understanding of this was that programs are always loaded into the
>largest available block (can't remember where I got this though)

Correct. Here's a long winded explanation because I can't think of a
short one! ;-)

The operating hunts for the largest unused block and attempts to load
the new program into it. If it fits then it proceeds to hand over the
whole of that block (wanted or not) to the new program, thus any space
in the block which is not used to store the program and its data can
be used by the program how it wants. This is known as the transient
program area (tpa). When the program is initialising it calculates how
much of the extra space in the tpa it needs then gives the rest back
to the operating system (mshrink). The operating system adds this
unwanted memory to its list of free blocks, the largest of which will
be the tpa for the next program to execute. Unfortunately, there is
nothing to force a program to hand back the unused tpa and this sort
of behaviour is very bad in a multitasking environment because the
unused tpa it refuses to hand back may be the only free block the
operating system has.

At any time, any of the programs can request more memory (malloc) and
this also comes from any one of the free blocks. This time however,
the operating system does not hand over the whole block. It splits it
into two parts. One part is the memory requested - this is handed over
to the program, the other part is retained for subsequent memory
requests.

So, even if memory is really fragmented and the one currently being loaded only just fits into its tpa it can run quite happily if it requests memory from the operating system, provided one of the memory hogs is not running!

>>that I have lost 103K the last four hours.

Perhaps I should have mentioned that I was running PID 400-something
at that time? That's more than 400 allocations/deallocations of
memory which just *have* to fragment memory a bit.

>My system has to run unattended, 24/7 - that means I'm going to lose (based
>on your figures) about 618k per day, or more than a meg every 2 days. That
>is unacceptable operation.

What does your system do? If it's a BBS or something, just run it
under plain TOS and forget about it.

>Memory leaks are serious bugs! Any program which is currently under
>development which suffers from memory leaks should be critically examined
>and reworked to solve the leak!

Memory leaks and memory fragmentation are two different things. Leaks
is memory that's allocated but not freed, fragmentation is "holes" in
the free memory caused by the constant allocation/deallocation of
memory in modern OS's. Leaks is bugs, fragmentation is unavoidable, at least
with TOS. Sure, fragmentation can be reduced (I believe Dan Wilga has
tried this with Geneva 5) but not totally avoided. To achieve this
programs and dynamically allocated memory has to be physically
relocated ("Packed") now and then, this is very expencive and
difficult. I'd also doubt the reliability.

I'm not sure about this, but perhaps paging would reduce this problem?
If we had 4k (Just an example.) pages, then every block would have to be a
multiple of 4k and the only waste of memory would be max. 4k-1 pr. allocated
block. However, you won't get "large" (Several tens of K's) fragmented blocks
this way. But this requires additional resources (For storing and processing the
page-tables.) and would perhaps not be worth the effort.

Perhaps somebody (Andreas K., Dan W.?) can say if this is worth
looking into or just a waste of time?

BTW. if you want to keep an eye on how your memory is fragmented, try
Geir ï¿½yvind Vï¿½lidalo's excellent "Memory Lane" which you can find on
this guy's homepage (http://hinux.hin.no/~goev/). Much more visually
pleasing than MemWatch!

Newsgroup: comp.sys.atari.st
Date: 1996-11-26 00:00:00 UTC
From: Lee Rhodes <rhodesl@rtc-carlow.ie>
Message-ID: <329AFC37.3165@rtc-carlow.ie>
Source record: 133209

>Today, 11/20/96 marks the eleventh birthday of TOS v1.0!
Is there/Was there ever a definitive answer to what it stands for?
Tramiel OS? The OS? Probably a FAQ but I thought I use this opportunity
to write to the Atari news group as I used to own an old 520STfm (single
sided disk drive 512k RAM). Life used to be so simple.

Lee Rhodes,

Ireland

3504. More ST stuff F/S

Newsgroup: comp.sys.atari.st
Date: 1996-11-26 00:00:00 UTC
From: Mike LaRue <bandit@cdsnet.net>
Message-ID: <329BB71B.43E7@cdsnet.net>
Source record: 133210

I have a few things I do not use anymore,
All Itmes are for the Atari ST/STE/MEGA ect.

1040STE 4megs Excellent condtion! W/mouse $125.00
1040STF with mouse. $65.00
Supra 20meg HD complete system, Doc/disk $45.00
Drive master for duel external drives ST $10.00
External 720k (new mech) $25.00
Cordless mouse, I had to install new cable end! $10.00

HiSoft basic professional complete with box/doxs $15.00 obo
Specter128 with disk (no roms) $ 7.00

Cyber Paint complete with box and doxs $10.00 obo

All Items have been tested and are in good condtion
unless Stated.

Shipping, mostly by US Priority mail, had excellent
results. $3.00 to $8.00 shipping charges.

Payment, Checks take 8 days to clear, Money orders
are shipped same/next day, COD with $5.00 deposit
only.

Oasis Report - D.M.Brewood - Updated: 26/11/96 # 048 (posted not posted to
========== testers)

Comment list posted to the following official beta testers:

Colin Bernau (colbee@tyndale.apana.org.au)
David Greenhough (green@spirit.demon.co.uk)
Rod Keen (beta@gaiasys.demon.co.uk)
Neil Martin (trumpeter@cix.compulink.co.uk)
Gary Priest (gary@the-gap.demon.co.uk)
Dave Levi (dave@levihome.demon.co.uk) [Coder]
Phil Yeadon (phil@yeadontt.demon.co.uk) [Coder]
Boris D. Cahan (bdc2@po.cwru.edu)
Brian Baird (brian@sol.co.uk)
Nick Flintham (nick@flinny.demon.co.uk)
Paul Baker (pbaker@mettav.demon.co.uk)
Frank Charlton (frank@tachyon.demon.co.uk)
James Partner (jpartner@cix.compulink.co.uk)

Test Machine: Falcon 030 running MagiC4 with Thing, operating in 1152 x
832 x 16 colours.

This comment list will also be posted in the NeST N.SUP.OASIS_ICE*
message echo on a monthly basis.

* = Echo now gated with the AtariNet A.SUP.OASIS_ICE echo.

This data is based on the alpha version(s) provided on:

ICE = 08 October 2.10
OASIS2 = 08 October 2.10 (same issue as the package).
ICE_NET = 08 October 2.00

Package 2.01 was the first stable release version.

Package 2.05 released 03/06/96.

Package 2.10 is under alpha test by myself now.

New in ICE since the last beta OASIS2 release:
==========

2.10

- TCP checksum error problems fixed 100%
- News History file update for numerical format.
- All IP routines now in machine code.

- FTP now supports use of anon as well as ftp as a username.
- When an 'IP: Bad checksum' error message is displayed the ERROR_PING flag is not picked up and no ping is generated - fixed.
- ICE Usenet Window does not always display contents - fixed.
- Clock adjustment code implemented in ICE.
- Mail index system implemented.
- Neil Martins' "Incoming news keeps stalling with bad packet (IP) errors (PPP)" problem has been cured by installing HSMODA07 on his TT.
- IP: bad checksum bug when after starting a SLIP connection or bad packets when a PPP connection is started - fixed.
- When ftp'ing to Demon's WWW homepages ICE no longer gives error 550 (Access Denied) as soon as the home directory is entered.
- Error 008 in ICE when sending a 251k news binary and bringing in a 283k email. After error 008 crashes back to MagDesk, even throwing Thing out, and locks the Falcon solid - Fixed.
- Ftp upload options now active.
- When making an Ftp upload the filenames can be set to be in lower or upper case.
- Mail packet queue now limited to 7k held at both ends of the link.
- Ftp multiple directory redraw problems cured.
- R/S 'light' flickering fixed.
- Adjustment of receive data window size inceases throughput dramatically.
- TT memory problems illiminated.
- Telnet ANSI (colour) (inactive).
- SNOW beta released.
- Dynamic TCP window allocation.
- Two ftp bugs fixed.
- News routines turned partailly into machine code.
- Ftp division zero bug fixed.
- Error bell operation cleaned up.
- ICE loading dialog added.
- Event handling system speeded up.
- CPS indicator in Socket Window.
- SLIP decryption routines converted into machine code.
- Routines tweeked and speeded up.
- Text in the viewer window now uses the full width of the window and does not wrap unless needed.
- GMT / Groups file timing bug fixed, resulting in the hour of missing news, and not seeing your own posts bugs being eliminated.
- ListNews bugs fixed.
- Get new newsgroups routines fixed.
- SMTP/ESMTP interface fixed.
- No node name now supported.
- MagiC 5 compatability.
- High resolution font code added in.

- Telnet now fully working ofline.
- Get all headers bug fixed.

New in OASIS2 since the last beta OASIS2 release:
==

2.10

- Font size controls added to Oasis.
- Complete MIME send routines (Partials created Automatically) with
iconic control panel.
- GMT offset system recoded - now does not reset system clock.
- Send MIME bugs fixed when using external editor.
- Not enough disk space when unbatching news no longer results in the
incoming mail being deleted.
- MIME partial size selectable.
- 'Mail To:' support added for MIME.
- In the Outbound window - Window header should changed to show 'outbound'.
- Time / Datestamping of files.
- MIME partials marked as expired once processed into a single MIME.
- 'A' flag now indicates in the mail window that an automatic Oasis
function has occured.
- Local time shown in the newsgroup details dialog, but GMT still written
to the groups file.
- Spell checker added to OasisEd2.
- De-fragging system built in to Oasis to stop problems when unbatching
news.
- Implemented use of SHIFT HOME to move cursor to the bottom of the mail
and news windows.
- Two bugs from: Stephen Mulrine <robotron@moroder.demon.co.uk> fixed:
- If an outgoing mail message has a line beginning with a dot, the dot
will vanish in transit.
- If an incoming mail message has a line beginning with a dot, an extra
dot will appear (I assume).
- Defragging routines debugged.
- Resources updated.
- Newsgroup file size shown in the Group Maint window (Kbytes).
- MIME send to multiple address bug fixed.
- Support for mail index implemented.
- Notification of new emails for each user.
- Mail save bugs fixed.
- Overview bug fixed when adding users to yellow pages from news.
- Reply to Thread bug fixed.
- Window handling bugs fixed with respect to font window.
- Folding bugs fixed.
- Crashing after selection new user after opening font window fixed.
- Trim bugs in MIME fixed.
- EOF mail indexing bugs fixed.
- Anon-Server support added.
- Anon support added in for news.
- Blank line bug in Anon headers fixed.
- Folded lines in headers now end with a comma to eliminate the parse
errors on e-mails.
- News posting problem (introuced in 24/8/96 version) fixed.
- Group Details dialog performance improved (not changed).

- Add new groups bug for multi-users fixed.
- Oasis.news group added for storing copies of outbound news.
- Group details dialogue reworked in operation.
- Path change bug after running a FROND - fixed.
- MIME forwarding drastically improved.
- Ability to 'guard' the 'oasis.news' newsgroup.
- ALT M now works for Newsgroup Headers.
- MIME support added in fully for all aspects of Oasis (Outgoing, etc)
- MIME window size reduced.
- When reading news post new now works.
- References bug fixed.
- Icons added to info line.
- MagiC 5 compatible.
- oasis.archive newsgroups added for archiving news.
- Multi-user support for oasis.news and oasis.archive.
- Multi-user support for Outmail.
- Unbatch routines improved.
- Threads can now be archived.
- New pop-up system implemented for Mailshots.
- Scrolling pop-up added to reworked log on dialogue.
- Save defaults added to log on pop-up.
- Ability to retrieve articles now can be toggled.
- Unbatch decrement counter added.
- Save logon defaults bug fixed.
- Upgrade program now handles upgrades from 2.05 to 2.10
including all inbetween alpha versions.
- Initial loading dialogues added.
- If the system runs out of windows Oasis prints a warning and exits
cleanly.
- Guarded/Unguarded bug fixed for time limit of zero.
- To be fixed within 24 hours: Refile mail pop-up corruption, mime
extract.
- To go to the top of the list: MIME reading in news.

New in ICE_NET since the last beta OASIS2 release:
==

1.26

- Mydials removed and in house code generated.
- Windows style pop-up's added.
- Frond Support added.
- Font size controls added to Oasis.
- Dialogues reworked.
- Unbatch & Post Local flag bugs fixed.
- Support for ftp upload added.
- Incompatibility problems with OASIS fixed.
- Support for Anon-Servers added.

- Unbatch size added.
- Recoded using menu's.

New in Spider since the first official OASIS2 release:
==========

- Basic code evolving.
- Code written to display raw text without HTML tags.
- Now coded in machine code.
- 'Entity' decoding added.

List of possible bugs discovered in ICE so far:
==========

- Fix PPP packet bug where carrier drops.
- ICE does not exit straight away when selecting Quit in the menu if the various windows are iconified.
- News window blanks out after dialer window has closed.

From Boris:

1) PPP no longer works for me. Fortunately my provider has slip as well, which does work with the same program just fine. The provider, which thank god is free, assures me that ppp is OK. Unfortunately, when I downloaded, I lost the last version, so can't go back and check it. It loads ok, but when I kick news, I get two bombs, and it dies, although I can still access the menus and quit.

Reply: Problem here is system is trying to kick in link quality monitoring system and is not negotiating. Fix will be done.

2) SNOW works only in the sense that it comes up everytime I load ICE, but other than looking pretty, does absolutely nothing! If I change speeds with it, I get the old speed. If I start with another speed, it stays there after it runs.

Reply: SNOW.PRG must sit in /FRONDS/ directory and run from desktop, then options set and then the config saved. Will then initilise properly. Program must be called SNOW.PRG.

3) Why does news always give "duplicate file" messages? Is it because of GMT vs. DST in the system? I notice I am the only beta tester in the states, and thus not on GMT. (Oops, one of two)

Reply: Can you clarify exactly where the error occurs and give examples. Need to know: load in GROUPS or GROUPS.DAT file and record nine digit time number against newsgroup. Access news and after finishing go back into file and get the revised number. Record time of access in GMT and send to Dave.

From Colin:

1) All versions: IP Checksum error on connecting.

Reply: Drop DTE speed from 115200 to 57600.

2) All versions: : TCP Checksum errors during news downloads, often stalling completely after up to 16 errors reported.

Reply: DTE speed should solve this.

3) Mail still inconsistent - often only accesses first item, and often downloads none. I'm rather loathe to try it at the moment - last time it did download 4 items, they were deleted! Yes, I am using the latest versions!

Reply: BUG fixed in 2.06.

4) FTP seems to have gone downhill with the latest versions. With 2.01, I was impressed with the speed of connection, retrieving directories, and downloading. Currently, this is much slower, often stalling half way through getting the directory. BTW, I _am_ using HSmodem7, have tried 6 as well, and now also using SNOW.

Reply: Again DTE lowering will remove errors - bad packets not reported for FTP

List of possible bugs discovered in ICE_NET so far:
==========

- $GET_IP seems to be sensitive to spaces - it wouldn't get my IP address because I'd missed the space which is sent after the string it watches for.. Unfortunately Ice_Net won't let you put a trailing space in the string lines. [Brian Baird: 90:100/113]

Reply: Can you please send your configs again please?

From Colin:

I've had trouble also with the recent versions of ICE NET, which wouldn't save my configuration, but had to go back to old versions to set up again after the crash.

Reply: No problems seen here, recommend checking out your hard disk.

List of possible bugs discovered in OASIS2:
==========

- Daily Net window does not resize to accomodate the size of the newsgroup names [Falcon only].
- When adding a group of new newsgroups the first group is sometimes not added into the groups file, or is added with a garbaged description.
- Exporting MIME test to a file results in the header only being exported.

From Boris:

1) When expiring news, it will often (not always, tho') crash with two bombs after expiring.

Reply: Known problem with memory, presumed fixed in 2.10.

2) I am not POSITIVE, but I suspect that Oasis is slowly trashing my disks! I keep getting orphan files on the disk where Oasis resides. I have cleaned them out, run Oasis, and then SOMETIMES there are more! It may be related to the bombs when it crashes, leaving partial files.

Reply: Recommend clean up hard disk, check FAT with Diamond Edge. Not responsible for operating system problems.

3) I think it would help if the expire, and mark as read menus came up with "group" marked as the default. I like to mark with the keyboard, rather than the mouse, and I am forced to use it to mark the dot each time.

Reply: No, each user has their own preferences, and Phil's rule!

From Colin:

1) I reinstalled the complete package two days ago, since after giving me errors 22 and 11, Oasis2 overwrote the whole partition!! Since the new installation, it seems to have run better, still with the above problems, but not as often, and has also locked up with an error 65.

Reply: Error 22 is file already open, 11 is not GFA basiC 3 program, suggest hard disk errors,

The following other files are maintained by myself for the OASIS2 / ICE system:

FAQ.TXT - Frequently Asked Questions.

These will be posted by request only:

NEW_ICE.TXT - ICE Net Development History.
NEW_IC2.TXT - ICE Development History

What is ever better? Anyway, the main difference might be with the
expansion buses, Medusa uses ISA and Direct and Hades uses PCI.

Have had a great deal of dfficulty in locating a source of compiled Linux binaries for STonX. I would prefer the latest version (0.65?). Does anyone know where I might obtain these?

Also, is there a more appropriate newsgroup for this question?

The compiled version will depend on the TOS image you want to use as they
live at different addresses. I have one which works for v1.06 which I could
either email to you or let you grab it off my machine using FTP. The version
I have is ELF format not a.out though.

Have you tried compiling it, it is fairly simple, with only a few things
that can go wrong. The hardest thing seems to be getting a correct TOS.IMG!

> Also, is there a more appropriate newsgroup for this question?
Don't think so. Besides, most people here are very helpful :)

: make animated GIFs.
:
: Anyone know where to find the file specs?

Just do a search on Lycos on GIF89a Specifications. The animated
gifs used on websites are basically standard gif89a's but from what Ive read
the comment string is something which Netscape has used as an identifier.
You could even go on the GIF87 specs, since animation sequences have
existed since 1987. Nifty.

3514. TT High w/svga?

Newsgroup: comp.sys.atari.st
Date: 1996-11-26 00:00:00 UTC
From: dogmeat@netcom.com
Message-ID: <dogmeatE1GKAC.52A@netcom.com>
Source record: 133247

All:

OK. You all know that TT's come with 3 non-ST video modes. The
highest resolution is monochrome mode at something like 1240x960.
However, only special monitors could use this mode.

Why I understand that the average VGA monitor would not support
1240x960 certainly my NEC SVGA monitor will. Can I trick or hardwire mys
system into selecting TT High resolution?

If so how?

Hi Ben,

it depends if you are comparing Hades060 to Medusa060 to DirecT60.

The DirecT60 is for the most part identical to the Hades060. The Medusa
060 is a different beast completely.

The main difference between DirecT60 and Hades060 is Anglicization! ;-)

Join our DirecT40/T60 mailing list and get all the info.

http://compdirect.com/directions/

All the best,

Chris @ Computer Direct

Well,

I for one hope that it comes to fruition! I am concerned about the speed announcements but this is probably a translation error more than a mis-leading announcement. I am more concerned about the OS, how compatible is it? Does Cubase run on it? Does SoundPool product run on it etc.

A faster Falcon is cool, but a faster non compatible Falcon is not so cool!

Afterburner is a screamer for Falcon owners, but the combined price of a new MKX and AB040 is creeping close to DirecT60...so, if this machine does prove to be real and compatible, there is no doubt that we will try to bring it to America.

All the best,

Chris @ Computer Direct

If you can direct me to a good compilation of borders/frames (maybe on CD?) I would be grateful.

Jeff

: TOS
: programs ignore Geneva TOS completely and write all over the screen. It
: works fine with MagiC. All suggestions gratefully received.

You need to define gnva_tos.prg in the gem.cfg file of Geneva as the application to launch your tos programs into. I can't remember exactly what the varable is called...check your help files :) Also, get the latest version. No problems here :)

Brian
